

INDEXIQ ACTIVE ETF TRUST

IQ Ultra Short Duration ETF (the “Fund”)

Supplement dated February 29, 2024 (“Supplement”) to the Fund’s Summary Prospectus, Prospectus, and Statement of Additional Information, each dated August 31, 2023, as supplemented

Capitalized terms and certain other terms used in this Supplement, unless otherwise defined in this Supplement, have the meanings assigned to them in the Prospectus, Summary Prospectus and SAI.

Please note that the disclosure and information contained in the supplement filed with the Securities and Exchange Commission on October 19, 2023 with respect to the Fund (the “Prior Supplement”) is hereby replaced in its entirety and superseded with the disclosure and information below. All proposed changes described in the Prior Supplement will not take effect and shareholders should disregard these previously proposed changes. As further described below, the Fund will now be liquidated.

Notice of Liquidation of the Fund

The Board of Trustees of IndexIQ Active ETF Trust (the “Trust”) has approved the liquidation and dissolution of the Fund on or about April 29, 2024 (the “Liquidation Date”). In connection with the liquidation and dissolution of the Fund, the Fund may depart from its stated investment objective as it winds up its operations and liquidates its portfolio.

April 22, 2024 is expected to be the last day shares of the Fund will be traded on NYSE Arca (the “Exchange”), and the last day that the shares of the Fund will trade in the secondary market at market prices. Shareholders may sell their shares prior to the market close on April 22, 2024, and may incur customary transaction fees from their broker-dealer. After market close on April 22, 2024, shareholders will not be able to transact in Fund shares in the secondary market at market prices. Shareholders should be aware that after April 22, 2024, the Fund will no longer engage in any business activities, except for the purposes of selling and converting into cash all of the assets of the Fund. During this period, the Fund may hold cash and securities that may not be consistent with the Fund’s investment objective and principal investment strategy. After the close of business on April 22, 2024, the Fund will no longer accept creation or redemption orders from Authorized Participants (as defined in the Fund’s Prospectus and Statement of Additional Information).

On the Liquidation Date, a distribution will be made to any remaining Fund shareholders of record consisting of cash equal to the net asset value of their shares as of that date, after the Fund has paid or provided for all of its charges, taxes, expenses and liabilities (the “Liquidating Distribution”). Such Liquidating Distribution received by a shareholder of record may be in an amount that is greater or less than the amount a shareholder might receive if they sell their shares prior to market close on April 22, 2024. Additionally, the Fund must declare and distribute to shareholders any realized capital gains and all net investment income. These dates discussed above may be changed without notice at the discretion of the Trust’s officers.

For shareholders holding shares in a non-tax advantaged account, the automatic redemption of Fund shares on the Liquidation Date will generally be treated as a sale that may result in a gain or loss for federal income tax purposes. In addition, shareholders who hold shares of the Fund may receive a final distribution of net income and capital gains earned by the Fund and not previously distributed prior to liquidation. Shareholders should consult their tax advisers regarding the tax treatment of the liquidation.

If you have any questions, please call (888) 474-7725 or visit [newyorklifeinvestments.com/etf](https://www.newyorklifeinvestments.com/etf).

and

INDEXIQ ACTIVE ETF TRUST
IQ MacKay Multi-Sector Income ETF

(each, a “Fund” and collectively, the “Funds”)

Supplement dated October 19, 2023 (“Supplement”)
to each Fund’s Summary Prospectus, Prospectus, and Statement of Additional Information,
each dated August 31, 2023, as supplemented

Notice of Liquidation of the Funds

The Boards of Trustees of IndexIQ ETF Trust and IndexIQ Active ETF Trust (collectively, the “Trusts”), as applicable, have approved the liquidation and dissolution of the Funds on or about December 19, 2023 (the “Liquidation Date”). In connection with the liquidation and dissolution of each Fund, a Fund may depart from its stated investment objective as it winds up its operations and liquidates its portfolio.

December 12, 2023, is expected to be the last day shares of each Fund will be traded on the national securities exchange identified in the Fund’s Prospectus (the “Exchange”), and the last day that the shares of each Fund will trade in the secondary market at market prices. Shareholders may sell their holdings prior to the market close on December 12, 2023, and may incur customary transaction fees from their broker-dealer. After market close on December 12, 2023, shareholders will not be able to transact in Fund shares in the secondary market at market prices. Shareholders should be aware that after December 12, 2023, each Fund will no longer engage in any business activities, except for the purposes of selling and converting into cash all of the assets of the Fund. During this period, each Fund may hold cash and securities that may not be consistent with the Fund’s investment objective and principal investment strategy. A Fund that seeks to track the performance of an index may incur higher tracking error than is typical for the Fund. After the close of business on December 12, 2023, each Fund will no longer accept creation or redemption orders from Authorized Participants (as defined in the Fund’s Prospectus and Statement of Additional Information).

On the Liquidation Date, any remaining shareholders of record of a Fund will receive cash equal to the net asset value of their shares as of that date after the Fund has paid or provided for all of its charges, taxes, expenses and liabilities (the “Liquidating Distribution”). Such Liquidating Distribution received by a shareholder of record may be in an amount that is greater or less than the amount a shareholder might receive if they sell their shares prior to market close on December 12, 2023. Additionally, a Fund must declare and distribute to shareholders any realized capital gains and all net investment income. These dates may be changed without notice at the discretion of the applicable Trust’s officers.

For taxable shareholders holding shares in a non-tax advantaged account, the automatic redemption of shares of a Fund on the Liquidation Date will generally be treated as a sale that may result in a gain or loss for federal income tax purposes. In addition, shareholders who hold shares of a Fund may receive a final distribution of net income and capital gains earned by a Fund and not previously distributed prior to liquidation. Shareholders should consult their tax advisers regarding the tax treatment of the liquidation.

IQ Ultra Short Duration ETF (ULTR)
IQ MacKay ESG Core Plus Bond ETF (ESGB)
IQ MacKay ESG High Income ETF (IQHI)
IQ MacKay Multi-Sector Income ETF (MMSB)
IQ MacKay Municipal Insured ETF (MMIN)
IQ MacKay Municipal Intermediate ETF (MMIT)
IQ MacKay California Municipal Intermediate ETF (MMCA)

NEITHER THE SECURITIES AND EXCHANGE COMMISSION NOR ANY STATE SECURITIES COMMISSION HAS APPROVED OR DISAPPROVED OF THESE SECURITIES OR PASSED UPON THE ACCURACY OR ADEQUACY OF THIS PROSPECTUS. ANY REPRESENTATION TO THE CONTRARY IS A CRIMINAL OFFENSE.

Not FDIC Insured | May Lose Value | No Bank Guarantee

IndexIQ Active ETF Trust (the “Trust”) is a registered investment company that consists of separate investment portfolios called “Funds”. This Prospectus relates to the following Funds:

<u>Name</u>	<u>CUSIP</u>	<u>Symbol</u>	<u>Exchange</u>
IQ Ultra Short Duration ETF	45409F819	ULTR	NYSE Arca
IQ MacKay ESG Core Plus Bond ETF	45409F785	ESGB	NYSE Arca
IQ MacKay ESG High Income ETF	45409F736	IQHI	NYSE Arca
IQ MacKay Multi-Sector Income ETF	45409F744	MMSB	NYSE Arca
IQ MacKay Municipal Insured ETF	45409F843	MMIN	NYSE Arca
IQ MacKay Municipal Intermediate ETF	45409F827	MMIT	NYSE Arca
IQ MacKay California Municipal Intermediate ETF	45409F777	MMCA	NYSE Arca

Each Fund is an exchange-traded fund (“ETF”). This means that shares of the Funds are listed on a national securities exchange (the “Exchange”) and trade at market prices. The market price for a Fund’s shares may be different from its net asset value per share (the “NAV”). Each Fund has its own CUSIP number and exchange trading symbol.

Summary Information

IQ Ultra Short Duration ETF

Investment Objective

The IQ Ultra Short Duration ETF (the "Fund") seeks to provide current income while maintaining limited price volatility.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund ("Shares"). Investors may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example set forth below.

Shareholder Fees (fees paid directly from your investment): None

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment):

Management Fee	0.24%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.22%
Acquired Fund Fees and Expense ^(a)	0.01%
Total Annual Fund Operating Expenses	0.47%
Expense Waiver/Reimbursement ^(b)	0.22%
Total Annual Fund Operating Expenses After Expense Waiver/Reimbursement	0.25%

(a) The Total Annual Fund Operating Expenses may not correlate to the ratio of expenses to average net assets as reported in the "Financial Highlights" section of the Prospectus, which reflects the operating expenses of the Fund and does not include Acquired Fund Fees & Expenses. Acquired Fund Fees & Expenses represent the Fund's pro rata share of fees and expenses incurred indirectly as a result of investing in other funds, including ETFs and money market funds.

(b) IndexIQ Advisors LLC (the "Advisor") has contractually agreed to waive or reduce its management fee and/or reimburse expenses of the Fund in an amount that limits "Total Annual Fund Operating Expenses" (exclusive of interest, taxes, brokerage fees and commissions, dividends paid on short sales, acquired fund fees and expenses, and extraordinary expenses) to not more than 0.24% of the average daily net assets of the Fund. The agreement will remain in effect permanently unless terminated by the Board of Trustees of the Fund.

Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain at current levels. The return of 5% and estimated expenses are for illustration purposes only, and should not be considered indicators of expected Fund expenses or performance, which may be greater or less than the estimates. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

<u>1 Year</u>	<u>3 Years</u>	<u>5 Years</u>	<u>10 Years</u>
\$26	\$80	\$141	\$318

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual Fund operating expenses or in the example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rates was 340% of the average value of its portfolio. This rate excludes the value of the portfolio securities received or delivered as a result of in-kind creations or redemptions of the Shares.

Principal Investment Strategies

The Fund, under normal circumstances, invests at least 80% of its net assets in fixed income securities. The Fund typically invests at least 80% of its assets in fixed income securities rated investment grade by a nationally recognized statistical rating organization ("NRSRO") (such securities rated BBB- and Baa3 or higher) or, if unrated, determined by the NYL Investors LLC (the "Subadvisor") to be of comparable quality. In the event different NRSROs assign different ratings to the same security, if the security is rated by three NRSROs the Fund will apply the middle rating and if the security is rated by two NRSROs the Fund will apply the lower rating. The

Fund may invest in ETFs and closed-end funds that invest substantially all of their assets in investment grade fixed-income securities. Debt securities in which the Fund may invest include all types of debt obligations such as U.S. government securities (including Treasury notes, and obligations, such as repurchase agreements, secured by such instruments), agency securities, corporate bonds, instruments of non-U.S. issuers, asset-backed securities ("ABS") (including collateralized debt and loan obligations, residential mortgage-backed securities, and commercial mortgage-backed securities), commercial paper, debentures, floating rate bonds, and convertible corporate bonds. The Fund will generally seek to maintain a weighted average duration of 1 year or less. Duration is a measure used to determine the sensitivity of a security's price to changes in interest rates. The longer a security's duration, the more sensitive it will be to changes in interest rates. Duration differs from maturity in that it considers, among other characteristics, an instrument's yield, coupon payments, principal payments and call features in addition to the amount of time until the instrument matures. As the value of an instrument changes over time, so will its duration.

The Subadvisor seeks to identify investment opportunities through analyzing individual securities and evaluating each security's relative value and relevance for the Fund. The Subadvisor takes into account multiple factors when allocating across sectors and individual securities, including spread, duration, yield, liquidity, among other factors. The Subadvisor implements a disciplined, value-oriented investment process designed to maintain limited price volatility, which is expected to lead to the preservation of capital by seeking to avoid principal loss through strategic duration management, yield curve positioning, tactical sector allocation and security selection.

The Subadvisor may sell a security if it no longer believes the security will contribute to meeting the investment objective of the Fund. In considering whether to sell a security, the Subadvisor may evaluate, among other things, the condition of the economy and meaningful changes in the issuer's financial condition.

Principal Risks

As with all investments, there are certain risks of investing in the Fund. The Fund's Shares will change in value and you could lose money by investing in the Fund. An investment in the Fund does not represent a complete investment program. An investment in the Fund is not a bank deposit and it is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency, the Advisor or any of its affiliates. You should consider carefully the following risks before investing in the Fund.

Asset-Backed Securities Risk

Asset-backed securities are securities that represent interests in, and whose values and payments are based on, a "pool" of underlying assets, which may include, among others, lower-rated debt securities and corporate loans, consumer loans or mortgages and leases of property. Asset-backed securities include collateralized debt obligations, collateralized bond obligations, and collateralized loan obligations and other similarly structured vehicles. As with other debt securities, asset-backed securities are subject to credit risk, extension risk, interest rate risk, liquidity risk and valuation risk. The impairment of the value of collateral or other assets underlying an asset-backed security, such as a result of non-payment of loans or non-performance of underlying assets, may result in a reduction in the value of such asset-backed securities and losses to the Fund.

Investments in mortgage-related securities make an investor more susceptible to adverse economic, interest rate, political or regulatory events that affect the value of real estate. Mortgage-related securities are also significantly affected by the rate of prepayments. Impairment of the underlying obligations or collateral, such as by non-payment, will reduce a mortgage-related security's value.

Authorized Participant Concentration Risk

Only certain large institutions (an "Authorized Participant") may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that may act as Authorized Participants on an agency basis (i.e., on behalf of other market participants). To the extent that those Authorized Participants exit the business or are unable to proceed with creation and/or redemption orders with the Fund and no other Authorized Participant is able to step forward to engage in creation and redemption transactions with the Fund, Shares may be more likely to trade at a premium or discount to NAV and possibly face trading halts and/or delisting.

Cash Transactions Risk

The Fund currently intends to effect creations and redemptions principally for cash, rather than for in-kind securities. For this reason, the Fund may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds. The Fund may recognize a capital gain on these sales that might not have been incurred if the Fund had made a redemption in-kind. This may decrease the tax efficiency of the Fund compared to ETFs that utilize an in-kind redemption process.

Convertible Securities Risk

A convertible security has characteristics of both equity and debt securities and, as a result, is exposed to risks that are typically associated with both types of securities. Convertible securities are typically subordinate to an issuer's other debt obligations. Issuers of convertible securities may be more vulnerable to changes in the economy, such as a recession or a sustained period of rising interest rates, which could affect their ability to make interest and principal payments. If an issuer stops making interest and/or principal payments, the Fund could lose its entire investment.

Credit Risk

Credit risk is the risk that the issuer or guarantor of a debt instrument or the counterparty to a derivatives contract, repurchase agreement or loan of portfolio securities will be unable or unwilling to make its timely interest and/or principal payments when due or otherwise honor its obligations. Changes in an issuer's or counterparty's credit rating or the market's perception of an issuer's or counterparty's creditworthiness may also adversely affect the value of the Fund's investment in that issuer. The degree of credit risk depends on an issuer's or counterparty's financial condition and on the terms of an obligation.

Cyber Security Risk

The Fund is susceptible to operational risks through breaches in cyber security. Such events may cause the Fund to lose proprietary information, suffer data corruption or lose operational capacity and could cause the Fund to incur regulatory penalties, reputational damage, additional compliance costs associated with corrective measures and/or financial loss. In addition, cyber security breaches of the securities issuers or the Fund's third-party service providers can also subject the Fund to many of the same risks associated with direct cyber security breaches. Although the Fund has established risk management systems designed to reduce the risks associated with cyber security, there is no guarantee that such efforts will succeed.

Debt Securities Risk

The risks of investing in debt securities include (without limitation): (i) credit risk, e.g., the issuer or guarantor of a debt security may be unable or unwilling (or be perceived as unable or unwilling) to make timely principal and/or interest payments or otherwise honor its obligations; (ii) interest rate risk, e.g., when interest rates go up, the value of a debt security generally goes down, and when interest rates go down, the value of a debt security generally goes up; (iii) liquidity risk and valuation risk, e.g., debt securities generally do not trade on a securities exchange, making them generally less liquid and more difficult to value than common stock; (iv) call risk and income risk, e.g., during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund's income if the proceeds are reinvested at lower interest rates; and extension risk, e.g., if interest rates rise, repayments of debt securities may occur more slowly than anticipated by the market, which may drive the prices of these securities down because their interest rates are lower than the current interest rate and the securities remain outstanding longer. Debt securities most frequently trade in institutional round lot size transactions. If the Fund purchases bonds in amounts less than the institutional round lot size, which are frequently referred to as "odd" lots, the odd lot size positions may have more price volatility than institutional round lot size positions. The Fund uses a third-party pricing service to value bond holdings and the pricing service values bonds assuming orderly transactions of an institutional round lot size.

Derivatives Risk

Derivatives are investments whose value depends on (or is derived from) the value of an underlying instrument, such as a security, asset, reference rate or index and involve risks different from, and possibly greater than, the risks associated with other investments. These risks include: (i) the risk that the counterparty to a derivatives transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to, changing supply and demand relationships, government programs and policies, national and international political and economic events, changes in interest rates, inflation and deflation, and changes in supply and demand relationships. Unlike other investments, derivative contracts often have leverage inherent in their terms. The use of leveraged derivatives can magnify potential for gain or loss and, therefore, amplify the effects of market volatility on the Fund's Share price. The effects of leverage may also cause the Fund to liquidate portfolio positions when it would not be advantageous to do so.

Foreign Securities Risk

Investments in the securities of non-U.S. issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market

liquidity and political instability. Some countries and regions have experienced security concerns, war or threats of war and aggression, terrorism, economic uncertainty, natural and environmental disasters and/or systemic market dislocations that have led, and in the future may lead, to increased short-term market volatility and may have adverse long-term effects on the U.S. and world economies and markets generally. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. issuers, and therefore not all material information will be available. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact the Fund's ability to invest in foreign securities or may prevent the Fund from repatriating its investments. Less developed securities markets are more likely to experience problems with the clearing and settling of trades, as well as the holding of securities by local banks, agents and depositories. The less developed a country's securities market is, the greater the likelihood of clearing, custody and trade settlement problems.

Foreign Securities Valuation Risk

The Fund's value may be impacted by events that cause the fair value of foreign securities to materially change between the close of the local exchange on which they trade and the time at which the Fund prices its Shares. Additionally, because foreign exchanges on which securities held by the Fund may be open on days when the Fund does not price its Shares, the potential exists for the value of the securities in the Fund's portfolio to change on days when shareholders will not be able to purchase or sell the Fund's Shares.

Income Risk

The Fund's income may decline when interest rates fall or if there are defaults in its portfolio. This decline can occur because the Fund may subsequently invest in lower-yielding securities when securities in its portfolio mature or the Fund otherwise needs to purchase additional securities.

Interest Rate Risk

An increase in interest rates may cause the value of securities held by the Fund to decline. Fixed income securities with longer durations tend to be more sensitive to changes in interest rates, making them more volatile than securities with shorter durations or floating or adjustable interest rates. The negative impact on the Fund from potential interest rate increases could be swift and significant, including falling market values, increased redemptions and reduced liquidity. The Fund may be subject to a greater risk of rising interest rates during periods of low interest rates.

When interest rates rise, certain obligations will be paid off by the issuer (or other obligated party) more slowly than anticipated, causing the value of these securities to fall. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value. The value of securities with longer maturities generally changes more in response to changes in interest rates than does the value of securities with shorter maturities. During periods of falling interest rates, an issuer of a callable security held by the Fund may "call" or repay the security before its stated maturity, which may result in the Fund having to reinvest the proceeds in securities with lower yields, resulting in a decline in the Fund's income, or in securities with greater risks or with other less favorable features.

Liquidity Risk

Liquidity risk exists when particular investments are difficult to purchase or sell. Certain investments may be subject to restrictions on resale, trade over-the-counter or in limited volume, or lack an active trading market. Accordingly, the Fund may not be able to sell or close out of such investments at favorable times or prices (or at all), or at the prices approximating those at which the Fund currently values them. Illiquid securities may trade at a discount from comparable, more liquid investments and may be subject to wide fluctuations in market value.

Market Risk

Market risks include political, regulatory, market and economic developments, including developments that impact specific economic sectors, industries or segments of the market, which may affect the Fund's value. Turbulence in financial markets, tariffs and other protectionist measures, political developments and uncertainty, central bank policy, and reduced liquidity in equity, credit and fixed income markets may negatively affect many issuers worldwide, which could have an adverse effect on the Fund. During a general downturn in the securities markets, multiple asset classes may be negatively affected. Geopolitical and other events, including war, terrorism, economic uncertainty, trade disputes, public health crises and related geopolitical events have led, and in the future may lead, to disruptions in the US and world economies and markets, which may increase financial market volatility and have significant adverse direct or indirect effects on the Fund and its investments. Market disruptions could cause the Fund to lose money, experience significant

redemptions, and encounter operational difficulties. Although multiple asset classes may be affected by a market disruption, the duration and effects may not be the same for all types of assets.

Money Market/Short-Term Securities Risk

To the extent the Fund holds cash or invests in money market or short-term securities, the Fund may be less likely to achieve its investment objective. In addition, it is possible that the Fund's investments in these instruments could lose money.

Operational Risk

The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund, Advisor and Subadvisor seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address significant operational risks.

Portfolio Management Risk

The Fund is subject to portfolio management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result or, while it may be the desired result, may underperform other types of investment strategies. There can be no guarantee that the Fund will meet its investment objective(s).

Portfolio Turnover Risk

The Fund's strategy may frequently involve buying and selling portfolio securities to rebalance the Fund's investment exposures. High portfolio turnover may result in the Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders. Portfolio turnover risk may cause the Fund's performance to be less than expected.

Repurchase Agreement Risk

Repurchase agreements are subject to the risks that the seller will become bankrupt or insolvent before the date of repurchase or otherwise will fail to repurchase the security as agreed, which could cause losses to the Fund.

Secondary Market Trading Risk

Although the Fund's Shares are listed for trading on one or more securities exchanges, there can be no assurance that an active trading market for such Shares will develop or be maintained by market makers or Authorized Participants. The trading of Shares on securities exchanges is subject to the risk of irregular trading activity. Securities exchanges have requirements that must be met in order for Shares to be listed. There can be no assurance that the requirements of an exchange necessary to maintain the listing of Shares will continue to be met. This risk is particularly acute for funds that fail to attract a large number of shareholders. Pursuant to an exchange's "circuit breaker" rules, trading in the Fund's Shares may be halted due to extraordinary market volatility. Additionally, market makers are under no obligation to make a market in the Fund's Shares and Authorized Participants are not obligated to submit purchase or redemption orders for creation units. In the event market makers cease making a market in the Fund's Shares or Authorized Participants stop submitting purchase or redemption orders for creation units, the Fund's Shares may trade at a larger premium or discount to its NAV.

Trading Price Risk

Although it is generally expected that the market price of the Fund's Shares will approximate the Fund's NAV, there may be times when the market price and the NAV vary significantly. Shares of the Fund trade on securities exchanges at prices at, above or below the Fund's most recent NAV. The NAV of the Fund is calculated at the end of each business day and fluctuates with changes in the market value of the Fund's holdings. The trading price of the Fund's Shares fluctuates continuously throughout trading hours based on market supply of and demand for Shares and the Fund's NAV, among other reasons. As a result, the trading prices of the Fund's Shares may deviate significantly from NAV during periods of market volatility. The market price of the Fund's Shares during the trading day, like the price of any exchange-traded security, includes a "bid/ask" spread charged by market makers or other participants that trade the Shares. In times of severe market disruption, the bid/ask spread can increase significantly. At those times, Shares are most likely to be traded at a discount to NAV, and the discount is likely to be greatest when the price of Shares is falling fastest, which may be the time that an investor most wants to sell their Shares. The risk of wide bid and ask spreads may be especially pronounced for smaller funds. In addition, increased market volatility may cause wider spreads.

Valuation Risk

When valuing the Fund's portfolio investments, if a market quotation is readily available for a portfolio investment, that investment will generally be valued at the market value. However, unlike publicly traded securities that trade on national securities exchanges, there is no central place or exchange for trading most debt securities and thus readily available market quotations are unavailable. Debt securities generally trade on an "over-the-counter" market. Due to the lack of centralized information and trading, and variations in lot sizes of certain debt securities, the valuation of debt securities may carry more uncertainty and risk than that of publicly traded securities. Debt securities are commonly valued by third-party pricing service providers that utilize a range of market-based inputs and assumptions, including readily available market quotations obtained from broker-dealers making markets in such securities, cash flows and transactions for comparable instruments. However, because the available information is less reliable and more subjective, elements of judgment may play a greater role in valuation of debt securities than for other types of securities. Additionally, pricing service providers generally price debt securities assuming orderly transactions of an institutional "round lot" size, but some trades may occur in smaller, "odd lot" sizes, often at lower prices than institutional round lot trades. Valuing the Fund's investments using fair value pricing provided by pricing service providers will result in prices that may differ from current market valuations and that may not be the prices at which those investments could have been sold during the period in which the particular fair values were used. It is possible that the fair value determined for a portfolio instrument may be materially different from the value that could be realized upon the sale of that instrument.

Performance Information

The following bar chart and table provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compare with its benchmark over time. The table that follows the bar chart shows the Fund's average annual total return, both before and after taxes. The Bloomberg Short Treasury 3-6 Month Index is a component of the Barclays Short Treasury Index, which includes aged U.S. Treasury bills, notes and bonds with a remaining maturity from 1 up to (but not including) 12 months and excludes zero coupon strips.

All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future. Performance reflects fee waivers and/or expense reimbursement in effect, if such waivers or reimbursements were not in place, the Fund's performance would be reduced. Fund performance current to the most recent month-end is available by calling 1-888-474-7725 or by visiting newyorklifeinvestments.com/eff.

The Fund's year-to-date total return as of June 30, 2023 was 2.17%.

Best and Worst Quarter Returns (for the period reflected in the bar chart above)

	Return	Quarter/Year
Highest Return	2.52%	2Q/2020
Lowest Return	-2.83%	1Q/2020

Average Annual Total Returns as of December 31, 2022

	1 Year	Since Inception ⁽¹⁾
Returns before taxes	0.30%	0.73%
Returns after taxes on distributions ⁽²⁾	-0.68%	-0.12%
Returns after taxes on distributions and sale of Fund Shares ⁽²⁾	0.17%	0.23%
Bloomberg Short Treasury 3-6 Month Index (reflects no deduction for fees, expenses or taxes)	1.27%	0.91%

(1) The Fund commenced operations on July 31, 2019.

(2) After-tax returns are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on your tax situation and may differ from those shown and are not relevant if you hold your Shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts. In some cases the return after taxes may exceed the return before taxes due to an assumed tax benefit from any losses on a sale of Fund Shares at the end of the measurement period.

Investment Advisor and Subadvisor

IndexIQ Advisors LLC is the investment advisor to the Fund.

NYL Investors LLC serves as the investment subadvisor to the Fund.

Portfolio Managers

The professionals of the subadvisor that are jointly and primarily responsible for the day-to-day management of the Fund are:

Name & Title	Length of Service as Fund's Portfolio Manager
Kenneth Sommer, Managing Director	Since Fund's inception
Matthew Downs, Senior Director	Since Fund's inception

Purchase and Sale of Fund Shares

Unlike conventional mutual funds, the Fund issues and redeems Shares on a continuous basis, at NAV, only in large blocks of Shares called "Creation Units." Individual Shares of the Fund may only be purchased and sold on the secondary market through a broker-dealer. Since Shares of the Fund trade on securities exchanges in the secondary market at their market price rather than their NAV, the Fund's Shares may trade at a price greater than (premium) or less than (discount) the Fund's NAV. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares of the Fund (bid) and the lowest price a seller is willing to accept for Shares of the Fund (ask) when buying or selling Shares in the secondary market (the "bid-ask spread"). Recent information, including the Fund's NAV, market price, premiums and discounts, and bid-ask spreads, is available online at newyorklifeinvestments.com/etf.

Tax Information

The Fund's distributions are expected to be taxed as ordinary income, qualified dividend income and/or capital gains, unless you are investing through a tax-deferred arrangement, such as a 401(k) plan or individual retirement account. However, subsequent withdrawals from such a tax-advantaged account may be subject to U.S. federal income tax. You should consult your tax advisor about your specific situation.

Financial Intermediary Compensation

If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Advisor or other related companies may pay the intermediary for marketing activities and presentations, educational training programs, conferences, the development of technology platforms and reporting systems or other services related to the sale or promotion of the Fund. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

Summary Information

IQ MacKay ESG Core Plus Bond ETF

Investment Objective

The IQ MacKay ESG Core Plus Bond ETF (the "Fund") seeks total return, while incorporating the Subadvisor's ESG investment strategy.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund ("Shares"). Investors may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example set forth below.

Shareholder Fees (fees paid directly from your investment): None

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment):

Management Fee	0.39%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.11%
Total Annual Fund Operating Expenses	0.50%
Expense Waiver/Reimbursement ^(a)	0.11%
Total Annual Fund Operating Expenses After Expense Waiver/Reimbursement	0.39%

(a) IndexIQ Advisors LLC (the "Advisor") has contractually agreed to waive or reduce its management fee and/or reimburse expenses of the Fund in an amount that limits "Total Annual Fund Operating Expenses" (exclusive of interest, taxes, brokerage fees and commissions, dividends paid on short sales, acquired fund fees and expenses, and extraordinary expenses) to not more than 0.39% of the average daily net assets of the Fund. The agreement will remain in effect permanently unless terminated by the Board of Trustees of the Fund.

Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain at current levels. The return of 5% and estimated expenses are for illustration purposes only, and should not be considered indicators of expected Fund expenses or performance, which may be greater or less than the estimates. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

<u>1 Year</u>	<u>3 Years</u>	<u>5 Years</u>	<u>10 Years</u>
\$40	\$125	\$219	\$493

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual Fund operating expenses or in the example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rates was 212% of the average value of its portfolio. This rate excludes the value of the portfolio securities received or delivered as a result of in-kind creations or redemptions of the Shares.

Principal Investment Strategies

The Fund, under normal circumstances, invests at least 80% of its assets (net assets plus any borrowings for investment purposes) in bonds, which include all types of debt securities, such as: debt or debt-related securities issued or guaranteed by the U.S. or foreign governments, their agencies or instrumentalities; obligations of international or supranational entities; debt securities issued by U.S. or foreign corporate entities; zero coupon bonds; municipal bonds; mortgage-related and other asset-backed securities; and loan participation interests. The Fund's bond investments may have fixed or floating rates of interest. The Fund generally seeks to invest in a broad portfolio of corporate, government, and mortgage-related and asset-backed securities.

Under normal circumstances, the Fund will invest at least 80% of its assets in securities that meet MacKay Shields LLC's (the "Subadvisor") environmental, social, and corporate governance (ESG) criteria. The Subadvisor analyzes and applies its ESG criteria to corporate, sovereign, and mortgage-related and other securitized issuers. The Subadvisor's ESG analysis includes its own proprietary assessments of ESG factors as well as standards developed and set forth by recognized organizations such as entities sponsored by the United Nations.

The Fund will not invest in instruments of corporate issuers that have been determined by the Subadvisor, through its own analysis or using third party data, to not be in compliance with the Principles of the UN Global Compact. The Fund will also not invest in instruments of corporate issuers that have been determined by the Subadvisor, through its own analysis or using third party data, to: (i) engage in unconventional oil and gas production (such as oil sands, oil shale, shale gas, deep water and Arctic drilling); (ii) derive greater than 5% of their revenue from (a) the manufacture or production of military weapons, (b) the manufacture or production of tobacco, (b) the mining of coal, or (c) the production and distribution of pornography; or (iii) manufacture controversial weapons (such as anti-personnel mines, biological weapons, chemical weapons, cluster munitions, depleted uranium ammunition and armor, incendiary weapons, nuclear weapons, and white phosphorus munitions).

The Fund may invest up to 30% of its total assets in securities rated below investment grade by a nationally recognized statistical rating organization ("NRSRO") (such securities rated lower than BBB- and Baa3), or, if unrated, judged to be of comparable quality by the Subadvisor. Securities that are rated below investment grade by NRSROs are commonly referred to as "high-yield securities" or "junk bonds." If NRSROs assign different ratings for the same security, the Fund will use the higher rating for purposes of determining the credit quality. The Fund may invest up to 20% of its net assets in securities of foreign issuers, including up to 10% of its net assets in securities of emerging market issuers. The Fund may invest up to 20% of its net assets in securities denominated in a currency other than the U.S. dollar. The Fund may invest up to 5% of its net assets in common stocks. To the extent possible, the Fund will attempt to hedge its foreign currency exposure against the U.S. dollar. The Fund may also invest in derivatives such as futures, forwards, options, forward commitments and swap agreements, including interest rate, total return and credit default swap agreements, to seek to enhance returns or reduce the risk of loss by hedging certain of its holdings or manage duration. Commercial paper must be, when purchased, rated in the highest rating category by a NRSRO or if unrated, determined by the Subadvisor to be of comparable quality.

The Fund will generally seek to maintain a portfolio modified duration to worst within 2.5 years (plus or minus) of the duration of the Bloomberg U.S. Aggregate Bond Index. Duration is a measure used to determine the sensitivity of a security's price to changes in interest rates. The longer a security's duration, the more sensitive it will be to changes in interest rates. Duration to worst is the duration of a bond computed using the bond's nearest call date or maturity, whichever comes first. This measure ignores future cash flow fluctuations due to embedded optionality.

The Fund may invest in mortgage dollar rolls, to-be-announced ("TBA") securities transactions, variable rate notes and floating rate notes. The Fund may purchase or sell securities on a when-issued, delayed delivery or forward commitment basis. The Fund may, without limitation, seek to obtain market exposure to the securities in which it primarily invests by entering into a series of purchase and sale contracts or by using other investment techniques (such as buy backs or dollar rolls).

Investment Process: The Subadvisor utilizes an investment process that combines a top-down analytical framework with a rigorous bottom-up process.

Fundamental economic cycle analysis, credit quality and interest rate trends are the principal factors considered by the Subadvisor in managing the Fund and determining whether to increase or decrease the emphasis placed upon a particular type of security or industry sector within the Fund's investment portfolio. The Subadvisor's target duration for the Fund is based on a set of investment decisions that take into account a broad range of economic, fundamental and technical indicators.

The Subadvisor's ESG analysis evaluates securities of corporate, sovereign, and mortgage-related and other securitized issuers using environmental, social, corporate governance factors. The Subadvisor considers these ESG criteria systematically throughout the Fund's investment process. The Subadvisor's ESG analysis evaluates each issuer relative to other issuers in the relevant peer group and asset class. The Subadvisor's ESG analysis is a proprietary process developed by the Subadvisor that assigns each issuer separate "environmental," "social," and "governance" scores based on ESG factors deemed most material to that asset class and peer group.

Although the Subadvisor does not use third party ESG scores to calculate an issuer's ESG score, as described further below, the Subadvisor may use third-party research to help identify sustainability issues that are likely to affect the financial condition or operating performance of an issuer.

The Subadvisor's scoring process seeks to rate issuers as "outperforming," "average," or "underperforming" within each of the environmental, social and governance factors versus peers. The issuer's score in each of the three factors is combined on an equally weighted basis to determine the issuer's overall ESG score. In addition to an issuer's current overall score, the Subadvisor also considers the historical trend in an issuer's score and seeks to identify opportunities where a company has improved its ESG practices and is expected to continue to demonstrate further improvement. A security meets the Subadvisor's ESG criteria if it: (i) has received a score of at least "average"; or (ii) if the issuer's current score is below "average," the issuer has demonstrated a trend of improving scores. During the portfolio construction process, the Subadvisor will assess overall environmental, social and governance scores across the portfolio, as well as by overall issuer score.

The Subadvisor's process for corporate credit ESG analysis includes evaluating material ESG factors on an industry-by-industry basis and issuer performance of those factors is based on under/outperformance of industry peers. Factors considered as part of the Subadvisor's ESG analysis of corporate issuers include:

- Environmental factors such as the issuer's ability to identify and mitigate pecuniary environmental risk exposure, predominantly arising from regulatory factors in a transition to a low carbon economy.
- Social factors such as an issuer's ability to effectively identify and mitigate pecuniary social risk exposure.
- Governance factors such as assessing an issuer's quality of management and business oversight.

The Subadvisor's process for developed and emerging sovereign debt ESG utilizes a framework that reflects factors that are specific to sovereign debt, including ESG data released by the World Bank. The combined ESG score for a sovereign provides an assessment of the current and anticipated future stability and resiliency of the sovereign and the strength of its economy.

The Subadvisor's process for mortgage-related and other securitized asset ESG considers material ESG factors at an asset type and security level.

The Subadvisor's engagement activities may include, but are not limited to, in-person meetings and phone calls with issuers to understand their sustainability goals and business practices as well as other industry participants engaged in ESG and sustainability initiatives. This engagement allows the Subadvisor to better align mutual interests while impacting change.

The Subadvisor may sell a security if it no longer believes that the security will contribute to meeting the investment objective of the Fund or no longer meets its ESG standards. In considering whether to sell a security, the Subadvisor may evaluate, among other things, the condition of the economy, meaningful changes in the issuer's financial condition, changes in the condition and outlook in the issuer's industry, and a change in the Subadvisor's ESG scoring.

Principal Risks

As with all investments, there are certain risks of investing in the Fund. The Shares will change in value and you could lose money by investing in the Fund. An investment in the Fund does not represent a complete investment program. An investment in the Fund is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. You should consider carefully the following risks before investing in the Fund. A more complete discussion of Principal Risks is included under "Description of the Principal Risks of the Fund."

Asset-Backed Securities Risk

Asset-backed securities are securities that represent interests in, and whose values and payments are based on, a "pool" of underlying assets, which may include, among others, lower-rated debt securities and corporate loans, consumer loans or mortgages and leases of property. Asset-backed securities include collateralized debt obligations, collateralized bond obligations, and collateralized loan obligations and other similarly structured vehicles. As with other debt securities, asset-backed securities are subject to credit risk, extension risk, interest rate risk, liquidity risk and valuation risk. The impairment of the value of collateral or other assets underlying an asset-backed security, such as a result of non-payment of loans or non-performance of underlying assets, may result in a reduction in the value of such asset-backed securities and losses to the Fund.

Investments in mortgage-related securities make an investor more susceptible to adverse economic, interest rate, political or regulatory events that affect the value of real estate. Mortgage-related securities are also significantly affected by the rate of prepayments. Impairment of the underlying obligations or collateral, such as by non-payment, will reduce a mortgage-related security's value.

Authorized Participant Concentration Risk

Only certain large institutions may engage in creation or redemption transactions directly with the Fund (each, an "Authorized Participant"). The Fund has a limited number of institutions that may act as Authorized Participants on an agency basis (i.e., on behalf of other market participants). To the extent that those Authorized Participants exit the business or are unable to proceed with creation and/or redemption orders with the Fund and no other Authorized Participant is able to step forward to engage in creation and redemption transactions with the Fund, Shares may be more likely to trade at a premium or discount to NAV and possibly face trading halts and/or delisting.

Cash Transactions Risk

The Fund currently intends to effect creations and redemptions principally for cash, rather than for in-kind securities. For this reason, the Fund may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds. The Fund may recognize a capital gain on these sales that might not have been incurred if the Fund had made a redemption in-kind. This may decrease the tax efficiency of the Fund compared to ETFs that utilize an in-kind redemption process.

Credit Risk

Credit risk is the risk that the issuer or guarantor of a debt instrument or the counterparty to a derivatives contract, repurchase agreement or loan of portfolio securities will be unable or unwilling to make its timely interest and/or principal payments when due or otherwise honor its obligations. Changes in an issuer's or counterparty's credit rating or the market's perception of an issuer's or counterparty's creditworthiness may also adversely affect the value of the Fund's investment in that issuer. The degree of credit risk depends on an issuer's or counterparty's financial condition and on the terms of an obligation.

Currency Risk

Investments directly in foreign (non-U.S.) currencies or in securities that trade in, and receive revenues in, foreign (non-U.S.) currencies are subject to the risk that those currencies will decline in value relative to the U.S. dollar. Currency rates in foreign countries may fluctuate significantly over short periods of time for a number of reasons, including changes in interest rates, intervention (or the failure to intervene) by U.S. or foreign governments, central banks or supranational entities such as the International Monetary Fund, or by the imposition of currency controls or other political developments in the United States or abroad.

Cyber Security Risk

The Fund is susceptible to operational risks through breaches in cyber security. Such events may cause the Fund to lose proprietary information, suffer data corruption or lose operational capacity and could cause the Fund to incur regulatory penalties, reputational damage, additional compliance costs associated with corrective measures and/or financial loss. In addition, cyber security breaches of the securities issuers or the Fund's third-party service providers can also subject the Fund to many of the same risks associated with direct cyber security breaches. Although the Fund has established risk management systems designed to reduce the risks associated with cyber security, there is no guarantee that such efforts will succeed.

Debt Securities Risk

The risks of investing in debt securities include (without limitation): (i) credit risk, e.g., the issuer or guarantor of a debt security may be unable or unwilling (or be perceived as unable or unwilling) to make timely principal and/or interest payments or otherwise honor its obligations; (ii) interest rate risk, e.g., when interest rates go up, the value of a debt security generally goes down, and when interest rates go down, the value of a debt security generally goes up; (iii) liquidity risk and valuation risk, e.g., debt securities generally do not trade on a securities exchange, making them generally less liquid and more difficult to value than common stock; (iv) call risk and income risk, e.g., during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund's income if the proceeds are reinvested at lower interest rates; and (v) extension risk, e.g., if interest rates rise, repayments of debt securities may occur more slowly than anticipated by the market, which may drive the prices of these securities down because their interest rates are lower than the current interest rate and the securities remain outstanding longer. Debt securities most frequently trade in institutional round lot size transactions. If the Fund purchases bonds in amounts less than the institutional round lot size, which are frequently referred to as "odd" lots, the odd lot size positions may have more price

volatility than institutional round lot size positions. The Fund uses a third-party pricing service to value bond holdings and the pricing service values bonds assuming orderly transactions of an institutional round lot size.

Derivatives Risk

Derivatives are investments whose value depends on (or is derived from) the value of an underlying instrument, such as a security, asset, reference rate or index and involve risks different from, and possibly greater than, the risks associated with other investments. These risks include: (i) the risk that the counterparty to a derivatives transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to changing supply and demand relationships, government programs and policies, national and international political and economic events, changes in interest rates, inflation and deflation, and changes in supply and demand relationships. Unlike other investments, derivative contracts often have leverage inherent in their terms. The use of leveraged derivatives can magnify potential for gain or loss and, therefore, amplify the effects of market volatility on the Fund's Share price. The effects of leverage may also cause the Fund to liquidate portfolio positions when it would not be advantageous to do so.

Emerging Markets Securities Risk

Securities of issuers based in countries with developing economies (emerging market countries) may present market, credit, currency, liquidity, legal, political and other risks different from, or greater than, the risks of investing in developed market countries and are generally considered speculative in nature. Emerging market countries are subject to greater market volatility, lower trading volume, political and economic instability, uncertainty regarding the existence of trading markets, rapid inflation, possible repatriation of investment income and capital, currency convertibility issues, less uniform accounting standards and more governmental limitations on foreign investment than more developed markets. Laws regarding foreign investment in emerging market securities, securities regulation, title to securities, and shareholder rights may change quickly and unpredictably. In addition, the enforcement of systems of taxation at federal, regional and local levels in emerging market countries may be inconsistent and subject to sudden change.

Foreign Currency Forward Contracts Risk

When trading in foreign currency forward contracts, the Fund will contract with a foreign or domestic bank, or a foreign or domestic securities dealer, to make or take future delivery of a specified amount of a particular currency. There are no limitations on daily price moves in such forward contracts, and banks and dealers are not required to continue to make markets in such contracts. Governmental imposition of credit controls might limit any such forward contract trading. Foreign currency forward contracts involve certain risks, including the risk of failure of the counterparty to perform its obligations under the contract and the risk that the use of forward contracts may not serve as a complete hedge because of an imperfect correlation between movements in the prices of the contracts and the prices of the currencies hedged.

Foreign Securities Risk

Investments in the securities of non-U.S. issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Some countries and regions have experienced security concerns, war or threats of war and aggression, terrorism, economic uncertainty, natural and environmental disasters and/or systemic market dislocations that have led, and in the future may lead, to increased short-term market volatility and may have adverse long-term effects on the U.S. and world economies and markets generally. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. issuers, and therefore not all material information will be available. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact the Fund's ability to invest in foreign securities or may prevent the Fund from repatriating its investments. Less developed securities markets are more likely to experience problems with the clearing and settling of trades, as well as the holding of securities by local banks, agents and depositories. The less developed a country's securities market is, the greater the likelihood of clearing, custody and trade settlement problems.

Foreign Securities Valuation Risk

The Fund's value may be impacted by events that cause the fair value of foreign securities to materially change between the close of the local exchange on which they trade and the time at which the Fund prices its Shares. Additionally, because foreign exchanges on which securities held by the Fund may be open on days when the Fund does not price its Shares, the potential exists for the value of the securities in the Fund's portfolio to change on days when shareholders will not be able to purchase or sell the Fund's Shares.

Futures Contracts Risk

Futures contracts are typically exchange-traded contracts that call for the future delivery of an asset at a certain price and date, or cash settlement of the terms of the contract. There may be an imperfect correlation between the changes in market value of the securities held by the Fund and the prices of futures contracts. There may not be a liquid secondary market for the futures contracts and the Fund may not be able to enter into a closing transaction. Exchanges may also limit the number of positions that can be held or controlled by the Fund, thus limiting the ability of the Fund to implement its investment strategy. Futures markets are highly volatile and the use of futures may increase the Fund's volatility. The value of an investment in the Fund may change quickly and without warning.

High Yield Securities Risk

High yield securities, or "junk" bonds, generally offer a higher current yield than the yield available from higher grade issues, but are subject to greater market fluctuations, are less liquid and provide a greater risk of loss than investment grade securities, and therefore are considered to be highly speculative. In general, high yield securities may have a greater risk of default than other types of securities and could cause income and principal losses for the Fund.

Income Risk

The Fund's income may decline when interest rates fall or if there are defaults in its portfolio. This decline can occur because the Fund may subsequently invest in lower-yielding securities when securities in its portfolio mature or the Fund otherwise needs to purchase additional securities.

Interest Rate Risk

An increase in interest rates may cause the value of securities held by the Fund to decline. Fixed income securities with longer durations tend to be more sensitive to changes in interest rates, making them more volatile than securities with shorter durations or floating or adjustable interest rates. The negative impact on the Fund from potential interest rate increases could be swift and significant, including falling market values, increased redemptions and reduced liquidity. The Fund may be subject to a greater risk of rising interest rates during periods of low interest rates.

When interest rates rise, certain obligations will be paid off by the issuer (or other obligated party) more slowly than anticipated, causing the value of these securities to fall. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value. The value of securities with longer maturities generally changes more in response to changes in interest rates than does the value of securities with shorter maturities. During periods of falling interest rates, an issuer of a callable security held by the Fund may "call" or repay the security before its stated maturity, which may result in the Fund having to reinvest the proceeds in securities with lower yields, resulting in a decline in the Fund's income, or in securities with greater risks or with other less favorable features.

Investment Style Risk

The Fund seeks to allocate investment exposure based upon a particular style of investing. Different investment styles tend to shift in and out of favor depending upon market and economic conditions and investor sentiment. As a consequence, the Fund may underperform as compared to the market generally or to other funds that invest in similar asset classes but employ different investment styles. Further, there is no guarantee that the Fund will accurately or optimally utilize the investment style or that it will successfully provide the desired investment exposure.

- *ESG Investing Style Risk.* The Fund seeks exposure to the securities of companies meeting environmental, social and corporate governance investing criteria. The Fund excludes or limits exposure to securities of certain issuers for non-financial reasons, and the Fund may forgo some market opportunities available to funds that do not use these criteria. The application of ESG investing criteria may affect the Fund's exposure to certain sectors or types of investments and may impact the Fund's relative investment performance depending on whether such sectors or investments are in or out of favor in the market. ESG investing is subjective by nature, and therefore offers no guarantee that the ESG criteria utilized by the Subadvisor will accurately provide exposure to issuers meeting environmental, social and corporate governance criteria or any judgment exercised by the Subadvisor will reflect the beliefs or values of any particular investor. In addition, ESG investing is dependent upon information and data that may be incomplete, inaccurate or unavailable, which could adversely affect the analysis of the factors relevant to a particular investment.

Liquidity Risk

Liquidity risk exists when particular investments are difficult to purchase or sell. Certain investments may be subject to restrictions on resale, trade over-the-counter or in limited volume, or lack an active trading market. Accordingly, the Fund may not be able to sell or close out of such investments at favorable times or prices (or at all), or at the prices approximating those at which the Fund currently values them. Illiquid securities may trade at a discount from comparable, more liquid investments and may be subject to wide fluctuations in market value.

Market Risk

Market risks include political, regulatory, market and economic developments, including developments that impact specific economic sectors, industries or segments of the market, which may affect the Fund's value. Turbulence in financial markets, tariffs and other protectionist measures, political developments and uncertainty, central bank policy, and reduced liquidity in equity, credit and fixed income markets may negatively affect many issuers worldwide, which could have an adverse effect on the Fund. During a general downturn in the securities markets, multiple asset classes may be negatively affected. Geopolitical and other events, including war, terrorism, economic uncertainty, trade disputes, public health crises and related geopolitical events have led, and in the future may lead, to disruptions in the US and world economies and markets, which may increase financial market volatility and have significant adverse direct or indirect effects on the Fund and its investments. Market disruptions could cause the Fund to lose money, experience significant redemptions, and encounter operational difficulties. Although multiple asset classes may be affected by a market disruption, the duration and effects may not be the same for all types of assets.

Money Market/Short-Term Securities Risk

To the extent the Fund holds cash or invests in money market or short-term securities, the Fund may be less likely to achieve its investment objective. In addition, it is possible that the Fund's investments in these instruments could lose money.

Municipal Bond Risk

Issuers, including governmental issuers, may be unable to pay their obligations as they come due. The values of Municipal Bonds that depend on a specific revenue source to fund their payment obligations may fluctuate as a result of actual or anticipated changes in the cash flows generated by the revenue source or changes in the priority of the municipal obligation to receive the cash flows generated by the revenue source. The values of Municipal Bonds held by the Fund may be adversely affected by local political and economic conditions and developments. Adverse conditions in an industry significant to a local economy could have a correspondingly adverse effect on the financial condition of local issuers. This risk would be heightened to the extent that the Fund invests a substantial portion of its assets in Municipal Bonds issued pursuant to similar projects or whose interest is paid solely from revenues of similar projects. In addition, income from Municipal Bonds held by the Fund could be declared taxable because of, among other things, unfavorable changes in tax laws, adverse interpretations by the Internal Revenue Service or state tax authorities, or noncompliant conduct of an issuer or other obligated party. Loss of tax-exempt status may cause interest received and distributed to shareholders by the Fund to be taxable and may result in a significant decline in the values of such municipal securities. There are various different types of Municipal Bonds, each with its own unique risk profile. Some of these risks include:

- *General Obligation Bonds Risk* — timely payments depend on the issuer's credit quality, ability to raise tax revenues and ability to maintain an adequate tax base;
- *Revenue Bonds (including Industrial Development Bonds) Risk* — timely payments depend on the money earned by the particular facility or class of facilities, or the amount of revenues derived from another source, and may be negatively impacted by the general credit of the user of the facility;
- *Private Activity Bonds Risk* — municipalities and other public authorities issue private activity bonds to finance development of industrial facilities for use by a private enterprise, which is solely responsible for paying the principal and interest on the bonds, and payment under these bonds depends on the private enterprise's ability to do so;
- *Moral Obligation Bonds Risk* — moral obligation bonds are generally issued by special purpose public authorities of a state or municipality. If the issuer is unable to meet its obligations, repayment of these bonds becomes a moral commitment, but not a legal obligation, of the state or municipality;
- *Municipal Notes Risk* — municipal notes are shorter-term municipal debt obligations that pay interest that is, in the opinion of bond counsel for the issuer at the time of issuance, generally excludable from

gross income for federal income tax purposes (except that the interest may be includable in taxable income for purposes of the federal alternative minimum tax) and that have a maturity that is generally one year or less. If there is a shortfall in the anticipated proceeds, the notes may not be fully repaid and the Fund may lose money; and

- *Municipal Lease Obligations Risk* — in a municipal lease obligation, the issuer agrees to make payments when due on the lease obligation. Although the issuer does not pledge its unlimited taxing power for payment of the lease obligation, the lease obligation is secured by the leased property.

Municipal Bond Market Liquidity Risk

Inventories of Municipal Bonds held by brokers and dealers may decrease, lessening their ability to make a market in these securities. Any reduction in market-making capacity has the potential to decrease the Fund's ability to buy or sell Municipal Bonds and increase price volatility and trading costs, particularly during periods of economic or market stress. As a result, the Fund may be forced to accept a lower price to sell a Municipal Bond, to sell other securities to raise cash, or to give up an investment opportunity, any of which could have a negative effect on performance.

Operational Risk

The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund and Advisor seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address significant operational risks.

Portfolio Management Risk

The Fund is subject to portfolio management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result or, while it may be the desired result, may underperform other types of investment strategies. There can be no guarantee that the Fund will meet its investment objective(s).

Portfolio Turnover Risk

The Fund's strategy may frequently involve buying and selling portfolio securities to rebalance the Fund's investment exposures. High portfolio turnover may result in the Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders. Portfolio turnover risk may cause a Fund's performance to be less than expected.

Risks of Investing in Loans

Investments in loans are subject to the same risks as investments in other types of debt securities, including credit risk, interest rate risk, liquidity risk and valuation risk that may be heightened because of the limited public information available regarding loans and because loan borrowers may be leveraged and tend to be more adversely affected by changes in market or economic conditions. Default in the payment of interest or principal on a loan will result in a reduction in the value of the loan and consequently a reduction in the value of an investment in that loan. If an investor holds a loan through another financial institution or relies on a financial institution to administer the loan, its receipt of principal and interest on the loan may be subject to the credit risk of that financial institution. It is possible that any collateral securing a loan may be insufficient or unavailable to the investor, and that the investor's rights to collateral may be limited by bankruptcy or insolvency laws. Additionally, there is no central clearinghouse for loan trades and the loan market has not established enforceable settlement standards or remedies for failure to settle. Consequently, the secondary market for loans may be subject to irregular trading activity, wide bid/ask spreads and extended trade settlement periods (in some cases longer than 7 days), which may cause an investor to be unable to realize the full value of its investment. In addition, loans are generally not registered with the SEC under the Securities Act of 1933, as amended, and may not be considered "securities," and an investor may not be entitled to rely on the anti-fraud protections of the federal securities laws. An investment in loans made to non-U.S. borrowers may be affected by political and social instability, changes in economic or taxation policies, difficulties in enforcing obligations, decreased liquidity and increased volatility. Foreign borrowers may be subject to less regulation, resulting in less publicly available information about the borrowers.

The loan market has seen a significant increase in loans with weaker lender protections including, but not limited to, limited financial maintenance covenants or, in some cases, no financial maintenance covenants (i.e., "covenant-lite loans") that would typically be included in a traditional loan agreement and general weakening of other restrictive covenants applicable to the borrower such as limitations on incurrence of additional debt, restrictions on payments of junior debt or restrictions on dividends and distributions. Weaker lender protections such as the absence of financial maintenance covenants in a loan agreement and the inclusion of "borrower-favorable" terms may impact recovery values and/or trading levels of loans in the future. The absence of financial maintenance covenants in a loan agreement generally means that the lender may not be able to declare a default if financial performance deteriorates. This may hinder an investor's ability to reprice credit risk associated with a particular borrower and reduce the investor's ability to restructure a problematic loan and mitigate potential loss. As a result, an investor's exposure to losses on investments in loans may be increased, especially during a downturn in the credit cycle or changes in market or economic conditions.

Risks of Loan Assignments and Participations

The purchaser of an assignment typically succeeds to all the rights and obligations of the assigning institution and becomes a lender under the credit agreement with respect to the debt obligation; however, the purchaser of an assignment may not be able to unilaterally enforce all rights and remedies under the loan and with regard to any associated collateral. Because assignments may be arranged through private negotiations between potential assignees and potential assignors, the rights and obligations acquired by the purchaser of an assignment may differ from, and be more limited than, those held by the assigning lender. In addition, if the loan is foreclosed, the purchaser of an assignment could become part owner of any collateral and could bear the costs and liabilities of owning and disposing of the collateral. To the extent an investor sells a loan by way of assignment, the investor may be required to pass along a portion of any fees to which the investor was entitled under the loan. In connection with purchasing participations, such purchaser generally will have no right to enforce compliance by the borrower with the terms of the loan agreement relating to the loan, nor any rights of set-off against the borrower, and the purchaser may not directly benefit from any collateral supporting the loan in which it has purchased the participation. As a result, the purchaser will be subject to the credit risk of both the borrower and the lender that is selling the participation. In the event of the insolvency of the lender selling a participation, the purchaser may be treated as a general creditor of the lender and may not benefit from any set-off between the lender and the borrower.

Secondary Market Trading Risk

Although the Fund's Shares are listed for trading on one or more securities exchanges, there can be no assurance that an active trading market for such Shares will develop or be maintained by market makers or Authorized Participants. The trading of Shares on securities exchanges is subject to the risk of irregular trading activity. Securities exchanges have requirements that must be met in order for Shares to be listed. There can be no assurance that the requirements of an exchange necessary to maintain the listing of Shares will continue to be met. This risk is particularly acute for funds that fail to attract a large number of shareholders. Pursuant to an exchange's "circuit breaker" rules, trading in the Fund's Shares may be halted due to extraordinary market volatility. Additionally, market makers are under no obligation to make a market in the Fund's Shares and Authorized Participants are not obligated to submit purchase or redemption orders for creation units. In the event market makers cease making a market in the Fund's Shares or Authorized Participants stop submitting purchase or redemption orders for creation units, the Fund's Shares may trade at a larger premium or discount to its NAV.

Swap Agreements Risk

Swap agreements may involve greater risks than direct investment in securities as they may be leveraged and are subject to credit risk, counterparty risk, liquidity risk and valuation risk. A swap agreement could result in losses if the underlying reference or asset does not perform as anticipated. In addition, many swaps trade over-the-counter and may be considered illiquid. It may not be possible for the Fund to liquidate a swap position at an advantageous time or price, which may result in significant losses.

Trading Price Risk

Although it is generally expected that the market price of the Fund's Shares will approximate the Fund's NAV, there may be times when the market price and the NAV vary significantly. Shares of the Fund trade on securities exchanges at prices at, above or below the Fund's most recent NAV. The NAV of the Fund is calculated at the end of each business day and fluctuates with changes in the market value of the Fund's holdings. The trading price of the Fund's Shares fluctuates continuously throughout trading hours based on market supply of and

demand for Shares and the Fund's NAV, among other reasons. As a result, the trading prices of the Fund's Shares may deviate significantly from NAV during periods of market volatility. The market price of the Fund's Shares during the trading day, like the price of any exchange-traded security, includes a "bid/ask" spread charged by market makers or other participants that trade the Shares. In times of severe market disruption, the bid/ask spread can increase significantly. At those times, Shares are most likely to be traded at a discount to NAV, and the discount is likely to be greatest when the price of Shares is falling fastest, which may be the time that an investor most wants to sell their Shares. The risk of wide bid and ask spreads may be especially pronounced for smaller funds. In addition, increased market volatility may cause wider spreads.

Valuation Risk

When valuing the Fund's portfolio investments, if a market quotation is readily available for a portfolio investment, that investment will generally be valued at the market value. However, unlike publicly traded securities that trade on national securities exchanges, there is no central place or exchange for trading most debt securities and thus readily available market quotations are unavailable. Debt securities generally trade on an "over-the-counter" market. Due to the lack of centralized information and trading, and variations in lot sizes of certain debt securities, the valuation of debt securities may carry more uncertainty and risk than that of publicly traded securities. Debt securities are commonly valued by third-party pricing service providers that utilize a range of market-based inputs and assumptions, including readily available market quotations obtained from broker-dealers making markets in such securities, cash flows and transactions for comparable instruments. However, because the available information is less reliable and more subjective, elements of judgment may play a greater role in valuation of debt securities than for other types of securities. Additionally, pricing service providers generally price debt securities assuming orderly transactions of an institutional "round lot" size, but some trades may occur in smaller, "odd lot" sizes, often at lower prices than institutional round lot trades. Valuing the Fund's investments using fair value pricing provided by pricing service providers will result in prices that may differ from current market valuations and that may not be the prices at which those investments could have been sold during the period in which the particular fair values were used. It is possible that the fair value determined for a portfolio instrument may be materially different from the value that could be realized upon the sale of that instrument.

Variable and Floating Rate Instruments Risk

When valuing the Fund's portfolio investments, if a market quotation is readily available for a portfolio investment, that investment will generally be valued at the market value. However, unlike publicly traded securities that trade on national securities exchanges, there is no central place or exchange for trading most debt securities and thus readily available market quotations are unavailable. Debt securities generally trade on an "over-the-counter" market. Due to the lack of centralized information and trading, and variations in lot sizes of certain debt securities, the valuation of debt securities may carry more uncertainty and risk than that of publicly traded securities. Debt securities are commonly valued by third-party pricing service providers that utilize a range of market-based inputs and assumptions, including readily available market quotations obtained from broker-dealers making markets in such securities, cash flows and transactions for comparable instruments. However, because the available information is less reliable and more subjective, elements of judgment may play a greater role in valuation of debt securities than for other types of securities. Additionally, pricing service providers generally price debt securities assuming orderly transactions of an institutional "round lot" size, but some trades may occur in smaller, "odd lot" sizes, often at lower prices than institutional round lot trades. Valuing the Fund's investments using fair value pricing provided by pricing service providers will result in prices that may differ from current market valuations and that may not be the prices at which those investments could have been sold during the period in which the particular fair values were used. It is possible that the fair value determined for a portfolio instrument may be materially different from the value that could be realized upon the sale of that instrument.

Zero Coupon Securities Risk

Zero coupon securities do not pay interest on a current basis. The interest earned on zero coupon securities is, implicitly, automatically compounded and paid out at maturity. Zero coupon securities are subject to substantially greater market price fluctuations during periods of changing prevailing interest rates than are comparable securities that make current distributions of interest.

Performance Information

The following bar chart and table provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compare with its benchmark over time. The table that follows the bar chart shows the Fund's average annual

total return, both before and after taxes. The Bloomberg U.S. Aggregate Bond Index is a broad-based benchmark that measures the investment grade, U.S. dollar-denominated, fixed-rate taxable bond market, including Treasuries, government-related and corporate securities, mortgage-backed securities (agency fixed-rate and hybrid adjustable rate mortgage pass-throughs), asset-backed securities and commercial mortgage-backed securities.

All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future. Performance reflects fee waivers and/or expense reimbursement in effect, if such waivers or reimbursements were not in place, the Fund's performance would be reduced. Fund performance current to the most recent month-end is available by calling 1-888-474-7725 or by visiting newyorklifeinvestments.com/etf.

The Fund's year-to-date total return as of June 30, 2023 was 2.81%.

Best and Worst Quarter Returns (for the period reflected in the bar chart above)

	Return	Quarter/Year
Highest Return	1.66%	4Q/2022
Lowest Return	-6.02%	2Q/2022

Average Annual Total Returns as of December 31, 2022

	1 Year	Since Inception ⁽¹⁾
Returns before taxes	-14.31%	-9.60%
Returns after taxes on distributions ⁽²⁾	-15.36%	-10.56%
Returns after taxes on distributions and sale of Fund Shares ⁽²⁾	-8.45%	-7.63%
Bloomberg U.S. Aggregate Bond Index (reflects no deduction for fees, expenses or taxes)	-13.01%	-8.70%

(1) The Fund commenced operations on June 29, 2021.

(2) After-tax returns are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on your tax situation and may differ from those shown and are not relevant if you hold your Shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts. In some cases the return after taxes may exceed the return before taxes due to an assumed tax benefit from any losses on a sale of Fund Shares at the end of the measurement period.

Investment Advisor and Subadvisor

IndexIQ Advisors LLC is the investment advisor to the Fund.

MacKay Shields LLC is the investment subadvisor of the Fund.

Portfolio Managers

The professionals of the subadvisor that are jointly and primarily responsible for the day-to-day management of the Fund are:

<u>Name & Title</u>	<u>Length of Service as Fund's Portfolio Manager</u>
Neil Moriarty, III, Senior Managing Director	Since Fund's inception
Michael DePalma, Managing Director	Since May 2023
Tom Musmanno, Managing Director	Since May 2023
Lesya Paisley, Director	Since August 2022
Shu-Yang Tan, Managing Director	Since May 2023
Valentina Chen, Senior Managing Director	Since August 2023
Philip Fielding, Senior Managing Director	Since August 2023

Ms. Chen and Mr. Fielding are part of MacKay Shields UK LLP, an indirect, wholly-owned subsidiary of the Subadvisor, and provide services to the Fund under an arrangement with the Subadvisor.

Purchase and Sale of Fund Shares

Unlike conventional mutual funds, the Fund issues and redeems Shares on a continuous basis, at NAV, only in large blocks of Shares called "Creation Units." Individual Shares of the Fund may only be purchased and sold on the secondary market through a broker-dealer. Since Shares of the Fund trade on securities exchanges in the secondary market at their market price rather than their NAV, the Fund's Shares may trade at a price greater than (premium) or less than (discount) the Fund's NAV. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares of the Fund (bid) and the lowest price a seller is willing to accept for Shares of the Fund (ask) when buying or selling Shares in the secondary market (the "bid-ask spread"). Recent information, including the Fund's NAV, market price, premiums and discounts, and bid-ask spreads, is available online at newyorklifeinvestments.com/eff.

Shares of the Fund will trade at market price rather than NAV. As such, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

Tax Information

The Fund's distributions are expected to be taxed as ordinary income, qualified dividend income and/or capital gains, unless you are investing through a tax-deferred arrangement, such as a 401(k) plan or individual retirement account. However, subsequent withdrawals from such a tax-advantaged account may be subject to U.S. federal income tax. You should consult your tax advisor about your specific situation.

Financial Intermediary Compensation

If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Advisor or other related companies may pay the intermediary for marketing activities and presentations, educational training programs, conferences, the development of technology platforms and reporting systems or other services related to the sale or promotion of the Fund. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

Summary Information

IQ MacKay ESG High Income ETF

Investment Objective

The IQ MacKay ESG High Income ETF (the "Fund") seeks to maximize current income, while incorporating the Subadvisor's ESG investment strategy.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund ("Shares"). Investors may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example set forth below.

Shareholder Fees (fees paid directly from your investment): None

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment):

Management Fee	0.40%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.41%
Total Annual Fund Operating Expenses	0.81%
Expense Waiver/Reimbursement ^(a)	0.41%
Total Annual Fund Operating Expenses After Expense Waiver/Reimbursement	0.40%

(a) IndexIQ Advisors LLC (the "Advisor") has contractually agreed to waive or reduce its management fee and/or reimburse expenses of the Fund in an amount that limits "Total Annual Fund Operating Expenses" (exclusive of interest, taxes, brokerage fees and commissions, dividends paid on short sales, acquired fund fees and expenses, and extraordinary expenses) to not more than 0.40% of the average daily net assets of the Fund. The agreement will remain in effect permanently unless terminated by the Board of Trustees of the Fund.

Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain at current levels. The return of 5% and estimated expenses are for illustration purposes only, and should not be considered indicators of expected Fund expenses or performance, which may be greater or less than the estimates. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

<u>1 Year</u>	<u>3 Years</u>	<u>5 Years</u>	<u>10 Years</u>
\$41	\$128	\$224	\$505

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual Fund operating expenses or in the example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rates was 30% of the average value of its portfolio. This rate excludes the value of the portfolio securities received or delivered as a result of in-kind creations or redemptions of the Shares.

Principal Investment Strategies

The Fund seeks to achieve its investment objective through investments in debt instruments offering attractive levels of yield. This Fund expects to invest primarily in U.S. corporate debt securities, non-U.S. corporate debt securities, convertible corporate securities, loans and loan participation interests that are rated below investment grade by a nationally recognized statistical rating organization ("NRSRO") (such securities rated lower than BBB- and Baa3), or, if unrated, judged to be of comparable quality by MacKay Shields LLC (the "Subadvisor"). Securities that are rated below investment grade by NRSROs are commonly referred to as "high-yield securities" or "junk bonds." If NRSROs assign different ratings to the same instrument for purposes of determining the security's credit quality, the Fund will use the middle rating when three NRSROs rate the security. For securities where only two NRSROs rate the security, the Fund will use the lower rating. If only one rating is available for a security, the Fund will use that rating. The Fund may invest without limitation in below investment grade securities.

Under normal circumstances, the Fund will invest at least 80% of its assets in instruments that meet the Subadvisor's environmental, social, and corporate governance (ESG) criteria. The Subadvisor analyzes and applies its ESG criteria to corporate issuers and the Subadvisor's ESG analysis includes its own proprietary assessments of ESG factors as well as standards developed and set forth by recognized organizations such as entities sponsored by the United Nations.

The Fund will not invest in instruments of corporate issuers that have been determined by the Subadvisor, through its own analysis or using third party data, to not be in compliance with the Principles of the UN Global Compact. The Fund will also not invest in instruments of corporate issuers that have been determined by the Subadvisor, through its own analysis or using third party data, to: (i) derive greater than 5% of their revenue from (a) the mining of coal, (b) the manufacture or production of tobacco, (c) the extraction or processing of oil sands, or (d) arctic oil and gas extraction; or (ii) the manufacture of controversial weapons (such as anti-personnel mines, biological weapons, chemical weapons, cluster munitions, depleted uranium ammunition and armor, incendiary weapons, nuclear weapons, and white phosphorus munitions).

The Fund may hold cash or invest in short-term instruments during times when the Subadvisor is unable to identify attractive high income securities. To the extent possible, the Fund will attempt to hedge its foreign currency exposure against the U.S. dollar. The Fund may also invest in derivatives, such as futures, forwards, options, forward commitments and swap agreements, including interest rate, total return and credit default swap agreements, to seek to enhance returns or to reduce the risk of loss by hedging certain of its holdings or manage duration. In times of unusual or adverse market, economic or political conditions, the Fund may invest without limit in investment grade securities and may invest in U.S. government securities or other high quality money market instruments. To the extent the Fund is invested in cash, investment grade debt or other high-quality instruments, the yield on these investments tends to be lower than the yield on other investments normally purchased by the Fund. Although investing heavily in these investments may help to preserve the Fund's assets, it may not be consistent with the Fund's primary investment objective and may limit the Fund's ability to achieve a high level of income.

The Fund has adopted a non-fundamental policy that it may invest up to 20% of its net assets in common stocks and other equity-related securities, including in connection with restructurings.

The Fund may invest up to 10% of its net assets in underlying funds, including exchange-traded funds (ETFs), mutual funds and closed-end funds.

The Fund may invest in mortgage dollar rolls, to-be-announced ("TBA") securities transactions, variable rate notes and floating rate notes. The Fund may purchase or sell securities on a when-issued, delayed delivery or forward commitment basis. The Fund may, without limitation, seek to obtain market exposure to the securities in which it primarily invests by entering into a series of purchase and sale contracts or by using other investment techniques (such as buy backs or dollar rolls).

The Investment Process: The Subadvisor utilizes a top-down and bottom-up approach in its investment decision-making process. The top-down element of the investment process incorporates an analysis of the important economic underpinnings of the market's risk cycle. The investment team believes that monetary policy, as dictated by central bank actions, is a significant contributor to credit creation and an important driver of the inflection points in the market cycle.

The bottom-up component of the investment team's investment process feeds into its macro analysis to help identify significant changes in financial market conditions, real economic developments and areas of credit excess. Credits are run through a multi-factor analysis of financial and non-financial risk characteristics seeking to gain a complete picture of the credit profile of an issuer prior to investment.

The Subadvisor's ESG analysis evaluates securities using environmental, social, corporate governance factors. The Subadvisor considers these ESG criteria systematically throughout the Fund's investment process. The Subadvisor's ESG analysis evaluates each issuer relative to other issuers in the relevant peer group and asset class. The Subadvisor's ESG analysis is a proprietary process developed by the Subadvisor that assigns each issuer separate "environmental," "social," and "governance" scores based on ESG factors deemed most material to that asset class and peer group.

Although the Subadvisor does not use third party ESG scores to calculate an issuer's ESG score, as described further below, the Subadvisor may use third-party research to help identify sustainability issues that are likely to affect the financial condition or operating performance of an issuer.

The Subadvisor's scoring process seeks to rate issuers as "outperforming," "average," or "underperforming" within each of the environmental, social and governance factors versus peers. The issuer's score in each of the three factors is combined on an equally weighted basis to determine the issuer's overall ESG score. In addition to an issuer's current overall score, the Subadvisor also considers the historical trend in an issuer's score and seeks to identify opportunities where a company has improved its ESG practices and is expected to continue to demonstrate further improvement. A security meets the Subadvisor's ESG criteria if it: (i) has received a score of at least "average"; or (ii) if the issuer's current score is below "average," the issuer has demonstrated a trend of improving scores. During the portfolio construction process, the Subadvisor will assess overall environmental, social and governance scores across the portfolio, as well as by overall issuer score.

The Subadvisor's process for corporate credit ESG analysis includes evaluating material ESG factors on an industry-by-industry basis and issuer performance of those factors is based on under/outperformance of industry peers. Factors considered as part of the Subadvisor's ESG analysis of corporate issuers include:

- Environmental factors such as the issuer's ability to identify and mitigate pecuniary environmental risk exposure, predominantly arising from regulatory factors in a transition to a low carbon economy.
- Social factors such as an issuer's ability to effectively identify and mitigate pecuniary social risk exposure, such as human capital management, customer privacy and data security.
- Governance factors such as assessing an issuer's quality of management and business oversight.

The Subadvisor's engagement activities may include, but are not limited to, in-person meetings and phone calls with issuers to understand their sustainability goals and business practices as well as other industry participants engaged in ESG and sustainability initiatives. This engagement allows the Subadvisor to better align mutual interests while impacting change.

The Subadvisor may sell a security if it no longer believes that the security will contribute to meeting the investment objective of the Fund or no longer meets its ESG standards. In considering whether to sell a security, the Subadvisor may evaluate, among other things, the condition of the economy, meaningful changes in the issuer's financial condition, changes in the condition and outlook.

Principal Risks

As with all investments, there are certain risks of investing in the Fund. The Fund's Shares will change in value and you could lose money by investing in the Fund. An investment in the Fund does not represent a complete investment program. An investment in the Fund is not a bank deposit and it is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency, the Advisor or any of its affiliates. You should consider carefully the following risks before investing in the Fund.

Authorized Participant Concentration Risk

Only certain large institutions may engage in creation or redemption transactions directly with the Fund (each, an "Authorized Participant"). The Fund has a limited number of institutions that may act as Authorized Participants on an agency basis (i.e., on behalf of other market participants). To the extent that those Authorized Participants exit the business or are unable to proceed with creation and/or redemption orders with the Fund and no other Authorized Participant is able to step forward to engage in creation and redemption transactions with the Fund, Shares may be more likely to trade at a premium or discount to NAV and possibly face trading halts and/or delisting.

Cash Transactions Risk

The Fund currently intends to effect creations and redemptions principally for cash, rather than for in-kind securities. For this reason, the Fund may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds. The Fund may recognize a capital gain on these sales that might not have been incurred if the Fund had made a redemption in-kind. This may decrease the tax efficiency of the Fund compared to ETFs that utilize an in-kind redemption process.

Convertible Securities Risk

A convertible security has characteristics of both equity and debt securities and, as a result, is exposed to risks that are typically associated with both types of securities. Convertible securities are typically subordinate to an issuer's other debt obligations. Issuers of convertible securities may be more vulnerable to changes in the economy, such as a recession or a sustained period of rising interest rates, which could affect their ability to make interest and principal payments. If an issuer stops making interest and/or principal payments, the Fund could lose its entire investment.

Corporate Bonds Risk

Corporate bonds are debt obligations issued by corporations. Corporate bonds are generally used by corporations to borrow money from investors. The investment return of corporate bonds reflects interest earned on the security and changes in the market value of the security. The market value of a corporate bond may be affected by changes in the market rate of interest, the credit rating of the issuer, the issuer's performance and perceptions of the issuer in the marketplace. There is a risk that the issuers of the securities may not be able to meet their obligations on interest or principal payments at the time called for by an instrument.

Counterparty Risk

A counterparty (the other party to a transaction or an agreement or the party with whom the Fund executes transactions) to a transaction with the Fund may be unable or unwilling to make timely principal, interest, settlement or margin payments, fulfill the delivery conditions of the contract or transaction, or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations the Fund will have contractual remedies pursuant to the agreements related to the transaction, but the Fund may be unable to terminate or realize any gain on the investment or transaction, resulting in a loss to the Fund. The Fund may experience significant delays in obtaining any recovery in an insolvency, bankruptcy, or other reorganization proceeding involving a counterparty (including recovery of any collateral posted by it) and may obtain limited or no recovery in such circumstances.

Credit Risk

Credit risk is the risk that the issuer or guarantor of a debt instrument or the counterparty to a derivatives contract, repurchase agreement or loan of portfolio securities will be unable or unwilling to make its timely interest and/or principal payments when due or otherwise honor its obligations. Changes in an issuer's or counterparty's credit rating or the market's perception of an issuer's or counterparty's creditworthiness may also adversely affect the value of the Fund's investment in that issuer. The degree of credit risk depends on an issuer's or counterparty's financial condition and on the terms of an obligation.

Cyber Security Risk

The Fund is susceptible to operational risks through breaches in cyber security. Such events may cause the Fund to lose proprietary information, suffer data corruption or lose operational capacity and could cause the Fund to incur regulatory penalties, reputational damage, additional compliance costs associated with corrective measures and/or financial loss. In addition, cyber security breaches of the securities issuers or the Fund's third-party service providers can also subject the Fund to many of the same risks associated with direct cyber security breaches. Although the Fund has established risk management systems designed to reduce the risks associated with cyber security, there is no guarantee that such efforts will succeed.

Debt Securities Risk

The risks of investing in debt securities include (without limitation): (i) credit risk, e.g., the issuer or guarantor of a debt security may be unable or unwilling (or be perceived as unable or unwilling) to make timely principal and/or interest payments or otherwise honor its obligations; (ii) interest rate risk, e.g., when interest rates go up, the value of a debt security generally goes down, and when interest rates go down, the value of a debt security generally goes up; (iii) liquidity risk and valuation risk, e.g., debt securities generally do not trade on a securities exchange, making them generally less liquid and more difficult to value than common stock; (iv) call risk and income risk, e.g., during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund's income if the proceeds are reinvested at lower interest rates; and (v) extension risk, e.g., if interest rates rise, repayments of debt securities may occur more slowly than anticipated by the market, which may drive the prices of these securities down because their interest rates are lower than the current interest rate and the securities remain outstanding longer. Debt securities most frequently trade in institutional round lot size transactions. If the Fund purchases bonds in amounts less than the institutional round lot size, which are frequently referred to as "odd" lots, the odd lot size positions may have more price volatility than institutional round lot size positions. The Fund uses a third-party pricing service to value bond holdings and the pricing service values bonds assuming orderly transactions of an institutional round lot size.

Derivatives Risk

Derivatives are investments whose value depends on (or is derived from) the value of an underlying instrument, such as a security, asset, reference rate or index and involve risks different from, and possibly greater than, the risks associated with other investments. These risks include: (i) the risk that the counterparty to a derivatives transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset. Derivative

prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to, changing supply and demand relationships, government programs and policies, national and international political and economic events, changes in interest rates, inflation and deflation, and changes in supply and demand relationships. Unlike other investments, derivative contracts often have leverage inherent in their terms. The use of leveraged derivatives can magnify potential for gain or loss and, therefore, amplify the effects of market volatility on the Fund's Share price. The effects of leverage may also cause the Fund to liquidate portfolio positions when it would not be advantageous to do so.

Equity Securities Risk

Investments in common stocks and other equity securities are particularly subject to the risk of changes in investors' perceptions of the financial condition of an issuer, conditions affecting equity markets generally and political and/or economic events. Equity prices may also be particularly sensitive to rising interest rates, as the cost of capital rises and borrowing costs increase. Holders of an issuer's common stock may be subject to greater risks than holders of its preferred stock and debt securities because common stockholders' claims are subordinated to those of holders of preferred stocks and debt securities upon the bankruptcy of an issuer.

Exchange Traded Products Risk

Unlike an investment in a mutual fund, the value of the Fund's investment in other exchange-traded funds or exchange-traded investment products ("ETPs") is based on its market price (rather than NAV) and the Fund could lose money due to premiums/discounts of the ETP (which could cause the Fund to buy shares at market prices that are higher than their value or sell shares at market prices that are lower than their value); the failure of an active trading market to develop; or exchange trading halts or delistings. An investment in the Fund will entail more costs and expenses than a direct investment in any underlying ETP. As the Fund's allocations to underlying ETPs changes, or the expense ratio of underlying ETPs change, the operating expenses borne by the Fund from such investments may increase or decrease. Federal law prohibits the Fund from acquiring investment company shares, including shares of other registered investment companies (including ETFs), in excess of specific thresholds unless exempted by rule, regulation or exemptive order. These prohibitions may prevent the Fund from allocating its investment in an optimal manner.

Focused Investment Risk

To the extent that the Fund invests a large percentage of its assets in a single asset class or the securities of issuers within the same country, group of countries, region, industry, group of industries or sector, an adverse economic, market, political or regulatory development may affect the value of the Fund's investments more than if the Fund were more broadly diversified. Different asset classes, countries, groups of countries, regions, industries, groups of industries or sectors tend to go through cycles of outperformance and underperformance in comparison to each other and to the general financial markets.

Foreign Currency Forward Contracts Risk

When trading in foreign currency forward contracts, the Fund will contract with a foreign or domestic bank, or a foreign or domestic securities dealer, to make or take future delivery of a specified amount of a particular currency. There are no limitations on daily price moves in such forward contracts, and banks and dealers are not required to continue to make markets in such contracts. Governmental imposition of credit controls might limit any such forward contract trading. Foreign currency forward contracts involve certain risks, including the risk of failure of the counterparty to perform its obligations under the contract and the risk that the use of forward contracts may not serve as a complete hedge because of an imperfect correlation between movements in the prices of the contracts and the prices of the currencies hedged.

Foreign Securities Risk

Investments in the securities of non-U.S. issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Some countries and regions have experienced security concerns, war or threats of war and aggression, terrorism, economic uncertainty, natural and environmental disasters and/or systemic market dislocations that have led, and in the future may lead, to increased short-term market volatility and may have adverse long-term effects on the U.S. and world economies and markets generally. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. issuers, and therefore not all material information will be available. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact the Fund's ability to invest in

foreign securities or may prevent the Fund from repatriating its investments. Less developed securities markets are more likely to experience problems with the clearing and settling of trades, as well as the holding of securities by local banks, agents and depositories. The less developed a country's securities market is, the greater the likelihood of clearing, custody and trade settlement problems.

Foreign Securities Valuation Risk

The Fund's value may be impacted by events that cause the fair value of foreign securities to materially change between the close of the local exchange on which they trade and the time at which the Fund prices its Shares. Additionally, because foreign exchanges on which securities held by the Fund may be open on days when the Fund does not price its Shares, the potential exists for the value of the securities in the Fund's portfolio to change on days when shareholders will not be able to purchase or sell the Fund's Shares.

Futures Contracts Risk

Futures contracts are typically exchange-traded contracts that call for the future delivery of an asset at a certain price and date, or cash settlement of the terms of the contract. There may be an imperfect correlation between the changes in market value of the securities held by the Fund and the prices of futures contracts. There may not be a liquid secondary market for the futures contracts and the Fund may not be able to enter into a closing transaction. Exchanges may also limit the number of positions that can be held or controlled by the Fund, thus limiting the ability of the Fund to implement its investment strategy. Futures markets are highly volatile and the use of futures may increase the Fund's volatility. The value of an investment in the Fund may change quickly and without warning.

High Yield Securities Risk

High yield securities, or "junk" bonds, generally offer a higher current yield than the yield available from higher grade issues, but are subject to greater market fluctuations, are less liquid and provide a greater risk of loss than investment grade securities, and therefore are considered to be highly speculative. In general, high yield securities may have a greater risk of default than other types of securities and could cause income and principal losses for the Fund.

Income Risk

The Fund's income may decline when interest rates fall or if there are defaults in its portfolio. This decline can occur because the Fund may subsequently invest in lower-yielding securities when securities in its portfolio mature or the Fund otherwise needs to purchase additional securities.

Interest Rate Risk

An increase in interest rates may cause the value of securities held by the Fund to decline. Fixed income securities with longer durations tend to be more sensitive to changes in interest rates, making them more volatile than securities with shorter durations or floating or adjustable interest rates. The negative impact on the Fund from potential interest rate increases could be swift and significant, including falling market values, increased redemptions and reduced liquidity. The Fund may be subject to a greater risk of rising interest rates during periods of low interest rates.

When interest rates rise, certain obligations will be paid off by the issuer (or other obligated party) more slowly than anticipated, causing the value of these securities to fall. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value. The value of securities with longer maturities generally changes more in response to changes in interest rates than does the value of securities with shorter maturities. During periods of falling interest rates, an issuer of a callable security held by the Fund may "call" or repay the security before its stated maturity, which may result in the Fund having to reinvest the proceeds in securities with lower yields, resulting in a decline in the Fund's income, or in securities with greater risks or with other less favorable features.

Investment Style Risk

The Fund seeks to allocate investment exposure based upon a particular style of investing. Different investment styles tend to shift in and out of favor depending upon market and economic conditions and investor sentiment. As a consequence, the Fund may underperform as compared to the market generally or to other funds that invest in similar asset classes but employ different investment styles. Further, there is no guarantee that the Fund will accurately or optimally utilize the investment style or that it will successfully provide the desired investment exposure.

- *ESG Investing Style Risk.* The Fund seeks exposure to the securities of companies meeting environmental, social and corporate governance investing criteria. The Fund excludes or limits exposure to securities of

certain issuers for non-financial reasons, and the Fund may forgo some market opportunities available to funds that do not use these criteria. The application of ESG investing criteria may affect the Fund's exposure to certain sectors or types of investments and may impact the Fund's relative investment performance depending on whether such sectors or investments are in or out of favor in the market. ESG investing is subjective by nature, and therefore offers no guarantee that the ESG criteria utilized by the Subadvisor will accurately provide exposure to issuers meeting environmental, social and corporate governance criteria or any judgment exercised by the Subadvisor will reflect the beliefs or values of any particular investor. In addition, ESG investing is dependent upon information and data that may be incomplete, inaccurate or unavailable, which could adversely affect the analysis of the factors relevant to a particular investment.

Issuer Risk

The performance of the Fund depends on the performance of individual securities to which the Fund has exposure. Changes to the financial condition or credit rating of an issuer of those securities may cause the value of the securities to decline.

Liquidity Risk

Liquidity risk exists when particular investments are difficult to purchase or sell. Certain investments may be subject to restrictions on resale, trade over-the-counter or in limited volume, or lack an active trading market. Accordingly, the Fund may not be able to sell or close out of such investments at favorable times or prices (or at all), or at the prices approximating those at which the Fund currently values them. Illiquid securities may trade at a discount from comparable, more liquid investments and may be subject to wide fluctuations in market value.

Market Risk

Market risks include political, regulatory, market and economic developments, including developments that impact specific economic sectors, industries or segments of the market, which may affect the Fund's value. Turbulence in financial markets, tariffs and other protectionist measures, political developments and uncertainty, central bank policy, and reduced liquidity in equity, credit and fixed income markets may negatively affect many issuers worldwide, which could have an adverse effect on the Fund. During a general downturn in the securities markets, multiple asset classes may be negatively affected. Geopolitical and other events, including war, terrorism, economic uncertainty, trade disputes, public health crises and related geopolitical events have led, and in the future may lead, to disruptions in the U.S. and world economies and markets, which may increase financial market volatility and have significant adverse direct or indirect effects on the Fund and its investments. Market disruptions could cause the Fund to lose money, experience significant redemptions, and encounter operational difficulties. Although multiple asset classes may be affected by a market disruption, the duration and effects may not be the same for all types of assets.

Money Market/Short-Term Securities Risk

To the extent the Fund holds cash or invests in money market or short-term securities, the Fund may be less likely to achieve its investment objective. In addition, it is possible that the Fund's investments in these instruments could lose money.

Operational Risk

The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund and Advisor seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address significant operational risks.

Option Contracts Risk

The use of option contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of option contracts are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, changes in interest or currency exchange rates, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. There may at times be an imperfect correlation between the movement in values option contracts and the reference asset, and there may at times not be a liquid secondary market for certain option contracts.

Portfolio Management Risk

The Fund is subject to portfolio management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result or, while it may be the desired result, may underperform other types of investment strategies. The Subadvisor may give consideration to certain ESG criteria when evaluating an investment opportunity. The application of ESG criteria may result in the Fund (i) having exposure to certain securities or industry sectors that are significantly different than the composition of the Fund's benchmark; and (ii) performing differently than other funds and strategies in its peer group that do not take into account ESG criteria or the Fund's benchmark. There can be no guarantee that the Fund will meet its investment objective(s).

Risks of Investing in Loans

Investments in loans are subject to the same risks as investments in other types of debt securities, including credit risk, interest rate risk, liquidity risk and valuation risk that may be heightened because of the limited public information available regarding loans and because loan borrowers may be leveraged and tend to be more adversely affected by changes in market or economic conditions. Default in the payment of interest or principal on a loan will result in a reduction in the value of the loan and consequently a reduction in the value of an investment in that loan. If an investor holds a loan through another financial institution or relies on a financial institution to administer the loan, its receipt of principal and interest on the loan may be subject to the credit risk of that financial institution. It is possible that any collateral securing a loan may be insufficient or unavailable to the investor, and that the investor's rights to collateral may be limited by bankruptcy or insolvency laws. Additionally, there is no central clearinghouse for loan trades and the loan market has not established enforceable settlement standards or remedies for failure to settle. Consequently, the secondary market for loans may be subject to irregular trading activity, wide bid/ask spreads and extended trade settlement periods (in some cases longer than 7 days), which may cause an investor to be unable to realize the full value of its investment. In addition, loans are generally not registered with the SEC under the Securities Act of 1933, as amended, and may not be considered "securities," and an investor may not be entitled to rely on the anti-fraud protections of the federal securities laws. An investment in loans made to non-U.S. borrowers may be affected by political and social instability, changes in economic or taxation policies, difficulties in enforcing obligations, decreased liquidity and increased volatility. Foreign borrowers may be subject to less regulation, resulting in less publicly available information about the borrowers.

The loan market has seen a significant increase in loans with weaker lender protections including, but not limited to, limited financial maintenance covenants or, in some cases, no financial maintenance covenants (i.e., "covenant-lite loans") that would typically be included in a traditional loan agreement and general weakening of other restrictive covenants applicable to the borrower such as limitations on incurrence of additional debt, restrictions on payments of junior debt or restrictions on dividends and distributions. Weaker lender protections such as the absence of financial maintenance covenants in a loan agreement and the inclusion of "borrower-favorable" terms may impact recovery values and/or trading levels of loans in the future. The absence of financial maintenance covenants in a loan agreement generally means that the lender may not be able to declare a default if financial performance deteriorates. This may hinder an investor's ability to reprice credit risk associated with a particular borrower and reduce the investor's ability to restructure a problematic loan and mitigate potential loss. As a result, an investor's exposure to losses on investments in loans may be increased, especially during a downturn in the credit cycle or changes in market or economic conditions.

Risks of Loan Assignments and Participations

The purchaser of an assignment typically succeeds to all the rights and obligations of the assigning institution and becomes a lender under the credit agreement with respect to the debt obligation; however, the purchaser of an assignment may not be able to unilaterally enforce all rights and remedies under the loan and with regard to any associated collateral. Because assignments may be arranged through private negotiations between potential assignees and potential assignors, the rights and obligations acquired by the purchaser of an assignment may differ from, and be more limited than, those held by the assigning lender. In addition, if the loan is foreclosed, the purchaser of an assignment could become part owner of any collateral and could bear the costs and liabilities of owning and disposing of the collateral. To the extent an investor sells a loan by way of assignment, the investor may be required to pass along a portion of any fees to which the investor was entitled under the loan. In connection with purchasing participations, such purchaser generally will have no right to enforce compliance by the borrower with the terms of the loan agreement relating to the loan, nor any rights

of set-off against the borrower, and the purchaser may not directly benefit from any collateral supporting the loan in which it has purchased the participation. As a result, the purchaser will be subject to the credit risk of both the borrower and the lender that is selling the participation. In the event of the insolvency of the lender selling a participation, the purchaser may be treated as a general creditor of the lender and may not benefit from any set-off between the lender and the borrower.

Secondary Market Trading Risk

Although the Fund's Shares are listed for trading on one or more securities exchanges, there can be no assurance that an active trading market for such Shares will develop or be maintained by market makers or Authorized Participants. The trading of Shares on securities exchanges is subject to the risk of irregular trading activity. Securities exchanges have requirements that must be met in order for Shares to be listed. There can be no assurance that the requirements of an exchange necessary to maintain the listing of Shares will continue to be met. This risk is particularly acute for funds that fail to attract a large number of shareholders. Pursuant to an exchange's "circuit breaker" rules, trading in the Fund's Shares may be halted due to extraordinary market volatility. Additionally, market makers are under no obligation to make a market in the Fund's Shares and Authorized Participants are not obligated to submit purchase or redemption orders for creation units. In the event market makers cease making a market in the Fund's Shares or Authorized Participants stop submitting purchase or redemption orders for creation units, the Fund's Shares may trade at a larger premium or discount to its NAV.

Swap Agreements Risk

Swap agreements may involve greater risks than direct investment in securities as they may be leveraged and are subject to credit risk, counterparty risk, liquidity risk and valuation risk. A swap agreement could result in losses if the underlying reference or asset does not perform as anticipated. In addition, many swaps trade over-the-counter and may be considered illiquid. It may not be possible for the Fund to liquidate a swap position at an advantageous time or price, which may result in significant losses.

Trading Price Risk

Although it is generally expected that the market price of the Fund's Shares will approximate the Fund's NAV, there may be times when the market price and the NAV vary significantly. Shares of the Fund trade on securities exchanges at prices at, above or below the Fund's most recent NAV. The NAV of the Fund is calculated at the end of each business day and fluctuates with changes in the market value of the Fund's holdings. The trading price of the Fund's Shares fluctuates continuously throughout trading hours based on market supply of and demand for Shares and the Fund's NAV, among other reasons. As a result, the trading prices of the Fund's Shares may deviate significantly from NAV during periods of market volatility. The market price of the Fund's Shares during the trading day, like the price of any exchange-traded security, includes a "bid/ask" spread charged by market makers or other participants that trade the Shares. In times of severe market disruption, the bid/ask spread can increase significantly. At those times, Shares are most likely to be traded at a discount to NAV, and the discount is likely to be greatest when the price of Shares is falling fastest, which may be the time that an investor most wants to sell their Shares. The risk of wide bid and ask spreads may be especially pronounced for smaller funds. In addition, increased market volatility may cause wider spreads.

Valuation Risk

When valuing the Fund's portfolio investments, if a market quotation is readily available for a portfolio investment, that investment will generally be valued at the market value. However, unlike publicly traded securities that trade on national securities exchanges, there is no central place or exchange for trading most debt securities and thus readily available market quotations are unavailable. Debt securities generally trade on an "over-the-counter" market. Due to the lack of centralized information and trading, and variations in lot sizes of certain debt securities, the valuation of debt securities may carry more uncertainty and risk than that of publicly traded securities. Debt securities are commonly valued by third-party pricing service providers that utilize a range of market-based inputs and assumptions, including readily available market quotations obtained from broker-dealers making markets in such securities, cash flows and transactions for comparable instruments. However, because the available information is less reliable and more subjective, elements of judgment may play a greater role in valuation of debt securities than for other types of securities. Additionally, pricing service providers generally price debt securities assuming orderly transactions of an institutional "round lot" size, but some trades may occur in smaller, "odd lot" sizes, often at lower prices than institutional round lot trades. Valuing the Fund's investments using fair value pricing provided by pricing service providers will result in prices

that may differ from current market valuations and that may not be the prices at which those investments could have been sold during the period in which the particular fair values were used. It is possible that the fair value determined for a portfolio instrument may be materially different from the value that could be realized upon the sale of that instrument.

Performance Information

As of the date of this Prospectus, the Fund has not yet completed a full calendar year of operations and therefore does not report its performance information. The Fund's performance current to the most recent month-end is available by calling 1-888-474-7725 or by visiting newyorklifeinvestments.com/etf.

Investment Advisor and Subadvisor

IndexIQ Advisors LLC is the investment advisor to the Fund.

MacKay Shields LLC is the investment subadvisor to the Fund.

Portfolio Managers

The professionals of the subadvisor that are jointly and primarily responsible for the day-to-day management of the Fund are:

<u>Name & Title</u>	<u>Length of Service as Fund's Portfolio Manager</u>
Matt Jacob, Managing Director	Since Fund's inception
Cameron White, Director	Since August 2023

Purchase and Sale of Fund Shares

Unlike conventional mutual funds, the Fund issues and redeems Shares on a continuous basis, at NAV, only in large blocks of Shares called "Creation Units." Individual Shares of the Fund may only be purchased and sold on the secondary market through a broker-dealer. Since Shares of the Fund trade on securities exchanges in the secondary market at their market price rather than their NAV, the Fund's Shares may trade at a price greater than (premium) or less than (discount) the Fund's NAV. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares of the Fund (bid) and the lowest price a seller is willing to accept for Shares of the Fund (ask) when buying or selling Shares in the secondary market (the "bid-ask spread"). Recent information, including the Fund's NAV, market price, premiums and discounts, and bid-ask spreads, is available online at newyorklifeinvestments.com/etf.

Tax Information

The Fund's distributions are expected to be taxed as ordinary income, qualified dividend income and/or capital gains, unless you are investing through a tax-deferred arrangement, such as a 401(k) plan or individual retirement account. However, subsequent withdrawals from such a tax-advantaged account may be subject to U.S. federal income tax. You should consult your tax advisor about your specific situation.

Financial Intermediary Compensation

If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Advisor or other related companies may pay the intermediary for marketing activities and presentations, educational training programs, conferences, the development of technology platforms and reporting systems or other services related to the sale or promotion of the Fund. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

Summary Information

IQ MacKay Multi-Sector Income ETF

Investment Objective

The IQ MacKay Multi-Sector Income ETF (the "Fund") seeks to maximize current income and long-term capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund ("Shares"). Investors may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example set forth below.

Shareholder Fees (fees paid directly from your investment): None

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment):

Management Fee	0.40%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.34%
Total Annual Fund Operating Expenses	0.74%
Expense Waiver/Reimbursement ^(a)	0.34%
Total Annual Fund Operating Expenses After Expense Waiver/Reimbursement	0.40%

(a) IndexIQ Advisors LLC (the "Advisor") has contractually agreed to waive or reduce its management fee and/or reimburse expenses of the Fund in an amount that limits "Total Annual Fund Operating Expenses" (exclusive of interest, taxes, brokerage commissions, dividend payments on short sales, other expenditures which are capitalized in accordance with generally accepted accounting principles, other extraordinary expenses not incurred in the ordinary course of a Fund's business, and amounts, if any, payable pursuant to a plan adopted in accordance with Rule 12b-1 under the 1940 Act) to not more than 0.40% of the average daily net assets of the Fund. The agreement will remain in effect permanently unless terminated by the Board of Trustees of the Fund.

Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain at current levels. The return of 5% and estimated expenses are for illustration purposes only, and should not be considered indicators of expected Fund expenses or performance, which may be greater or less than the estimates. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

<u>1 Year</u>	<u>3 Years</u>	<u>5 Years</u>	<u>10 Years</u>
\$41	\$128	\$224	\$505

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual Fund operating expenses or in the example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rates was 131% of the average value of its portfolio. This rate excludes the value of the portfolio securities received or delivered as a result of in-kind creations or redemptions of the Shares.

Principal Investment Strategies

The Fund seeks to achieve its investment objective primarily through a flexible multisector investment process that allocates investments across the global fixed-income markets. The Fund, under normal circumstances, invests at least 80% of its assets in a diversified portfolio of debt or debt-related securities such as: debt or debt-related securities issued or guaranteed by the U.S. or foreign governments, their agencies or instrumentalities; obligations of international or supranational entities; debt or debt-related securities issued by U.S. or foreign corporate entities; zero coupon bonds; municipal bonds; mortgage-related and other asset-backed securities; bank loans; loan participation interests; convertible bonds; contingent convertible securities (CoCos); variable or floating rate debt securities; preferred securities; and hybrid instruments. The Fund may invest up to 60% of its assets in debt instruments that are rated below investment grade by a

nationally recognized statistical rating organization ("NRSRO") (such securities rated lower than BBB- and Baa3), or, if unrated, judged to be of comparable quality by the Subadvisor. Securities that are rated below investment grade by NRSROs are commonly referred to as "high-yield securities" or "junk bonds." If NRSROs assign different ratings to the same security, the Fund will use the higher rating for purposes of determining the instrument's credit quality. The securities may be denominated in U.S. or foreign currencies, and may have fixed, variable, floating or inverse floating rates of interest. The Fund may invest without limitation in securities of foreign issuers and may invest up to 20% of its assets in emerging market issuers. Up to 20% of the Fund's assets may be exposed to non-US currency risk. Generally, an issuer of a security is considered to be U.S. or foreign based on the issuer's "country of risk," as determined by a third-party service provider, such as Bloomberg. The currency exposure of non-U.S. investments may or may not be hedged. The Fund may invest up to 5% of its total assets in exchange-traded funds and other exchange-traded vehicles, mutual funds and closed-end funds.

The Fund intends to invest in a broad array of fixed-income sectors to achieve its investment objective. The Fund will not be constrained by portfolio management relative to an index. Because the Fund does not track a fixed-income index, its performance may vary at times and demonstrate low correlation to traditional fixed-income indices.

The Fund will generally seek to maintain a portfolio modified duration to worst that does not exceed the duration of the Bloomberg Barclays U.S. Universal Index by more than 1 year. Duration is a measure used to determine the sensitivity of a security's price to changes in interest rates. The longer a security's duration, the more sensitive it will be to changes in interest rates.

The Fund may invest in derivatives, such as futures, forwards, options, forward commitments and swap agreements, including interest rate, total return and credit default swaps to seek to enhance returns or reduce the risk of loss by hedging certain of its holdings or manage duration.

The Fund may invest in mortgage dollar rolls, to-be-announced ("TBA") securities transactions, variable rate notes and floating rate notes. The Fund may purchase or sell securities on a when-issued, delayed delivery or forward commitment basis. The Fund may, without limitation, seek to obtain market exposure to the securities in which it primarily invests by entering into a series of purchase and sale contracts or by using other investment techniques (such as buy backs or dollar rolls).

Investment Process: MacKay Shields LLC (the "Subadvisor") seeks to identify investment opportunities through an investment process focused on macroeconomic analysis and bottom-up security selection. The Subadvisor allocates the Fund's investments among various fixed income sectors and other securities and investments based on current and projected economic and market conditions. The Fund may invest across fixed income sectors, geographies and credit qualities, and in additional types of securities and investments.

The Subadvisor's investment process includes a risk analysis that gives consideration to a variety of security-specific risks, including but not limited to, environmental, social and governance ("ESG") risks that may have a material impact on the performance of a security. In addition to proprietary research, the Subadvisor may use screening tools and, to the extent available, third-party data to identify ESG risk factors that may not have been captured through its own research. The Subadvisor's consideration of ESG risk is weighed against other criteria and no sectors or industries are explicitly excluded from the Fund.

The Subadvisor may sell a security if it believes the security will no longer contribute to meeting the investment objective of the Fund. In considering whether to sell a security, the Subadvisor may evaluate, among other things, the condition of the domestic and foreign economies, and meaningful changes in the issuer's financial condition, including changes in the issuer's credit risk and competitiveness.

Principal Risks

As with all investments, there are certain risks of investing in the Fund. The Fund's Shares will change in value and you could lose money by investing in the Fund. An investment in the Fund does not represent a complete investment program. An investment in the Fund is not a bank deposit and it is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency, the Advisor or any of its affiliates. You should consider carefully the following risks before investing in the Fund.

Asset-Backed Securities Risk

Asset-backed securities are securities that represent interests in, and whose values and payments are based on, a "pool" of underlying assets, which may include, among others, lower-rated debt securities and corporate loans, consumer loans or mortgages and leases of property. As with other debt securities, asset-backed

securities are subject to credit risk, extension risk, interest rate risk, liquidity risk and valuation risk. The impairment of the value of collateral or other assets underlying an asset-backed security, such as a result of non-payment of loans or non-performance of underlying assets, may result in a reduction in the value of such asset-backed securities and losses to the Fund.

Authorized Participant Concentration Risk

Only certain large institutions may engage in creation or redemption transactions directly with the Fund (each, an "Authorized Participant"). The Fund has a limited number of institutions that may act as Authorized Participants on an agency basis (i.e., on behalf of other market participants). To the extent that those Authorized Participants exit the business or are unable to proceed with creation and/or redemption orders with the Fund and no other Authorized Participant is able to step forward to engage in creation and redemption transactions with the Fund, Shares may be more likely to trade at a premium or discount to NAV and possibly face trading halts and/or delisting.

Bank Loans Risk

Investments in bank loans are subject to the same risks as investments in other types of debt securities, including credit risk, interest rate risk, liquidity risk and valuation risk that may be heightened because of the limited public information available regarding bank loans and because loan borrowers may be leveraged and tend to be more adversely affected by changes in market or economic conditions. The Fund may invest in bank loans through participations in such loans. Investments in a lender's portion of a bank loan typically will result in the Fund having a contractual relationship only with such lender, not with the borrower. If the Fund holds a bank loan through another financial institution or relies on a financial institution to administer the loan, its receipt of principal and interest on the loan may be subject to the credit risk of that financial institution. It is possible that any collateral securing a loan may be insufficient or unavailable to the Fund, and that the Fund's rights to collateral may be limited by bankruptcy or insolvency laws. Additionally, there is no central clearinghouse for loan trades and the loan market has not established enforceable settlement standards or remedies for failure to settle. As such, the secondary market for bank loans may be subject to irregular trading activity, wide bid/ask spreads and extended trade settlement periods (in some cases longer than 7 days) which may cause the Fund to be unable to realize the full value of its investment.

Cash Transactions Risk

The Fund currently intends to effect creations and redemptions principally for cash, rather than for in-kind securities. For this reason, the Fund may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds. The Fund may recognize a capital gain on these sales that might not have been incurred if the Fund had made a redemption in-kind. This may decrease the tax efficiency of the Fund compared to ETFs that utilize an in-kind redemption process.

Contingent Convertible Securities Risk

Contingent convertible securities (CoCos) are hybrid securities most commonly issued by banking institutions that present risks similar to debt securities and convertible securities. CoCos are distinct in that they are intended to either convert into equity or have their principal written down upon the occurrence of certain "triggers." When an issuer's capital ratio falls below a specified trigger level, or in a regulator's discretion depending on the regulator's judgment about the issuer's solvency prospects, a CoCo may be written down, written off or converted into an equity security. Due to the contingent write-down, write-off and conversion feature, CoCos may have substantially greater risk than other securities in times of financial stress. If the trigger level is breached, the issuer's decision to write down, write off or convert a CoCo may be outside its control, and the Fund may suffer a complete loss on an investment in CoCos with no chance of recovery even if the issuer remains in existence. The value of CoCos is unpredictable and may be influenced by many factors including, without limitation: the creditworthiness of the issuer and/or fluctuations in such issuer's applicable capital ratios; supply and demand for CoCos; general market conditions and available liquidity; and economic, financial and political events that affect the issuer, its particular market or the financial markets in general.

Convertible Securities Risk

A convertible security has characteristics of both equity and debt securities and, as a result, is exposed to risks that are typically associated with both types of securities. Convertible securities are typically subordinate to an issuer's other debt obligations. Issuers of convertible securities may be more vulnerable to changes in the economy, such as a recession or a sustained period of rising interest rates, which could affect their ability to make interest and principal payments. If an issuer stops making interest and/or principal payments, the Fund could lose its entire investment.

Counterparty Risk

A counterparty (the other party to a transaction or an agreement or the party with whom the Fund executes transactions) to a transaction with the Fund may be unable or unwilling to make timely principal, interest, settlement or margin payments, fulfill the delivery conditions of the contract or transaction, or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations the Fund will have contractual remedies pursuant to the agreements related to the transaction, but the Fund may be unable to terminate or realize any gain on the investment or transaction, resulting in a loss to the Fund. The Fund may experience significant delays in obtaining any recovery in an insolvency, bankruptcy, or other reorganization proceeding involving a counterparty (including recovery of any collateral posted by it) and may obtain limited or no recovery in such circumstances.

Credit Risk

Credit risk is the risk that the issuer or guarantor of a debt instrument or the counterparty to a derivatives contract, repurchase agreement or loan of portfolio securities will be unable or unwilling to make its timely interest and/or principal payments when due or otherwise honor its obligations. Changes in an issuer's or counterparty's credit rating or the market's perception of an issuer's or counterparty's creditworthiness may also adversely affect the value of the Fund's investment in that issuer. The degree of credit risk depends on an issuer's or counterparty's financial condition and on the terms of an obligation.

Currency Risk

Investments directly in foreign (non-U.S.) currencies or in securities that trade in, and receive revenues in, foreign (non-U.S.) currencies are subject to the risk that those currencies will decline in value relative to the U.S. dollar. Currency rates in foreign countries may fluctuate significantly over short periods of time for a number of reasons, including changes in interest rates, intervention (or the failure to intervene) by U.S. or foreign governments, central banks or supranational entities such as the International Monetary Fund, or by the imposition of currency controls or other political developments in the United States or abroad.

Cyber Security Risk

The Fund is susceptible to operational risks through breaches in cyber security. Such events may cause the Fund to lose proprietary information, suffer data corruption or lose operational capacity and could cause the Fund to incur regulatory penalties, reputational damage, additional compliance costs associated with corrective measures and/or financial loss. In addition, cyber security breaches of the securities issuers or the Fund's third-party service providers can also subject the Fund to many of the same risks associated with direct cyber security breaches. Although the Fund has established risk management systems designed to reduce the risks associated with cyber security, there is no guarantee that such efforts will succeed.

Debt Securities Risk

The risks of investing in debt securities include (without limitation): (i) credit risk, e.g., the issuer or guarantor of a debt security may be unable or unwilling (or be perceived as unable or unwilling) to make timely principal and/or interest payments or otherwise honor its obligations; (ii) interest rate risk, e.g., when interest rates go up, the value of a debt security generally goes down, and when interest rates go down, the value of a debt security generally goes up; (iii) liquidity risk and valuation risk, e.g., debt securities generally do not trade on a securities exchange, making them generally less liquid and more difficult to value than common stock; (iv) call risk and income risk, e.g., during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund's income if the proceeds are reinvested at lower interest rates; and (v) extension risk, e.g., if interest rates rise, repayments of debt securities may occur more slowly than anticipated by the market, which may drive the prices of these securities down because their interest rates are lower than the current interest rate and the securities remain outstanding longer. Debt securities most frequently trade in institutional round lot size transactions. If the Fund purchases bonds in amounts less than the institutional round lot size, which are frequently referred to as "odd" lots, the odd lot size positions may have more price volatility than institutional round lot size positions. The Fund uses a third-party pricing service to value bond holdings and the pricing service values bonds assuming orderly transactions of an institutional round lot size.

Derivatives Risk

Derivatives are investments whose value depends on (or is derived from) the value of an underlying instrument, such as a security, asset, reference rate or index and involve risks different from, and possibly greater than, the risks associated with other investments. These risks include: (i) the risk that the counterparty to a derivatives transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset. Derivative

prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to, changing supply and demand relationships, government programs and policies, national and international political and economic events, changes in interest rates, inflation and deflation, and changes in supply and demand relationships. Unlike other investments, derivative contracts often have leverage inherent in their terms. The use of leveraged derivatives can magnify potential for gain or loss and, therefore, amplify the effects of market volatility on the Fund's Share price. The effects of leverage may also cause the Fund to liquidate portfolio positions when it would not be advantageous to do so.

Emerging Markets Securities Risk

Securities of issuers based in countries with developing economies (emerging market countries) may present market, credit, currency, liquidity, legal, political and other risks different from, or greater than, the risks of investing in developed market countries and are generally considered speculative in nature. Emerging market countries are subject to greater market volatility, lower trading volume, political and economic instability, uncertainty regarding the existence of trading markets, rapid inflation, possible repatriation of investment income and capital, currency convertibility issues, less uniform accounting standards and more governmental limitations on foreign investment than more developed markets. Laws regarding foreign investment in emerging market securities, securities regulation, title to securities, and shareholder rights may change quickly and unpredictably. In addition, the enforcement of systems of taxation at federal, regional and local levels in emerging market countries may be inconsistent and subject to sudden change.

Exchange Traded Products Risk

Unlike an investment in a mutual fund, the value of the Fund's investment in other exchange-traded funds or exchange-traded investment products ("ETPs") is based on its market price (rather than NAV) and the Fund could lose money due to premiums/discounts of the ETP (which could cause the Fund to buy shares at market prices that are higher than their value or sell shares at market prices that are lower than their value); the failure of an active trading market to develop; or exchange trading halts or delistings. An investment in the Fund will entail more costs and expenses than a direct investment in any underlying ETP. As the Fund's allocations to underlying ETPs changes, or the expense ratio of underlying ETPs change, the operating expenses borne by the Fund from such investments may increase or decrease.

Focused Investment Risk

To the extent that the Fund invests a large percentage of its assets in a single asset class or the securities of issuers within the same country, group of countries, region, industry, group of industries or sector, an adverse economic, market, political or regulatory development may affect the value of the Fund's investments more than if the Fund were more broadly diversified. Different asset classes, countries, groups of countries, regions, industries, groups of industries or sectors tend to go through cycles of outperformance and underperformance in comparison to each other and to the general financial markets.

Foreign Currency Forward Contracts Risk

When trading in foreign currency forward contracts, the Fund will contract with a foreign or domestic bank, or a foreign or domestic securities dealer, to make or take future delivery of a specified amount of a particular currency. There are no limitations on daily price moves in such forward contracts, and banks and dealers are not required to continue to make markets in such contracts. Governmental imposition of credit controls might limit any such forward contract trading. Foreign currency forward contracts involve certain risks, including the risk of failure of the counterparty to perform its obligations under the contract and the risk that the use of forward contracts may not serve as a complete hedge because of an imperfect correlation between movements in the prices of the contracts and the prices of the currencies hedged.

Foreign Securities Risk

Investments in the securities of non-U.S. issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Some countries and regions have experienced security concerns, war or threats of war and aggression, terrorism, economic uncertainty, natural and environmental disasters and/or systemic market dislocations that have led, and in the future may lead, to increased short-term market volatility and may have adverse long-term effects on the U.S. and world economies and markets generally. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. issuers, and therefore not all material information will be available. Securities exchanges

or foreign governments may adopt rules or regulations that may negatively impact the Fund's ability to invest in foreign securities or may prevent the Fund from repatriating its investments. Less developed securities markets are more likely to experience problems with the clearing and settling of trades, as well as the holding of securities by local banks, agents and depositories. The less developed a country's securities market is, the greater the likelihood of clearing, custody and trade settlement problems.

Foreign Securities Valuation Risk

The Fund's value may be impacted by events that cause the fair value of foreign securities to materially change between the close of the local exchange on which they trade and the time at which the Fund prices its Shares. Additionally, because foreign exchanges on which securities held by the Fund may be open on days when the Fund does not price its Shares, the potential exists for the value of the securities in the Fund's portfolio to change on days when shareholders will not be able to purchase or sell the Fund's Shares.

High Yield Securities Risk

High yield securities, or "junk" bonds, generally offer a higher current yield than the yield available from higher grade issues, but are subject to greater market fluctuations, are less liquid and provide a greater risk of loss than investment grade securities, and therefore are considered to be highly speculative. In general, high yield securities may have a greater risk of default than other types of securities and could cause income and principal losses for the Fund.

Income Risk

The Fund's income may decline when interest rates fall or if there are defaults in its portfolio. This decline can occur because the Fund may subsequently invest in lower-yielding securities when securities in its portfolio mature or the Fund otherwise needs to purchase additional securities.

Interest Rate Risk

An increase in interest rates may cause the value of securities held by the Fund to decline. Fixed income securities with longer durations tend to be more sensitive to changes in interest rates, making them more volatile than securities with shorter durations or floating or adjustable interest rates. The negative impact on the Fund from potential interest rate increases could be swift and significant, including falling market values, increased redemptions and reduced liquidity. The Fund may be subject to a greater risk of rising interest rates during periods of low interest rates.

When interest rates rise, certain obligations will be paid off by the issuer (or other obligated party) more slowly than anticipated, causing the value of these securities to fall. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value. The value of securities with longer maturities generally changes more in response to changes in interest rates than does the value of securities with shorter maturities. During periods of falling interest rates, an issuer of a callable security held by the Fund may "call" or repay the security before its stated maturity, which may result in the Fund having to reinvest the proceeds in securities with lower yields, resulting in a decline in the Fund's income, or in securities with greater risks or with other less favorable features.

Issuer Risk

The performance of the Fund depends on the performance of individual securities to which the Fund has exposure. Changes to the financial condition or credit rating of an issuer of those securities may cause the value of the securities to decline.

Liquidity Risk

Liquidity risk exists when particular investments are difficult to purchase or sell. Certain investments may be subject to restrictions on resale, trade over-the-counter or in limited volume, or lack an active trading market. Accordingly, the Fund may not be able to sell or close out of such investments at favorable times or prices (or at all), or at the prices approximating those at which the Fund currently values them. Illiquid securities may trade at a discount from comparable, more liquid investments and may be subject to wide fluctuations in market value. Holding illiquid securities may also cause the bid-ask spread of the Fund's Shares to widen.

Market Risk

Market risks include political, regulatory, market and economic developments, including developments that impact specific economic sectors, industries or segments of the market, which may affect the Fund's value. Turbulence in financial markets, tariffs and other protectionist measures, political developments and uncertainty, central bank policy, and reduced liquidity in equity, credit and fixed income markets may negatively affect many issuers worldwide, which could have an adverse effect on the Fund. During a general

downturn in the securities markets, multiple asset classes may be negatively affected. Geopolitical and other events, including war, terrorism, economic uncertainty, trade disputes, public health crises and related geopolitical events have led, and in the future may lead, to disruptions in the U.S. and world economies and markets, which may increase financial market volatility and have significant adverse direct or indirect effects on the Fund and its investments. Market disruptions could cause the Fund to lose money, experience significant redemptions, and encounter operational difficulties. Although multiple asset classes may be affected by a market disruption, the duration and effects may not be the same for all types of assets.

Municipal Bond Risk

Issuers, including governmental issuers, may be unable to pay their obligations as they come due. The values of municipal bonds that depend on a specific revenue source to fund their payment obligations may fluctuate as a result of actual or anticipated changes in the cash flows generated by the revenue source or changes in the priority of the municipal obligation to receive the cash flows generated by the revenue source. The values of municipal bonds held by the Fund may be adversely affected by local political and economic conditions and developments. Adverse conditions in an industry significant to a local economy could have a correspondingly adverse effect on the financial condition of local issuers. This risk would be heightened to the extent that the Fund invests a substantial portion of its assets in municipal bonds issued pursuant to similar projects or whose interest is paid solely from revenues of similar projects. In addition, income from municipal bonds held by the Fund could be declared taxable because of, among other things, unfavorable changes in tax laws, adverse interpretations by the Internal Revenue Service or state tax authorities, or noncompliant conduct of an issuer or other obligated party. Loss of tax-exempt status may cause interest received and distributed to shareholders by the Fund to be taxable and may result in a significant decline in the values of such municipal securities. There are various different types of municipal bonds, each with its own unique risk profile. Some of these risks include:

- *General Obligation Bonds Risk* — timely payments depend on the issuer's credit quality, ability to raise tax revenues and ability to maintain an adequate tax base;
- *Revenue Bonds (including Industrial Development Bonds) Risk* — timely payments depend on the money earned by the particular facility or class of facilities, or the amount of revenues derived from another source, and may be negatively impacted by the general credit of the user of the facility;
- *Private Activity Bonds Risk* — municipalities and other public authorities issue private activity bonds to finance development of industrial facilities for use by a private enterprise, which is solely responsible for paying the principal and interest on the bonds, and payment under these bonds depends on the private enterprise's ability to do so;
- *Moral Obligation Bonds Risk* — moral obligation bonds are generally issued by special purpose public authorities of a state or municipality. If the issuer is unable to meet its obligations, repayment of these bonds becomes a moral commitment, but not a legal obligation, of the state or municipality;
- *Municipal Notes Risk* — municipal notes are shorter-term municipal debt obligations that pay interest that is, in the opinion of bond counsel for the issuer at the time of issuance, generally excludable from gross income for federal income tax purposes (except that the interest may be includable in taxable income for purposes of the federal alternative minimum tax) and that have a maturity that is generally one year or less. If there is a shortfall in the anticipated proceeds, the notes may not be fully repaid and the Fund may lose money; and
- *Municipal Lease Obligations Risk* — in a municipal lease obligation, the issuer agrees to make payments when due on the lease obligation. Although the issuer does not pledge its unlimited taxing power for payment of the lease obligation, the lease obligation is secured by the leased property.

Municipal Bond Market Liquidity Risk

Inventories of municipal bonds held by brokers and dealers may decrease, lessening their ability to make a market in these securities. Any reduction in market-making capacity has the potential to decrease the Fund's ability to buy or sell municipal bonds and increase price volatility and trading costs, particularly during periods of economic or market stress. As a result, the Fund may be forced to accept a lower price to sell a municipal bond, to sell other securities to raise cash, or to give up an investment opportunity, any of which could have a negative effect on performance.

Operational Risk

The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other

third-parties, failed or inadequate processes and technology or systems failures. The Fund and Advisor seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address significant operational risks.

Portfolio Management Risk

The Fund is subject to portfolio management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result or, while it may be the desired result, may underperform other types of investment strategies. The Subadvisor may give consideration to certain ESG criteria when evaluating an investment opportunity. The application of ESG criteria may result in the Fund (i) having exposure to certain securities or industry sectors that are significantly different than the composition of the Fund's benchmark; and (ii) performing differently than other funds and strategies in its peer group that do not take into account ESG criteria or the Fund's benchmark. There can be no guarantee that the Fund will meet its investment objective(s).

Portfolio Turnover Risk

The Fund's strategy may frequently involve buying and selling portfolio securities to rebalance the Fund's investment exposures. High portfolio turnover may result in the Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders. Portfolio turnover risk may cause a Fund's performance to be less than expected.

Preferred Securities Risk

Preferred securities combine some of the characteristics of both common stocks and bonds. Preferred securities are typically subordinated to bonds and other debt securities in a company's capital structure in terms of priority to corporate income, subjecting them to greater credit risk than those debt securities. Generally, holders of preferred securities have no voting rights with respect to the issuing company unless preferred dividends have been in arrears for a specified number of periods, at which time the preferred security holders may obtain limited rights. In certain circumstances, an issuer of preferred securities may defer payment on the securities and, in some cases, redeem the securities prior to a specified date. Preferred securities may also be substantially less liquid than other securities, including common stock.

Private Placement and Restricted Securities Risk

The Fund may invest in privately issued securities, including those which may be resold only in accordance with Rule 144A under the Securities Act of 1933, as amended. Securities acquired in a private placement generally are subject to strict restrictions on resale, and there may be no market or a limited market for the resale of such securities. Therefore, the Fund may be unable to dispose of such securities when it desires to do so or at the most favorable price. This potential lack of liquidity also may make it more difficult to accurately value these securities.

Secondary Market Trading Risk

Although the Fund's Shares are listed for trading on one or more securities exchanges, there can be no assurance that an active trading market for such Shares will develop or be maintained by market makers or Authorized Participants. The trading of Shares on securities exchanges is subject to the risk of irregular trading activity. Securities exchanges have requirements that must be met in order for Shares to be listed. There can be no assurance that the requirements of an exchange necessary to maintain the listing of Shares will continue to be met. This risk is particularly acute for funds that fail to attract a large number of shareholders. Pursuant to an exchange's "circuit breaker" rules, trading in the Fund's Shares may be halted due to extraordinary market volatility. Additionally, market makers are under no obligation to make a market in the Fund's Shares and Authorized Participants are not obligated to submit purchase or redemption orders for creation units. In the event market makers cease making a market in the Fund's Shares or Authorized Participants stop submitting purchase or redemption orders for creation units, the Fund's Shares may trade at a larger premium or discount to its NAV.

Short Sales Risk

Short sales are transactions in which the Fund sells a security it does not own, or uses derivatives, such as futures or swaps, to effect short exposure to a particular reference asset. Such a position subjects the Fund to the risk that instead of declining, the price of the security or reference asset to which the Fund has short exposure will rise. If the price of the security or reference asset increases between the date of the short sale and the date on which the Fund replaces the security or otherwise closes out its short position, the Fund will experience a loss, which is theoretically unlimited since there is a theoretically unlimited potential for the market price of a security or other instrument sold short to increase.

Swap Agreements Risk

Swap agreements may involve greater risks than direct investment in securities as they may be leveraged and are subject to credit risk, counterparty risk, liquidity risk and valuation risk. A swap agreement could result in losses if the underlying reference or asset does not perform as anticipated. In addition, many swaps trade over-the-counter and may be considered illiquid. It may not be possible for the Fund to liquidate a swap position at an advantageous time or price, which may result in significant losses.

Trading Price Risk

Although it is generally expected that the market price of the Fund's Shares will approximate the Fund's NAV, there may be times when the market price and the NAV vary significantly. Shares of the Fund trade on securities exchanges at prices at, above or below the Fund's most recent NAV. The NAV of the Fund is calculated at the end of each business day and fluctuates with changes in the market value of the Fund's holdings. The trading price of the Fund's Shares fluctuates continuously throughout trading hours based on market supply of and demand for Shares and the Fund's NAV, among other reasons. As a result, the trading prices of the Fund's Shares may deviate significantly from NAV during periods of market volatility. The market price of the Fund's Shares during the trading day, like the price of any exchange-traded security, includes a "bid/ask" spread charged by market makers or other participants that trade the Shares. In times of severe market disruption, the bid/ask spread can increase significantly. At those times, Shares are most likely to be traded at a discount to NAV, and the discount is likely to be greatest when the price of Shares is falling fastest, which may be the time that an investor most wants to sell their Shares. The risk of wide bid and ask spreads may be especially pronounced for smaller funds. In addition, increased market volatility may cause wider spreads.

Valuation Risk

When valuing the Fund's portfolio investments, if a market quotation is readily available for a portfolio investment, that investment will generally be valued at the market value. However, unlike publicly traded securities that trade on national securities exchanges, there is no central place or exchange for trading most debt securities and thus readily available market quotations are unavailable. Debt securities generally trade on an "over-the-counter" market. Due to the lack of centralized information and trading, and variations in lot sizes of certain debt securities, the valuation of debt securities may carry more uncertainty and risk than that of publicly traded securities. Debt securities are commonly valued by third-party pricing service providers that utilize a range of market-based inputs and assumptions, including readily available market quotations obtained from broker-dealers making markets in such securities, cash flows and transactions for comparable instruments. However, because the available information is less reliable and more subjective, elements of judgment may play a greater role in valuation of debt securities than for other types of securities. Additionally, pricing service providers generally price debt securities assuming orderly transactions of an institutional "round lot" size, but some trades may occur in smaller, "odd lot" sizes, often at lower prices than institutional round lot trades. Valuing the Fund's investments using fair value pricing provided by pricing service providers will result in prices that may differ from current market valuations and that may not be the prices at which those investments could have been sold during the period in which the particular fair values were used. It is possible that the fair value determined for a portfolio instrument may be materially different from the value that could be realized upon the sale of that instrument.

Variable and Floating Rate Instruments Risk

Variable and floating rate instruments include debt securities issued by corporate and governmental entities, bank loans, mortgage-backed securities and asset-backed securities, preferred equity securities and derivative variable rate securities, such as inverse floaters. Variable and floating rate instruments are structured so that the instrument's coupon rate fluctuates based upon the level of a reference rate. A variable or floating rate instrument's coupon rate resets periodically according to its terms. Consequently, in a rising interest rate environment, variable and floating rate instruments with coupon rates that reset infrequently may lag behind the changes in market interest rates.

Zero Coupon Securities Risk

Zero coupon securities do not pay interest on a current basis. The interest earned on zero coupon securities is, implicitly, automatically compounded and paid out at maturity. Zero coupon securities are subject to substantially greater market price fluctuations during periods of changing prevailing interest rates than are comparable securities that make current distributions of interest.

Performance Information

As of the date of this Prospectus, the Fund has not yet completed a full calendar year of operations and therefore does not report its performance information. The Fund's performance current to the most recent month-end is available by calling 1-888-474-7725 or by visiting newyorklifeinvestments.com/etf.

Investment Advisor and Subadvisor

IndexIQ Advisors LLC is the investment advisor to the Fund.

MacKay Shields LLC is the investment subadvisor to the Fund.

Portfolio Managers

The professionals of the subadvisor that are jointly and primarily responsible for the day-to-day management of the Fund are:

<u>Name & Title</u>	<u>Length of Service as Fund's Portfolio Manager</u>
Neil Moriarty, III, Senior Managing Director	Since Fund's inception
Michael DePalma, Managing Director	Since May 2023
Sanjit Gill, Director	Since Fund's inception
Tom Musmanno, Managing Director	Since May 2023
Lesya Paisley, Director	Since Fund's inception
Edward Silverstein, Senior Managing Director	Since Fund's inception
Scott Sprauer, Senior Managing Director	Since Fund's inception
Valentina Chen, Senior Managing Director	Since August 2023
Philip Fielding, Senior Managing Director	Since August 2023
Matt Jacob, Managing Director	Since August 2023

Ms. Chen and Mr. Fielding are part of MacKay Shields UK LLP, an indirect, wholly-owned subsidiary of the Subadvisor, and provide services to the Fund under an arrangement with the Subadvisor.

Purchase and Sale of Fund Shares

Unlike conventional mutual funds, the Fund issues and redeems Shares on a continuous basis, at NAV, only in large blocks of Shares called "Creation Units." Individual Shares of the Fund may only be purchased and sold on the secondary market through a broker-dealer. Since Shares of the Fund trade on securities exchanges in the secondary market at their market price rather than their NAV, the Fund's Shares may trade at a price greater than (premium) or less than (discount) the Fund's NAV. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares of the Fund (bid) and the lowest price a seller is willing to accept for Shares of the Fund (ask) when buying or selling Shares in the secondary market (the "bid-ask spread"). Recent information, including the Fund's NAV, market price, premiums and discounts, and bid-ask spreads, is available online at newyorklifeinvestments.com/etf.

Tax Information

The Fund's distributions are expected to be taxed as ordinary income, qualified dividend income and/or capital gains, unless you are investing through a tax-deferred arrangement, such as a 401(k) plan or individual retirement account. However, subsequent withdrawals from such a tax-advantaged account may be subject to U.S. federal income tax. You should consult your tax advisor about your specific situation.

Financial Intermediary Compensation

If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Advisor or other related companies may pay the intermediary for marketing activities and presentations, educational training programs, conferences, the development of technology platforms and reporting systems or other services related to the sale or promotion of the Fund. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

Summary Information

IQ MacKay Municipal Insured ETF

Investment Objective

The IQ MacKay Municipal Insured ETF (the "Fund") seeks current income exempt from federal income tax.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund ("Shares"). Investors may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example set forth below.

Shareholder Fees (fees paid directly from your investment): None

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment):

Management Fee	0.40%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.09%
Acquired Fund Fees and Expense ^(a)	0.01%
Total Annual Fund Operating Expenses	0.50%
Expense Waiver/Reimbursement ^(b)	0.19%
Total Annual Fund Operating Expenses After Expense Waiver/Reimbursement	0.31%

(a) The Total Annual Fund Operating Expenses may not correlate to the ratio of expenses to average net assets as reported in the "Financial Highlights" section of the Prospectus, which reflects the operating expenses of the Fund and does not include Acquired Fund Fees & Expenses. Acquired Fund Fees & Expenses represent the Fund's pro rata share of fees and expenses incurred indirectly as a result of investing in other funds, including ETFs and money market funds.

(b) IndexIQ Advisors LLC (the "Advisor") has contractually agreed to waive or reduce its management fee and/or reimburse expenses of the Fund in an amount that limits "Total Annual Fund Operating Expenses" (exclusive of interest, taxes, brokerage fees and commissions, dividends paid on short sales, acquired fund fees and expenses, and extraordinary expenses) to not more than 0.30% of the average daily net assets of the Fund. The agreement will remain in effect permanently unless terminated by the Board of Trustees of the Fund.

Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain at current levels. The return of 5% and estimated expenses are for illustration purposes only, and should not be considered indicators of expected Fund expenses or performance, which may be greater or less than the estimates. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

<u>1 Year</u>	<u>3 Years</u>	<u>5 Years</u>	<u>10 Years</u>
\$32	\$100	\$174	\$393

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual Fund operating expenses or in the example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rates was 136% of the average value of its portfolio. This rate excludes the value of the portfolio securities received or delivered as a result of in-kind creations or redemptions of the Shares.

Principal Investment Strategies

The Fund, under normal circumstances, invests at least 80% of its assets (net assets plus borrowings for investment purposes) in: (i) debt securities whose interest is, in the opinion of bond counsel for the issuer at the time of issuance, exempt from federal income tax ("Municipal Bonds"); and (ii) debt securities covered by an insurance policy guaranteeing the payment of principal and interest. The Fund typically invests at least 80% of its net assets in Municipal Bonds that are rated investment grade by at least one independent rating agency (i.e., within the highest four quality ratings by Moody's Investors Service, Inc., Standard & Poor's Ratings Services

or Fitch Ratings, Inc.). If independent rating agencies assign different ratings to the same security, the Fund will use the higher rating for purposes of determining the security's credit quality. The Fund generally will maintain a dollar-weighted average duration of 3 to 15 years.

Municipal Bonds are issued by or on behalf of the District of Columbia, states, territories, commonwealths and possessions of the United States and their political subdivisions and agencies, authorities and instrumentalities. The Fund may not invest more than 20% of its net assets in tax-exempt securities subject to the federal alternative minimum tax.

Insured Municipal Bonds are covered by insurance policies that guarantee the timely payment of principal and interest. The Fund generally purchases Municipal Bonds that have insurance in place so the Fund does not pay insurance premiums directly. The premium costs, however, are reflected in a lower yield and/or higher price for the insured Municipal Bonds. When beneficial, the Fund may purchase insurance for an uninsured bond directly from a qualified Municipal Bond insurer, in which case the Fund pays the insurance premium directly to the insurance company. It is important to note that insurance does not guarantee the market value of an insured security, or the Fund's share price or distributions, and shares of the Fund are not insured.

The Fund may invest more than 25% of its total assets in Municipal Bonds that are related in such a way that an economic, business or political development or change affecting one such security could also affect the other securities. However, the Fund's investments will be diversified among a minimum of ten different sectors of the Municipal Bond market, such as education, transportation and local general obligation. The Fund's investments will be diversified among at least 15 different states, with no more than 30% of the Fund's securities invested in municipal securities from a single state. Some of the Fund's earnings may be subject to federal tax and most may be subject to state and local taxes.

MacKay Shields LLC's (the "Subadvisor") investment process begins with an assessment of macro factors that may impact the Municipal Bond market, including, tax rates, U.S. Treasury rates, and global economic data, as well as other regulatory, tax, governmental, and technical factors that may impact the Municipal Bond market. The Subadvisor's investment process includes a risk analysis that gives consideration to a variety of security-specific risks, including but not limited to, environmental, social and governance ("ESG") risks that may have a material impact on the performance of a security. In addition to proprietary research, the Subadvisor may use screening tools and, to the extent available, third party data to identify ESG risk factors that may not have been captured through its own research. The Subadvisor's consideration of ESG risk is weighed against other criteria and no sectors or industries are explicitly excluded from the Fund. Following the assessment of these factors, the Subadvisor develops an investment strategy to position the Fund among various sectors of the Municipal Bond market and different states. The Subadvisor then employs a fundamental, "bottom-up" credit research analysis to select individual Municipal Bonds.

The Subadvisor may sell a security if it no longer believes the security will contribute to meeting the investment objective of the Fund. In considering whether to sell a security, the Subadvisor may evaluate, among other things, the condition of the economy and meaningful changes in the issuer's financial condition.

Principal Risks

As with all investments, there are certain risks of investing in the Fund. The Fund's Shares will change in value and you could lose money by investing in the Fund. An investment in the Fund does not represent a complete investment program. An investment in the Fund is not a bank deposit and it is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency, the Advisor or any of its affiliates. You should consider carefully the following risks before investing in the Fund.

Alternative Minimum Tax Risk

Although the interest received from municipal securities is generally exempt from federal income tax, the Fund may invest in municipal securities subject to the federal alternative minimum tax. Accordingly, an investment in the Fund could cause shareholders to be subject to the federal alternative minimum tax.

Authorized Participant Concentration Risk

Only certain large institutions may engage in creation or redemption transactions directly with the Fund (each, an "Authorized Participant"). The Fund has a limited number of institutions that may act as Authorized Participants on an agency basis (i.e., on behalf of other market participants). To the extent that those Authorized Participants exit the business or are unable to proceed with creation and/or redemption orders with the Fund and no other Authorized Participant is able to step forward to engage in creation and redemption transactions with the Fund, Shares may be more likely to trade at a premium or discount to NAV and possibly face trading halts and/or delisting.

Cash Transactions Risk

The Fund currently intends to effect creations and redemptions principally for cash, rather than for in-kind securities. For this reason, the Fund may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds. The Fund may recognize a capital gain on these sales that might not have been incurred if the Fund had made a redemption in-kind. This may decrease the tax efficiency of the Fund compared to ETFs that utilize an in-kind redemption process.

Credit Risk

Credit risk is the risk that the issuer or guarantor of a debt instrument or the counterparty to a derivatives contract, repurchase agreement or loan of portfolio securities will be unable or unwilling to make its timely interest and/or principal payments when due or otherwise honor its obligations. Changes in an issuer's or counterparty's credit rating or the market's perception of an issuer's or counterparty's creditworthiness may also adversely affect the value of the Fund's investment in that issuer. The degree of credit risk depends on an issuer's or counterparty's financial condition and on the terms of an obligation.

Cyber Security Risk

The Fund is susceptible to operational risks through breaches in cyber security. Such events may cause the Fund to lose proprietary information, suffer data corruption or lose operational capacity and could cause the Fund to incur regulatory penalties, reputational damage, additional compliance costs associated with corrective measures and/or financial loss. In addition, cyber security breaches of the securities issuers or the Fund's third-party service providers can also subject the Fund to many of the same risks associated with direct cyber security breaches. Although the Fund has established risk management systems designed to reduce the risks associated with cyber security, there is no guarantee that such efforts will succeed.

Debt Securities Risk

The risks of investing in debt securities include (without limitation): (i) credit risk, e.g., the issuer or guarantor of a debt security may be unable or unwilling (or be perceived as unable or unwilling) to make timely principal and/or interest payments or otherwise honor its obligations; (ii) interest rate risk, e.g., when interest rates go up, the value of a debt security generally goes down, and when interest rates go down, the value of a debt security generally goes up; (iii) liquidity risk and valuation risk, e.g., debt securities generally do not trade on a securities exchange, making them generally less liquid and more difficult to value than common stock; (iv) call risk and income risk, e.g., during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund's income if the proceeds are reinvested at lower interest rates; and (v) extension risk, e.g., if interest rates rise, repayments of debt securities may occur more slowly than anticipated by the market, which may drive the prices of these securities down because their interest rates are lower than the current interest rate and the securities remain outstanding longer. Debt securities most frequently trade in institutional round lot size transactions. If the Fund purchases bonds in amounts less than the institutional round lot size, which are frequently referred to as "odd" lots, the odd lot size positions may have more price volatility than institutional round lot size positions. The Fund uses a third-party pricing service to value bond holdings and the pricing service values bonds assuming orderly transactions of an institutional round lot size.

Focused Investment Risk

To the extent that the Fund invests a large percentage of its assets in a single asset class or the securities of issuers within the same country, group of countries, region, industry, group of industries or sector, an adverse economic, market, political or regulatory development may affect the value of the Fund's investments more than if the Fund were more broadly diversified. Different asset classes, countries, groups of countries, regions, industries, groups of industries or sectors tend to go through cycles of outperformance and underperformance in comparison to each other and to the general financial markets.

Income Risk

The Fund's income may decline when interest rates fall or if there are defaults in its portfolio. This decline can occur because the Fund may subsequently invest in lower-yielding securities when securities in its portfolio mature or the Fund otherwise needs to purchase additional securities.

Interest Rate Risk

An increase in interest rates may cause the value of securities held by the Fund to decline. Fixed income securities with longer durations tend to be more sensitive to changes in interest rates, making them more volatile than securities with shorter durations or floating or adjustable interest rates. The negative impact on the Fund from potential interest rate increases could be swift and significant, including falling market values, increased redemptions and reduced liquidity. The Fund may be subject to a greater risk of rising interest rates

during periods of low interest rates. When interest rates rise, certain obligations will be paid off by the issuer (or other obligated party) more slowly than anticipated, causing the value of these securities to fall. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value. The value of securities with longer maturities generally changes more in response to changes in interest rates than does the value of securities with shorter maturities. During periods of falling interest rates, an issuer of a callable security held by the Fund may “call” or repay the security before its stated maturity, which may result in the Fund having to reinvest the proceeds in securities with lower yields, resulting in a decline in the Fund’s income, or in securities with greater risks or with other less favorable features.

Issuer Risk

The performance of the Fund depends on the performance of individual securities to which the Fund has exposure. Changes to the financial condition or credit rating of an issuer of those securities may cause the value of the securities to decline.

Liquidity Risk

Liquidity risk exists when particular investments are difficult to purchase or sell. Certain investments may be subject to restrictions on resale, trade over-the-counter or in limited volume, or lack an active trading market. Accordingly, the Fund may not be able to sell or close out of such investments at favorable times or prices (or at all), or at the prices approximating those at which the Fund currently values them. Illiquid securities may trade at a discount from comparable, more liquid investments and may be subject to wide fluctuations in market value.

Market Risk

Market risks include political, regulatory, market and economic developments, including developments that impact specific economic sectors, industries or segments of the market, which may affect the Fund’s value. Turbulence in financial markets, tariffs and other protectionist measures, political developments and uncertainty, central bank policy, and reduced liquidity in equity, credit and fixed income markets may negatively affect many issuers worldwide, which could have an adverse effect on the Fund. During a general downturn in the securities markets, multiple asset classes may be negatively affected. Geopolitical and other events, including war, terrorism, economic uncertainty, trade disputes, public health crises and related geopolitical events have led, and in the future may lead, to disruptions in the US and world economies and markets, which may increase financial market volatility and have significant adverse direct or indirect effects on a Fund and its investments. Market disruptions could cause the Fund to lose money, experience significant redemptions, and encounter operational difficulties. Although multiple asset classes may be affected by a market disruption, the duration and effects may not be the same for all types of assets.

Money Market/Short-Term Securities Risk

To the extent the Fund holds cash or invests in money market or short-term securities, the Fund may be less likely to achieve its investment objective. In addition, it is possible that the Fund’s investments in these instruments could lose money.

Municipal Bond Risk

Issuers, including governmental issuers, may be unable to pay their obligations as they come due. The values of Municipal Bonds that depend on a specific revenue source to fund their payment obligations may fluctuate as a result of actual or anticipated changes in the cash flows generated by the revenue source or changes in the priority of the municipal obligation to receive the cash flows generated by the revenue source. The values of Municipal Bonds held by the Fund may be adversely affected by local political and economic conditions and developments. Adverse conditions in an industry significant to a local economy could have a correspondingly adverse effect on the financial condition of local issuers. This risk would be heightened to the extent that the Fund invests a substantial portion of its assets in Municipal Bonds issued pursuant to similar projects or whose interest is paid solely from revenues of similar projects. In addition, income from Municipal Bonds held by the Fund could be declared taxable because of, among other things, unfavorable changes in tax laws, adverse interpretations by the Internal Revenue Service or state tax authorities, or noncompliant conduct of an issuer or other obligated party. Loss of tax-exempt status may cause interest received and distributed to shareholders by the Fund to be taxable and may result in a significant decline in the values of such municipal securities. There are various different types of Municipal Bonds, each with its own unique risk profile. Some of these risks include:

- *General Obligation Bonds Risk* — timely payments depend on the issuer’s credit quality, ability to raise tax revenues and ability to maintain an adequate tax base;

- *Revenue Bonds (including Industrial Development Bonds) Risk* — timely payments depend on the money earned by the particular facility or class of facilities, or the amount of revenues derived from another source, and may be negatively impacted by the general credit of the user of the facility;
- *Private Activity Bonds Risk* — municipalities and other public authorities issue private activity bonds to finance development of industrial facilities for use by a private enterprise, which is solely responsible for paying the principal and interest on the bonds, and payment under these bonds depends on the private enterprise's ability to do so;
- *Moral Obligation Bonds Risk* — moral obligation bonds are generally issued by special purpose public authorities of a state or municipality. If the issuer is unable to meet its obligations, repayment of these bonds becomes a moral commitment, but not a legal obligation, of the state or municipality;
- *Municipal Notes Risk* — municipal notes are shorter-term municipal debt obligations that pay interest that is, in the opinion of bond counsel for the issuer at the time of issuance, generally excludable from gross income for federal income tax purposes (except that the interest may be includable in taxable income for purposes of the federal alternative minimum tax) and that have a maturity that is generally one year or less. If there is a shortfall in the anticipated proceeds, the notes may not be fully repaid and the Fund may lose money; and
- *Municipal Lease Obligations Risk* — in a municipal lease obligation, the issuer agrees to make payments when due on the lease obligation. Although the issuer does not pledge its unlimited taxing power for payment of the lease obligation, the lease obligation is secured by the leased property.

Municipal Bond Market Liquidity Risk

Inventories of Municipal Bonds held by brokers and dealers may decrease, lessening their ability to make a market in these securities. Any reduction in market-making capacity has the potential to decrease the Fund's ability to buy or sell Municipal Bonds and increase price volatility and trading costs, particularly during periods of economic or market stress. As a result, the Fund may be forced to accept a lower price to sell a Municipal Bond, to sell other securities to raise cash, or to give up an investment opportunity, any of which could have a negative effect on performance.

Municipal Insurance Risk

The Fund's investments may include investments in insured Municipal Bonds. Municipal security insurance does not guarantee the value either of individual municipal securities or of Shares of the Fund. In addition, a municipal security insurance policy generally will not cover: (i) repayment of a municipal security before maturity (redemption), (ii) prepayment or payment of an acceleration premium (except for a mandatory sinking fund redemption) or any other provision of a bond indenture that advances the maturity of the bond or (iii) non-payment of principal or interest caused by negligence or bankruptcy of the paying agent. A mandatory sinking fund redemption may be a provision of a municipal security issue whereby part of the municipal security issue may be retired before maturity. Market conditions or changes to ratings criteria could adversely impact the ratings of Municipal Bond insurance companies. Downgrades and withdrawal of ratings from Municipal Bond insurers have substantially limited the availability of insurance sought by Municipal Bond issuers, thereby reducing the supply of insured Municipal Bonds that meet the Fund's investment guidelines or the ability of the Fund to purchase insurance on Municipal Bonds held by the Fund. A rating downgrade of a Municipal Bond insurer could negatively impact the market value of insured Municipal Bonds held by the Fund. If the insurer of a defaulted Municipal Bond were to become unable or unwilling to pay the principal or interest on the defaulted Municipal Bond, the Fund would incur losses.

Operational Risk

The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund and Advisor seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address significant operational risks.

Portfolio Management Risk

The Fund is subject to portfolio management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result or, while it may be the desired result, may underperform other types of investment strategies. The application of ESG criteria may result in the Fund (i) having exposure to certain

securities or industry sectors that are significantly different than the composition of the Fund's benchmark; and performing differently than other funds and strategies in its peer group that do not take into account ESG criteria or the Fund's benchmark. There can be no guarantee that the Fund will meet its investment objective(s).

Portfolio Turnover Risk

The Fund's strategy may frequently involve buying and selling portfolio securities to rebalance the Fund's investment exposures. High portfolio turnover may result in the Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders. Portfolio turnover risk may cause a Fund's performance to be less than expected.

Secondary Market Trading Risk

Although the Fund's Shares are listed for trading on one or more securities exchanges, there can be no assurance that an active trading market for such Shares will develop or be maintained by market makers or Authorized Participants. The trading of Shares on securities exchanges is subject to the risk of irregular trading activity. Securities exchanges have requirements that must be met in order for Shares to be listed. There can be no assurance that the requirements of an exchange necessary to maintain the listing of Shares will continue to be met. This risk is particularly acute for funds that fail to attract a large number of shareholders. Pursuant to an exchange's "circuit breaker" rules, trading in the Fund's Shares may be halted due to extraordinary market volatility. Additionally, market makers are under no obligation to make a market in the Fund's Shares and Authorized Participants are not obligated to submit purchase or redemption orders for creation units. In the event market makers cease making a market in the Fund's Shares or Authorized Participants stop submitting purchase or redemption orders for creation units, the Fund's Shares may trade at a larger premium or discount to its NAV.

Trading Price Risk

Although it is generally expected that the market price of the Fund's Shares will approximate the Fund's NAV, there may be times when the market price and the NAV vary significantly. Shares of the Fund trade on securities exchanges at prices at, above or below the Fund's most recent NAV. The NAV of the Fund is calculated at the end of each business day and fluctuates with changes in the market value of the Fund's holdings. The trading price of the Fund's Shares fluctuates continuously throughout trading hours based on market supply of and demand for Shares and the Fund's NAV, among other reasons. As a result, the trading prices of the Fund's Shares may deviate significantly from NAV during periods of market volatility. The market price of the Fund's Shares during the trading day, like the price of any exchange-traded security, includes a "bid/ask" spread charged by market makers or other participants that trade the Shares. In times of severe market disruption, the bid/ask spread can increase significantly. At those times, Shares are most likely to be traded at a discount to NAV, and the discount is likely to be greatest when the price of Shares is falling fastest, which may be the time that an investor most wants to sell their Shares. The risk of wide bid and ask spreads may be especially pronounced for smaller funds. In addition, increased market volatility may cause wider spreads.

Valuation Risk

When valuing the Fund's portfolio investments, if a market quotation is readily available for a portfolio investment, that investment will generally be valued at the market value. However, unlike publicly traded securities that trade on national securities exchanges, there is no central place or exchange for trading most debt securities and thus readily available market quotations are unavailable. Debt securities generally trade on an "over-the-counter" market. Due to the lack of centralized information and trading, and variations in lot sizes of certain debt securities, the valuation of debt securities may carry more uncertainty and risk than that of publicly traded securities. Debt securities are commonly valued by third-party pricing service providers that utilize a range of market-based inputs and assumptions, including readily available market quotations obtained from broker-dealers making markets in such securities, cash flows and transactions for comparable instruments. However, because the available information is less reliable and more subjective, elements of judgment may play a greater role in valuation of debt securities than for other types of securities. Additionally, pricing service providers generally price debt securities assuming orderly transactions of an institutional "round lot" size, but some trades may occur in smaller, "odd lot" sizes, often at lower prices than institutional round lot trades. Valuing the Fund's investments using fair value pricing provided by pricing service providers will result in prices that may differ from current market valuations and that may not be the prices at which those investments could have been sold during the period in which the particular fair values were used. It is possible that the fair value determined for a portfolio instrument may be materially different from the value that could be realized upon the sale of that instrument.

Performance Information

The following bar chart and table provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compare with its benchmark over time. The table that follows the bar chart shows the Fund's average annual total return, both before and after taxes. The Bloomberg Municipal All Insured Bond Index is a total return performance benchmark for municipal bonds that are backed by insurers with Aaa/AAA ratings and have maturities of at least one year.

All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future. Performance reflects fee waivers and/or expense reimbursement in effect, if such waivers or reimbursements were not in place, the Fund's performance would be reduced. Fund performance current to the most recent month-end is available by calling 1-888-474-7725 or by visiting newyorklifeinvestments.com/eff.

The Fund's year-to-date total returns as of June 30, 2023 was 3.27%.

Best and Worst Quarter Returns (for the period reflected in the bar chart above)

	Return	Quarter/Year
Highest Return	4.79%	4Q/2022
Lowest Return	-6.66%	1Q/2022

Average Annual Total Returns as of December 31, 2022

	1 Year	5 Years	Since Inception ⁽¹⁾
Returns before taxes	-11.10%	1.31%	1.55%
Returns after taxes on distributions ⁽²⁾	-11.10%	1.27%	1.51%
Returns after taxes on distributions and sales of Fund shares ⁽²⁾	-5.53%	1.57%	1.76%
Bloomberg Municipal All Insured Bond Index (reflects no deduction for fees, expenses or taxes)	-10.42%	1.67%	1.62%

(1) The Fund commenced operations on October 18, 2017.

(2) After-tax returns are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on your tax situation and may differ from those shown and are not relevant if you hold your Shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts. In some cases the return after taxes may exceed the return before taxes due to an assumed tax benefit from any losses on a sale of Fund Shares at the end of the measurement period.

Investment Advisor and Subadvisor

IndexIQ Advisors LLC is the investment advisor to the Fund.

MacKay Shields LLC is the investment subadvisor to the Fund.

Portfolio Managers

The professionals of the subadvisor that are jointly and primarily responsible for the day-to-day management of the Fund are:

Name & Title	Length of Service as Fund's Portfolio Manager
Michael Denlinger, Managing Director	Since 2020
David Dowden, Managing Director	Since Fund's inception
John Lawlor, Managing Director	Since Fund's inception
Frances Lewis, Senior Managing Director	Since 2018
Scott Sprauer, Senior Managing Director	Since Fund's inception

Purchase and Sale of Fund Shares

Unlike conventional mutual funds, the Fund issues and redeems Shares on a continuous basis, at NAV, only in large blocks of Shares called "Creation Units." Individual Shares of the Fund may only be purchased and sold on the secondary market through a broker-dealer. Since Shares of the Fund trade on securities exchanges in the secondary market at their market price rather than their NAV, the Fund's Shares may trade at a price greater than (premium) or less than (discount) the Fund's NAV. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares of the Fund (bid) and the lowest price a seller is willing to accept for Shares of the Fund (ask) when buying or selling Shares in the secondary market (the "bid-ask spread"). Recent information, including the Fund's NAV, market price, premiums and discounts, and bid-ask spreads, is available online at newyorklifeinvestments.com/etf.

Tax Information

The Fund intends to distribute tax-exempt income. The Fund intends to meet certain U.S. federal tax requirements so that distributions of the tax-exempt interest it earns may be treated as exempt-interest dividends. A portion of the exempt-interest dividends may be subject to the alternative minimum tax on individuals and may have other tax consequences to certain shareholders. However, a portion of the Fund's distributions may be subject to U.S. federal income tax, and may be taxed as ordinary income, qualified dividend income and/or capital gains, unless you are investing through a tax-deferred arrangement, such as a 401(k) plan or individual retirement account, in which case you may be subject to U.S. federal income tax upon withdrawal from such a tax-advantaged account. You should consult your tax advisor about your specific situation.

Financial Intermediary Compensation

If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Advisor or other related companies may pay the intermediary for marketing activities and presentations, educational training programs, conferences, the development of technology platforms and reporting systems or other services related to the sale or promotion of the Fund. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

Summary Information

IQ MacKay Municipal Intermediate ETF

Investment Objective

The IQ MacKay Municipal Intermediate ETF (the "Fund") seeks current income exempt from federal income tax.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund ("Shares"). Investors may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example set forth below.

Shareholder Fees (fees paid directly from your investment): None

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment):

Management Fee	0.40%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.10%
Acquired Fund Fees and Expense ^(a)	<u>0.01%</u>
Total Annual Fund Operating Expenses	0.51%
Expense Waiver/Reimbursement ^(b)	<u>0.20%</u>
Total Annual Fund Operating Expenses After Expense Waiver/Reimbursement	<u>0.31%</u>

(a) The Total Annual Fund Operating Expenses may not correlate to the ratio of expenses to average net assets as reported in the "Financial Highlights" section of the Prospectus, which reflects the operating expenses of the Fund and does not include Acquired Fund Fees & Expenses. Acquired Fund Fees & Expenses represent the Fund's pro rata share of fees and expenses incurred indirectly as a result of investing in other funds, including ETFs and money market funds.

(b) IndexIQ Advisors LLC (the "Advisor") has contractually agreed to waive or reduce its management fee and/or reimburse expenses of the Fund in an amount that limits "Total Annual Fund Operating Expenses" (exclusive of interest, taxes, brokerage fees and commissions, dividends paid on short sales, acquired fund fees and expenses, and extraordinary expenses) to not more than 0.30% of the average daily net assets of the Fund. The agreement will remain in effect permanently unless terminated by the Board of Trustees of the Fund.

Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain at current levels. The return of 5% and estimated expenses are for illustration purposes only, and should not be considered indicators of expected Fund expenses or performance, which may be greater or less than the estimates. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

<u>1 Year</u>	<u>3 Years</u>	<u>5 Years</u>	<u>10 Years</u>
\$32	\$100	\$174	\$393

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual Fund operating expenses or in the example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rates was 64% of the average value of its portfolio. This rate excludes the value of the portfolio securities received or delivered as a result of in-kind creations or redemptions of the Shares.

Principal Investment Strategies

The Fund, under normal circumstances, invests at least 80% of its assets (net assets plus borrowings for investment purposes) in debt securities whose interest is, in the opinion of bond counsel for the issuer at the time of issuance, exempt from federal income tax ("Municipal Bonds"). The Fund typically invests at least 80% of its net assets in Municipal Bonds that are rated investment grade by at least one nationally recognized statistical rating organization ("NRSRO"), or, if unrated, judged to be of comparable quality by the Subadvisor. If independent rating agencies assign different ratings to the same security, the Fund will use the higher rating for purposes of determining the security's credit quality. The Fund generally will maintain a dollar-weighted average duration of 3 to 10 years.

Municipal Bonds are issued by or on behalf of the District of Columbia, states, territories, commonwealths and possessions of the United States and their political subdivisions and agencies, authorities and instrumentalities. The Fund does not intend to invest in Municipal Bonds whose interest is subject to the federal alternative minimum tax.

The Fund may invest more than 25% of its total assets in Municipal Bonds that are related in such a way that an economic, business or political development or change affecting one such security could also affect the other securities. However, the Fund's investments will be diversified among a minimum of ten different sectors of the Municipal Bond market, such as education, transportation and local general obligation. The Fund's investments will be diversified among at least 15 different states, with no more than 30% of the Fund's securities invested in municipal securities from a single state. Some of the Fund's earnings may be subject to federal tax and most may be subject to state and local taxes.

MacKay Shields LLC's (the "Subadvisor") investment process begins with an assessment of macro factors that may impact the Municipal Bond market, including tax rates, U.S. Treasury rates, and global economic data, as well as other regulatory, tax, governmental, and technical factors that may impact the Municipal Bond market. The Subadvisor's investment process includes a risk analysis that gives consideration to a variety of security-specific risks, including but not limited to, environmental, social and governance ("ESG") risks that may have a material impact on the performance of a security. In addition to proprietary research, the Subadvisor may use screening tools and, to the extent available, third party data to identify ESG risk factors that may not have been captured through its own research. The Subadvisor's consideration of ESG risk is weighed against other criteria and no sectors or industries are explicitly excluded from the Fund. Following the assessment of these factors, the Subadvisor develops an investment strategy to position the Fund among various sectors of the Municipal Bond market and different states. The Subadvisor then employs a fundamental, "bottom-up" credit research analysis to select individual Municipal Bonds.

The Subadvisor may sell a security if it no longer believes the security will contribute to meeting the investment objective of the Fund. In considering whether to sell a security, the Subadvisor may evaluate, among other things, the condition of the economy and meaningful changes in the issuer's financial condition.

Principal Risks

As with all investments, there are certain risks of investing in the Fund. The Fund's Shares will change in value and you could lose money by investing in the Fund. An investment in the Fund does not represent a complete investment program. An investment in the Fund is not a bank deposit and it is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency, the Advisor or any of its affiliates. You should consider carefully the following risks before investing in the Fund.

Alternative Minimum Tax Risk

Although the interest received from municipal securities is generally exempt from federal income tax, the Fund may invest in municipal securities subject to the federal alternative minimum tax. Accordingly, an investment in the Fund could cause shareholders to be subject to the federal alternative minimum tax.

Authorized Participant Concentration Risk

Only certain large institutions may engage in creation or redemption transactions directly with the Fund (each, an "Authorized Participant"). The Fund has a limited number of institutions that may act as Authorized Participants on an agency basis (i.e., on behalf of other market participants). To the extent that those Authorized Participants exit the business or are unable to proceed with creation and/or redemption orders with the Fund and no other Authorized Participant is able to step forward to engage in creation and redemption transactions with the Fund, Shares may be more likely to trade at a premium or discount to NAV and possibly face trading halts and/or delisting.

Cash Transactions Risk

The Fund currently intends to effect creations and redemptions principally for cash, rather than for in-kind securities. For this reason, the Fund may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds. The Fund may recognize a capital gain on these sales that might not have been incurred if the Fund had made a redemption in-kind. This may decrease the tax efficiency of the Fund compared to ETFs that utilize an in-kind redemption process.

Credit Risk

Credit risk is the risk that the issuer or guarantor of a debt instrument or the counterparty to a derivatives contract, repurchase agreement or loan of portfolio securities will be unable or unwilling to make its timely interest and/or principal payments when due or otherwise honor its obligations. Changes in an issuer's or

counterparty's credit rating or the market's perception of an issuer's or counterparty's creditworthiness may also adversely affect the value of the Fund's investment in that issuer. The degree of credit risk depends on an issuer's or counterparty's financial condition and on the terms of an obligation.

Cyber Security Risk

The Fund is susceptible to operational risks through breaches in cyber security. Such events may cause the Fund to lose proprietary information, suffer data corruption or lose operational capacity and could cause the Fund to incur regulatory penalties, reputational damage, additional compliance costs associated with corrective measures and/or financial loss. In addition, cyber security breaches of the securities issuers or the Fund's third-party service providers can also subject the Fund to many of the same risks associated with direct cyber security breaches. Although the Fund has established risk management systems designed to reduce the risks associated with cyber security, there is no guarantee that such efforts will succeed.

Debt Securities Risk

The risks of investing in debt securities include (without limitation): (i) credit risk, e.g., the issuer or guarantor of a debt security may be unable or unwilling (or be perceived as unable or unwilling) to make timely principal and/or interest payments or otherwise honor its obligations; (ii) interest rate risk, e.g., when interest rates go up, the value of a debt security generally goes down, and when interest rates go down, the value of a debt security generally goes up; (iii) liquidity risk and valuation risk, e.g., debt securities generally do not trade on a securities exchange, making them generally less liquid and more difficult to value than common stock; (iv) call risk and income risk, e.g., during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund's income if the proceeds are reinvested at lower interest rates; and (v) extension risk, e.g., if interest rates rise, repayments of debt securities may occur more slowly than anticipated by the market, which may drive the prices of these securities down because their interest rates are lower than the current interest rate and the securities remain outstanding longer. Debt securities most frequently trade in institutional round lot size transactions. If the Fund purchases bonds in amounts less than the institutional round lot size, which are frequently referred to as "odd" lots, the odd lot size positions may have more price volatility than institutional round lot size positions. The Fund uses a third-party pricing service to value bond holdings and the pricing service values bonds assuming orderly transactions of an institutional round lot size.

Focused Investment Risk

To the extent that the Fund invests a large percentage of its assets in a single asset class or the securities of issuers within the same country, group of countries, region, industry, group of industries or sector, an adverse economic, market, political or regulatory development may affect the value of the Fund's investments more than if the Fund were more broadly diversified. Different asset classes, countries, groups of countries, regions, industries, groups of industries or sectors tend to go through cycles of outperformance and underperformance in comparison to each other and to the general financial markets.

Income Risk

The Fund's income may decline when interest rates fall or if there are defaults in its portfolio. This decline can occur because the Fund may subsequently invest in lower-yielding securities when securities in its portfolio mature or the Fund otherwise needs to purchase additional securities.

Interest Rate Risk

An increase in interest rates may cause the value of securities held by the Fund to decline. Fixed income securities with longer durations tend to be more sensitive to changes in interest rates, making them more volatile than securities with shorter durations or floating or adjustable interest rates. The negative impact on the Fund from potential interest rate increases could be swift and significant, including falling market values, increased redemptions and reduced liquidity. The Fund may be subject to a greater risk of rising interest rates during periods of low interest rates.

When interest rates rise, certain obligations will be paid off by the issuer (or other obligated party) more slowly than anticipated, causing the value of these securities to fall. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value. The value of securities with longer maturities generally changes more in response to changes in interest rates than does the value of securities with shorter maturities. During periods of falling interest rates, an issuer of a callable security held by the Fund may "call" or repay the security before its stated maturity, which may result in the Fund having to reinvest the proceeds in securities with lower yields, resulting in a decline in the Fund's income, or in securities with greater risks or with other less favorable features.

Issuer Risk

The performance of the Fund depends on the performance of individual securities to which the Fund has exposure. Changes to the financial condition or credit rating of an issuer of those securities may cause the value of the securities to decline.

Liquidity Risk

Liquidity risk exists when particular investments are difficult to purchase or sell. Certain investments may be subject to restrictions on resale, trade over-the-counter or in limited volume, or lack an active trading market. Accordingly, the Fund may not be able to sell or close out of such investments at favorable times or prices (or at all), or at the prices approximating those at which the Fund currently values them. Illiquid securities may trade at a discount from comparable, more liquid investments and may be subject to wide fluctuations in market value.

Market Risk

Market risks include political, regulatory, market and economic developments, including developments that impact specific economic sectors, industries or segments of the market, which may affect the Fund's value. Turbulence in financial markets, tariffs and other protectionist measures, political developments and uncertainty, central bank policy, and reduced liquidity in equity, credit and fixed income markets may negatively affect many issuers worldwide, which could have an adverse effect on the Fund. During a general downturn in the securities markets, multiple asset classes may be negatively affected. Geopolitical and other events, including war, terrorism, economic uncertainty, trade disputes, public health crises and related geopolitical events have led, and in the future may lead, to disruptions in the US and world economies and markets, which may increase financial market volatility and have significant adverse direct or indirect effects on a Fund and its investments. Market disruptions could cause the Fund to lose money, experience significant redemptions, and encounter operational difficulties. Although multiple asset classes may be affected by a market disruption, the duration and effects may not be the same for all types of assets.

Money Market/Short-Term Securities Risk

To the extent the Fund holds cash or invests in money market or short-term securities, the Fund may be less likely to achieve its investment objective. In addition, it is possible that the Fund's investments in these instruments could lose money.

Municipal Bond Risk

Issuers, including governmental issuers, may be unable to pay their obligations as they come due. The values of Municipal Bonds that depend on a specific revenue source to fund their payment obligations may fluctuate as a result of actual or anticipated changes in the cash flows generated by the revenue source or changes in the priority of the municipal obligation to receive the cash flows generated by the revenue source. The values of Municipal Bonds held by the Fund may be adversely affected by local political and economic conditions and developments. Adverse conditions in an industry significant to a local economy could have a correspondingly adverse effect on the financial condition of local issuers. This risk would be heightened to the extent that the Fund invests a substantial portion of its assets in Municipal Bonds issued pursuant to similar projects or whose interest is paid solely from revenues of similar projects. In addition, income from Municipal Bonds held by the Fund could be declared taxable because of, among other things, unfavorable changes in tax laws, adverse interpretations by the Internal Revenue Service or state tax authorities, or noncompliant conduct of an issuer or other obligated party. Loss of tax-exempt status may cause interest received and distributed to shareholders by the Fund to be taxable and may result in a significant decline in the values of such municipal securities. There are various different types of Municipal Bonds, each with its own unique risk profile. Some of these risks include:

- *General Obligation Bonds Risk* — timely payments depend on the issuer's credit quality, ability to raise tax revenues and ability to maintain an adequate tax base;
- *Revenue Bonds (including Industrial Development Bonds) Risk* — timely payments depend on the money earned by the particular facility or class of facilities, or the amount of revenues derived from another source, and may be negatively impacted by the general credit of the user of the facility;
- *Private Activity Bonds Risk* — municipalities and other public authorities issue private activity bonds to finance development of industrial facilities for use by a private enterprise, which is solely responsible for paying the principal and interest on the bonds, and payment under these bonds depends on the private enterprise's ability to do so;

- *Moral Obligation Bonds Risk* — moral obligation bonds are generally issued by special purpose public authorities of a state or municipality. If the issuer is unable to meet its obligations, repayment of these bonds becomes a moral commitment, but not a legal obligation, of the state or municipality;
- *Municipal Notes Risk* — municipal notes are shorter-term municipal debt obligations that pay interest that is, in the opinion of bond counsel for the issuer at the time of issuance, generally excludable from gross income for federal income tax purposes (except that the interest may be includable in taxable income for purposes of the federal alternative minimum tax) and that have a maturity that is generally one year or less. If there is a shortfall in the anticipated proceeds, the notes may not be fully repaid and the Fund may lose money; and
- *Municipal Lease Obligations Risk* — in a municipal lease obligation, the issuer agrees to make payments when due on the lease obligation. Although the issuer does not pledge its unlimited taxing power for payment of the lease obligation, the lease obligation is secured by the leased property.

Municipal Bond Market Liquidity Risk

Inventories of Municipal Bonds held by brokers and dealers may decrease, lessening their ability to make a market in these securities. Any reduction in market-making capacity has the potential to decrease the Fund's ability to buy or sell Municipal Bonds and increase price volatility and trading costs, particularly during periods of economic or market stress. As a result, the Fund may be forced to accept a lower price to sell a Municipal Bond, to sell other securities to raise cash, or to give up an investment opportunity, any of which could have a negative effect on performance.

Operational Risk

The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund and Advisor seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address significant operational risks.

Portfolio Management Risk

The Fund is subject to portfolio management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result or, while it may be the desired result, may underperform other types of investment strategies. The application of ESG criteria may result in the Fund (i) having exposure to certain securities or industry sectors that are significantly different than the composition of the Fund's benchmark; and performing differently than other funds and strategies in its peer group that do not take into account ESG criteria or the Fund's benchmark. There can be no guarantee that the Fund will meet its investment objective(s).

Secondary Market Trading Risk

Although the Fund's Shares are listed for trading on one or more securities exchanges, there can be no assurance that an active trading market for such Shares will develop or be maintained by market makers or Authorized Participants. The trading of Shares on securities exchanges is subject to the risk of irregular trading activity. Securities exchanges have requirements that must be met in order for Shares to be listed. There can be no assurance that the requirements of an exchange necessary to maintain the listing of Shares will continue to be met. This risk is particularly acute for funds that fail to attract a large number of shareholders. Pursuant to an exchange's "circuit breaker" rules, trading in the Fund's Shares may be halted due to extraordinary market volatility. Additionally, market makers are under no obligation to make a market in the Fund's Shares and Authorized Participants are not obligated to submit purchase or redemption orders for creation units. In the event market makers cease making a market in the Fund's Shares or Authorized Participants stop submitting purchase or redemption orders for creation units, the Fund's Shares may trade at a larger premium or discount to its NAV.

Trading Price Risk

Although it is generally expected that the market price of the Fund's Shares will approximate the Fund's NAV, there may be times when the market price and the NAV vary significantly. Shares of the Fund trade on securities exchanges at prices at, above or below the Fund's most recent NAV. The NAV of the Fund is calculated at the end of each business day and fluctuates with changes in the market value of the Fund's holdings. The trading price of the Fund's Shares fluctuates continuously throughout trading hours based on market supply of and

demand for Shares and the Fund's NAV, among other reasons. As a result, the trading prices of the Fund's Shares may deviate significantly from NAV during periods of market volatility. The market price of the Fund's Shares during the trading day, like the price of any exchange-traded security, includes a "bid/ask" spread charged by market makers or other participants that trade the Shares. In times of severe market disruption, the bid/ask spread can increase significantly. At those times, Shares are most likely to be traded at a discount to NAV, and the discount is likely to be greatest when the price of Shares is falling fastest, which may be the time that an investor most wants to sell their Shares. The risk of wide bid and ask spreads may be especially pronounced for smaller funds. In addition, increased market volatility may cause wider spreads.

Valuation Risk

When valuing the Fund's portfolio investments, if a market quotation is readily available for a portfolio investment, that investment will generally be valued at the market value. However, unlike publicly traded securities that trade on national securities exchanges, there is no central place or exchange for trading most debt securities and thus readily available market quotations are unavailable. Debt securities generally trade on an "over-the-counter" market. Due to the lack of centralized information and trading, and variations in lot sizes of certain debt securities, the valuation of debt securities may carry more uncertainty and risk than that of publicly traded securities. Debt securities are commonly valued by third-party pricing service providers that utilize a range of market-based inputs and assumptions, including readily available market quotations obtained from broker-dealers making markets in such securities, cash flows and transactions for comparable instruments. However, because the available information is less reliable and more subjective, elements of judgment may play a greater role in valuation of debt securities than for other types of securities. Additionally, pricing service providers generally price debt securities assuming orderly transactions of an institutional "round lot" size, but some trades may occur in smaller, "odd lot" sizes, often at lower prices than institutional round lot trades. Valuing the Fund's investments using fair value pricing provided by pricing service providers will result in prices that may differ from current market valuations and that may not be the prices at which those investments could have been sold during the period in which the particular fair values were used. It is possible that the fair value determined for a portfolio instrument may be materially different from the value that could be realized upon the sale of that instrument.

Performance Information

The following bar chart and table provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compare with its benchmark over time. The table that follows the bar chart shows the Fund's average annual total return, both before and after taxes. The Bloomberg Municipal Bond Index 1-15 Year Blend covers the U.S. dollar-denominate long-term tax-exempt bond market. The index has four main sectors state and local general obligation bonds, revenue bonds, insured bonds and pre-refunded bonds.

All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future. Performance reflects fee waivers and/or expense reimbursement in effect, if such waivers or reimbursements were not in place, the Fund's performance would be reduced. Fund performance current to the most recent month-end is available by calling 1-888-474-7725 or by visiting newyorklifeinvestments.com/etf.

The Fund's year-to-date total returns as of June 30, 2023 was 2.26%.

Best and Worst Quarter Returns (for the period reflected in the bar chart above)

	Return	Quarter/Year
Highest Return	4.07%	4Q/2022
Lowest Return	-5.62%	1Q/2022

Average Annual Total Returns as of December 31, 2022

	1 Year	5 Years	Since Inception ⁽¹⁾
Returns before taxes	-7.45%	1.89%	1.96%
Returns after taxes on distributions ⁽²⁾	-7.45%	1.75%	1.82%
Returns after taxes on distributions and sales of Fund Shares ⁽²⁾	-3.55%	1.95%	2.00%
Bloomberg Municipal Bond Index 1-15 Year Blend (reflects no deduction for fees, expenses or taxes)	-5.95%	1.44%	1.33%

(1) The Fund commenced operations on October 18, 2017.

(2) After-tax returns are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on your tax situation and may differ from those shown and are not relevant if you hold your Shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts. In some cases the return after taxes may exceed the return before taxes due to an assumed tax benefit from any losses on a sale of Fund Shares at the end of the measurement period.

Investment Advisor and Subadvisor

IndexIQ Advisors LLC is the investment advisor to the Fund.

MacKay Shields LLC is the investment subadvisor to the Fund.

Portfolio Managers

The professionals of the subadvisor that are jointly and primarily responsible for the day-to-day management of the Fund are:

Name & Title	Length of Service as Fund's Portfolio Manager
Michael Denlinger, Managing Director	Since 2020
David Dowden, Managing Director	Since Fund's inception
John Lawlor, Managing Director	Since Fund's inception
Frances Lewis, Senior Managing Director	Since 2018
Scott Sprauer, Senior Managing Director	Since Fund's inception

Purchase and Sale of Fund Shares

Unlike conventional mutual funds, the Fund issues and redeems Shares on a continuous basis, at NAV, only in large blocks of Shares called "Creation Units." Individual Shares of the Fund may only be purchased and sold on the secondary market through a broker-dealer. Since Shares of the Fund trade on securities exchanges in the secondary market at their market price rather than their NAV, the Fund's Shares may trade at a price greater than (premium) or less than (discount) the Fund's NAV. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares of the Fund (bid) and the lowest price a seller is willing to accept for Shares of the Fund (ask) when buying or selling Shares in the secondary market (the "bid-ask spread"). Recent information, including the Fund's NAV, market price, premiums and discounts, and bid-ask spreads, is available online at newyorklifeinvestments.com/etf.

Tax Information

The Fund intends to distribute tax-exempt income. The Fund intends to meet certain U.S. federal tax requirements so that distributions of the tax-exempt interest it earns may be treated as exempt-interest dividends. A portion of the exempt-interest dividends may be subject to the alternative minimum tax on individuals and may have other tax consequences to certain shareholders. However, a portion of the Fund's distributions may be subject to U.S. federal income tax, and may be taxed as ordinary income, qualified dividend income and/or capital gains, unless you are investing through a tax-deferred arrangement, such as a 401(k) plan or individual retirement account, in which case you may be subject to U.S. federal income tax upon withdrawal from such a tax-advantaged account. You should consult your tax advisor about your specific situation.

Financial Intermediary Compensation

If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Advisor or other related companies may pay the intermediary for marketing activities and presentations, educational training programs, conferences, the development of technology platforms and reporting systems or other services related to the sale or promotion of the Fund. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

Summary Information

IQ MacKay California Municipal Intermediate ETF

Investment Objective

The IQ MacKay California Municipal Intermediate ETF (the "Fund") seeks current income exempt from federal and California income taxes.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund ("Shares"). Investors may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example set forth below.

Shareholder Fees (fees paid directly from your investment): None

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment):

Management Fee	0.45%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.24%
Acquired Fund Fees and Expense ^(a)	0.01%
Total Annual Fund Operating Expenses	0.70%
Expense Waiver/Reimbursement ^(b)	0.34%
Total Annual Fund Operating Expenses After Expense Waiver/Reimbursement	0.36%

(a) The Total Annual Fund Operating Expenses may not correlate to the ratio of expenses to average net assets as reported in the "Financial Highlights" section of the Prospectus, which reflects the operating expenses of the Fund and does not include Acquired Fund Fees & Expenses. Acquired Fund Fees & Expenses represent the Fund's pro rata share of fees and expenses incurred indirectly as a result of investing in other funds, including ETFs and money market funds.

(b) IndexIQ Advisors LLC (the "Advisor") has contractually agreed to waive or reduce its management fee and/or reimburse expenses of the Fund in an amount that limits "Total Annual Fund Operating Expenses" (exclusive of interest, taxes, brokerage fees and commissions, dividends paid on short sales, acquired fund fees and expenses, and extraordinary expenses) to not more than 0.35% of the average daily net assets of the Fund. The agreement will remain in effect permanently unless terminated by the Board of Trustees of the Fund.

Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain at current levels. The return of 5% and estimated expenses are for illustration purposes only, and should not be considered indicators of expected Fund expenses or performance, which may be greater or less than the estimates. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

<u>1 Year</u>	<u>3 Years</u>	<u>5 Years</u>	<u>10 Years</u>
\$37	\$116	\$202	\$456

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual Fund operating expenses or in the example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rates was 98% of the average value of its portfolio. This rate excludes the value of the portfolio securities received or delivered as a result of in-kind creations or redemptions of the Shares.

Principal Investment Strategies

The Fund, under normal circumstances, invests at least 80% of its assets (net assets plus any borrowings for investment purposes) in municipal bonds, whose interest is, in the opinion of bond counsel for the issuers at the time of issuance, exempt from federal and California income taxes. Municipal bonds are generally debt obligations issued by or on behalf of states, territories and possessions of the United States, and their political subdivisions, agencies and instrumentalities that provide income free from federal, state and potentially local

income taxes. If the interest on a particular municipal bond is exempt from federal and California income taxes, the Fund will treat the bond as qualifying for purposes of the 80% policy even though the issuer of the bond may be located outside of California.

Although the Fund may invest in municipal bonds rated in any rating category or in unrated municipal bonds, MacKay Shields LLC (the "Subadvisor") intends to invest primarily in investment grade quality bonds as rated by at least one nationally recognized statistical rating organization ("NRSRO"), or, if unrated, judged to be of comparable quality by the Subadvisor. The Fund may invest up to 20% of its net assets in municipal bonds that are rated below investment grade as rated by an NRSRO, (such securities rated lower than BBB- and Baa3), or, if unrated, judged to be of comparable quality by the Subadvisor. Securities that are rated below investment grade by NRSROs are commonly referred to as "high-yield securities" or "junk bonds." If NRSROs assign different ratings to the same security, the Fund will use the higher rating for purposes of determining the security's credit quality. The Fund generally will maintain a portfolio modified duration to worst of 3 to 8 years. Duration to worst is the duration of a bond computed using the bond's nearest call date or maturity, whichever comes first. This measure ignores future cash flow fluctuations due to embedded optionality. Duration is a measure used to determine the sensitivity of a security's price to changes in interest rates. The longer a security's duration, the more sensitive it will be to changes in interest rates.

Municipal bonds include, among other instruments, general obligation bonds, revenue bonds, industrial revenue bonds, industrial development bonds, private activity bonds, as well as short-term, tax-exempt obligations such as municipal notes and variable rate demand obligations. The Fund may invest up to 20% of its net assets in municipal bonds subject to the federal alternative minimum tax and municipal bonds that pay interest that is subject to federal and/or California income taxes. The Fund may invest more than 25% of its total assets in municipal bonds that are related in such a way that an economic, business or political development or change affecting one such security could also affect the other securities.

If the supply of California state tax-exempt municipal bonds is insufficient to meet the Fund's investment needs, the Fund may invest in municipal bonds issued by other states. Municipal bonds issued by other states purchased by the Fund will generally be exempt from federal income taxes but may not be exempt from California income taxes.

In choosing investments, the Subadvisor analyzes the credit quality of issuers and considers the yields available on municipal bonds with different maturities.

The Subadvisor uses active management in an effort to identify municipal bonds it believes to be mispriced and to build a consistent yield advantage. The Subadvisor focuses on reducing volatility through a disciplined investment process, which includes fundamental, "bottom-up" credit research and risk management. In addition, the Subadvisor reviews macroeconomic events, technical in the municipal market, tax policies and analyzes individual municipal securities and sectors. The Subadvisor's investment process includes a risk analysis that gives consideration to a variety of security-specific risks, including but not limited to, environmental, social and governance ("ESG") risks that may have a material impact on the performance of a security. In addition to proprietary research, the Subadvisor may use screening tools and, to the extent available, third-party data to identify ESG risk factors that may not have been captured through its own research. The Subadvisor's consideration of ESG risk is weighed against other criteria and therefore does not mean that any sectors, industries or individual securities are explicitly excluded from the Fund.

The Subadvisor may sell a security if it no longer believes the security will contribute to meeting the investment objective of the Fund. In considering whether to sell a security, the Subadvisor may evaluate, among other things, the condition of the economy and meaningful changes in the issuer's financial condition.

Principal Risks

As with all investments, there are certain risks of investing in the Fund. The Shares will change in value and you could lose money by investing in the Fund. An investment in the Fund does not represent a complete investment program. An investment in the Fund is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. You should consider carefully the following risks before investing in the Fund. A more complete discussion of Principal Risks is included under "Description of the Principal Risks of the Fund."

Alternative Minimum Tax Risk

Although the interest received from municipal securities is generally exempt from federal income tax, the Fund may invest in municipal securities subject to the federal alternative minimum tax. Accordingly, an investment in the Fund could cause shareholders to be subject to the federal alternative minimum tax.

Authorized Participant Concentration Risk

Only certain large institutions may engage in creation or redemption transactions directly with the Fund (each, an "Authorized Participant"). The Fund has a limited number of institutions that may act as Authorized Participants on an agency basis (i.e., on behalf of other market participants). To the extent that those Authorized Participants exit the business or are unable to proceed with creation and/or redemption orders with the Fund and no other Authorized Participant is able to step forward to engage in creation and redemption transactions with the Fund, Shares may be more likely to trade at a premium or discount to NAV and possibly face trading halts and/or delisting.

California State Specific Risk

Because the Fund invests principally in municipal bonds issued by, or on behalf of, the State of California, and its political subdivisions, agencies and instrumentalities, events in California may affect the value of the Fund's investments and performance. These events may include fiscal or political policy changes, tax base erosion, budget deficits and other financial difficulties. Any deterioration of California's fiscal situation and economic situation of its municipalities could cause greater volatility and increase the risk of investing in California.

Cash Transactions Risk

The Fund currently intends to effect creations and redemptions principally for cash, rather than for in-kind securities. For this reason, the Fund may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds. The Fund may recognize a capital gain on these sales that might not have been incurred if the Fund had made a redemption in-kind. This may decrease the tax efficiency of the Fund compared to ETFs that utilize an in-kind redemption process.

Credit Risk

Credit risk is the risk that the issuer or guarantor of a debt instrument or the counterparty to a derivatives contract, repurchase agreement or loan of portfolio securities will be unable or unwilling to make its timely interest and/or principal payments when due or otherwise honor its obligations. Changes in an issuer's or counterparty's credit rating or the market's perception of an issuer's or counterparty's creditworthiness may also adversely affect the value of the Fund's investment in that issuer. The degree of credit risk depends on an issuer's or counterparty's financial condition and on the terms of an obligation.

Cyber Security Risk

The Fund is susceptible to operational risks through breaches in cyber security. Such events may cause the Fund to lose proprietary information, suffer data corruption or lose operational capacity and could cause the Fund to incur regulatory penalties, reputational damage, additional compliance costs associated with corrective measures and/or financial loss. In addition, cyber security breaches of the securities issuers or the Fund's third-party service providers can also subject the Fund to many of the same risks associated with direct cyber security breaches. Although the Fund has established risk management systems designed to reduce the risks associated with cyber security, there is no guarantee that such efforts will succeed.

Debt Securities Risk

The risks of investing in debt securities include (without limitation): (i) credit risk, e.g., the issuer or guarantor of a debt security may be unable or unwilling (or be perceived as unable or unwilling) to make timely principal and/or interest payments or otherwise honor its obligations; (ii) interest rate risk, e.g., when interest rates go up, the value of a debt security generally goes down, and when interest rates go down, the value of a debt security generally goes up; (iii) liquidity risk and valuation risk, e.g., debt securities generally do not trade on a securities exchange, making them generally less liquid and more difficult to value than common stock; (iv) call risk and income risk, e.g., during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund's income if the proceeds are reinvested at lower interest rates; and (v) extension risk, e.g., if interest rates rise, repayments of debt securities may occur more slowly than anticipated by the market, which may drive the prices of these securities down because their interest rates are lower than the current interest rate and the securities remain outstanding longer. Debt securities most frequently trade in institutional round lot size transactions. If the Fund purchases bonds in amounts less than the institutional round lot size, which are frequently referred to as "odd" lots, the odd lot size positions may have more price volatility than institutional round lot size positions. The Fund uses a third-party pricing service to value bond holdings and the pricing service values bonds assuming orderly transactions of an institutional round lot size.

Focused Investment Risk

To the extent that the Fund invests a large percentage of its assets in a single asset class or the securities of issuers within the same country, group of countries, region, industry, group of industries or sector, an adverse

economic, market, political or regulatory development may affect the value of the Fund's investments more than if the Fund were more broadly diversified. Different asset classes, countries, groups of countries, regions, industries, groups of industries or sectors tend to go through cycles of outperformance and underperformance in comparison to each other and to the general financial markets.

High-Yield Municipal Bond Risk

High-yield or non-investment grade municipal bonds (commonly referred to as "junk bonds") may be subject to increased liquidity risk as compared to other high-yield debt securities. There may be little or no active trading market for certain high-yield municipal bonds, which may make it difficult for the Fund to sell such bonds at or near their perceived value. In such cases, the value of a high-yield municipal bond may decline dramatically, even during periods of declining interest rates. The high-yield municipal bonds in which the Fund intends to invest may be more likely to pay interest that is includable in taxable income for purposes of the federal alternative minimum tax than other municipal bonds.

Income Risk

The Fund's income may decline when interest rates fall or if there are defaults in its portfolio. This decline can occur because the Fund may subsequently invest in lower-yielding securities when securities in its portfolio mature or the Fund otherwise needs to purchase additional securities.

Interest Rate Risk

An increase in interest rates may cause the value of securities held by the Fund to decline. Fixed income securities with longer durations tend to be more sensitive to changes in interest rates, making them more volatile than securities with shorter durations or floating or adjustable interest rates. The negative impact on the Fund from potential interest rate increases could be swift and significant, including falling market values, increased redemptions and reduced liquidity. The Fund may be subject to a greater risk of rising interest rates during periods of low interest rates.

When interest rates rise, certain obligations will be paid off by the issuer (or other obligated party) more slowly than anticipated, causing the value of these securities to fall. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value. The value of securities with longer maturities generally changes more in response to changes in interest rates than does the value of securities with shorter maturities. During periods of falling interest rates, an issuer of a callable security held by the Fund may "call" or repay the security before its stated maturity, which may result in the Fund having to reinvest the proceeds in securities with lower yields, resulting in a decline in the Fund's income, or in securities with greater risks or with other less favorable features.

Issuer Risk

The performance of the Fund depends on the performance of individual securities to which the Fund has exposure. Changes to the financial condition or credit rating of an issuer of those securities may cause the value of the securities to decline.

Liquidity Risk

Liquidity risk exists when particular investments are difficult to purchase or sell. Certain investments may be subject to restrictions on resale, trade over-the-counter or in limited volume, or lack an active trading market. Accordingly, the Fund may not be able to sell or close out of such investments at favorable times or prices (or at all), or at the prices approximating those at which the Fund currently values them. Illiquid securities may trade at a discount from comparable, more liquid investments and may be subject to wide fluctuations in market value.

Market Risk

Market risks include political, regulatory, market and economic developments, including developments that impact specific economic sectors, industries or segments of the market, which may affect the Fund's value. Turbulence in financial markets, tariffs and other protectionist measures, political developments and uncertainty, central bank policy, and reduced liquidity in equity, credit and fixed income markets may negatively affect many issuers worldwide, which could have an adverse effect on the Fund. During a general downturn in the securities markets, multiple asset classes may be negatively affected. Geopolitical and other events, including war, terrorism, economic uncertainty, trade disputes, public health crises and related geopolitical events have led, and in the future may lead, to disruptions in the U.S. and world economies and markets, which may increase financial market volatility and have significant adverse direct or indirect effects

on the Fund and its investments. Market disruptions could cause the Fund to lose money, experience significant redemptions, and encounter operational difficulties. Although multiple asset classes may be affected by a market disruption, the duration and effects may not be the same for all types of assets.

Money Market/Short-Term Securities Risk

To the extent the Fund holds cash or invests in money market or short-term securities, the Fund may be less likely to achieve its investment objective. In addition, it is possible that the Fund's investments in these instruments could lose money.

Municipal Bond Risk

Issuers, including governmental issuers, may be unable to pay their obligations as they come due. The values of municipal bonds that depend on a specific revenue source to fund their payment obligations may fluctuate as a result of actual or anticipated changes in the cash flows generated by the revenue source or changes in the priority of the municipal obligation to receive the cash flows generated by the revenue source. The values of municipal bonds held by the Fund may be adversely affected by local political and economic conditions and developments. Adverse conditions in an industry significant to a local economy could have a correspondingly adverse effect on the financial condition of local issuers. This risk would be heightened to the extent that the Fund invests a substantial portion of its assets in municipal bonds issued pursuant to similar projects or whose interest is paid solely from revenues of similar projects. In addition, income from municipal bonds held by the Fund could be declared taxable because of, among other things, unfavorable changes in tax laws, adverse interpretations by the Internal Revenue Service or state tax authorities, or noncompliant conduct of an issuer or other obligated party. Loss of tax-exempt status may cause interest received and distributed to shareholders by the Fund to be taxable and may result in a significant decline in the values of such municipal securities. There are various different types of municipal bonds, each with its own unique risk profile. Some of these risks include:

- *General Obligation Bonds Risk* — timely payments depend on the issuer's credit quality, ability to raise tax revenues and ability to maintain an adequate tax base;
- *Revenue Bonds (including Industrial Development Bonds) Risk* — timely payments depend on the money earned by the particular facility or class of facilities, or the amount of revenues derived from another source, and may be negatively impacted by the general credit of the user of the facility;
- *Private Activity Bonds Risk* — municipalities and other public authorities issue private activity bonds to finance development of industrial facilities for use by a private enterprise, which is solely responsible for paying the principal and interest on the bonds, and payment under these bonds depends on the private enterprise's ability to do so;
- *Moral Obligation Bonds Risk* — moral obligation bonds are generally issued by special purpose public authorities of a state or municipality. If the issuer is unable to meet its obligations, repayment of these bonds becomes a moral commitment, but not a legal obligation, of the state or municipality;
- *Municipal Notes Risk* — municipal notes are shorter-term municipal debt obligations that pay interest that is, in the opinion of bond counsel for the issuer at the time of issuance, generally excludable from gross income for federal income tax purposes (except that the interest may be includable in taxable income for purposes of the federal alternative minimum tax) and that have a maturity that is generally one year or less. If there is a shortfall in the anticipated proceeds, the notes may not be fully repaid and the Fund may lose money; and
- *Municipal Lease Obligations Risk* — in a municipal lease obligation, the issuer agrees to make payments when due on the lease obligation. Although the issuer does not pledge its unlimited taxing power for payment of the lease obligation, the lease obligation is secured by the leased property.

Municipal Bond Market Liquidity Risk

Inventories of municipal bonds held by brokers and dealers may decrease, lessening their ability to make a market in these securities. Any reduction in market-making capacity has the potential to decrease the Fund's ability to buy or sell municipal bonds and increase price volatility and trading costs, particularly during periods of economic or market stress. As a result, the Fund may be forced to accept a lower price to sell a municipal bond, to sell other securities to raise cash, or to give up an investment opportunity, any of which could have a negative effect on performance.

Municipal Insurance Risk

The Fund's investments may include investments in insured municipal bonds. Municipal security insurance does not guarantee the value either of individual municipal securities or of Shares of the Fund. In addition, a municipal security insurance policy generally will not cover: (i) repayment of a municipal security before maturity (redemption), (ii) prepayment or payment of an acceleration premium (except for a mandatory sinking fund redemption) or any other provision of a bond indenture that advances the maturity of the bond or (iii) non-payment of principal or interest caused by negligence or bankruptcy of the paying agent. A mandatory sinking fund redemption may be a provision of a municipal security issue whereby part of the municipal security issue may be retired before maturity. Market conditions or changes to ratings criteria could adversely impact the ratings of municipal bond insurance companies. Downgrades and withdrawal of ratings from municipal bond insurers have substantially limited the availability of insurance sought by municipal bond issuers, thereby reducing the supply of insured municipal bonds that meet the Fund's investment guidelines or the ability of the Fund to purchase insurance on municipal bonds held by the Fund. A rating downgrade of a municipal bond insurer could negatively impact the market value of insured municipal bonds held by the Fund. If the insurer of a defaulted municipal bond were to become unable or unwilling to pay the principal or interest on the defaulted municipal bond, the Fund would incur losses.

Operational Risk

The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund and Advisor seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address significant operational risks.

Portfolio Management Risk

The Fund is subject to portfolio management risk because it is an actively managed portfolio. In managing the Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result or, while it may be the desired result, may underperform other types of investment strategies. The Subadvisor may give consideration to certain ESG criteria when evaluating an investment opportunity. The application of ESG criteria may result in the Fund (i) having exposure to certain securities or industry sectors that are significantly different than the composition of the Fund's benchmark; and (ii) performing differently than other funds and strategies in its peer group that do not take into account ESG criteria or the Fund's benchmark. There can be no guarantee that the Fund will meet its investment objective(s).

Portfolio Turnover Risk

The Fund's strategy may frequently involve buying and selling portfolio securities to rebalance the Fund's investment exposures. High portfolio turnover may result in the Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders. Portfolio turnover risk may cause a Fund's performance to be less than expected.

Private Placement and Restricted Securities Risk

The Fund may invest in privately issued securities, including those which may be resold only in accordance with Rule 144A under the Securities Act of 1933, as amended. Securities acquired in a private placement generally are subject to strict restrictions on resale, and there may be no market or a limited market for the resale of such securities. Therefore, the Fund may be unable to dispose of such securities when it desires to do so or at the most favorable price. This potential lack of liquidity also may make it more difficult to accurately value these securities.

Secondary Market Trading Risk

Although the Fund's Shares are listed for trading on one or more securities exchanges, there can be no assurance that an active trading market for such Shares will develop or be maintained by market makers or

Authorized Participants. The trading of Shares on securities exchanges is subject to the risk of irregular trading activity. Securities exchanges have requirements that must be met in order for Shares to be listed. There can be no assurance that the requirements of an exchange necessary to maintain the listing of Shares will continue to be met. This risk is particularly acute for funds that fail to attract a large number of shareholders. Pursuant to an exchange's "circuit breaker" rules, trading in the Fund's Shares may be halted due to extraordinary market volatility. Additionally, market makers are under no obligation to make a market in the Fund's Shares and Authorized Participants are not obligated to submit purchase or redemption orders for creation units. In the event market makers cease making a market in the Fund's Shares or Authorized Participants stop submitting purchase or redemption orders for creation units, the Fund's Shares may trade at a larger premium or discount to its NAV.

Trading Price Risk

Although it is generally expected that the market price of the Fund's Shares will approximate the Fund's NAV, there may be times when the market price and the NAV vary significantly. Shares of the Fund trade on securities exchanges at prices at, above or below the Fund's most recent NAV. The NAV of the Fund is calculated at the end of each business day and fluctuates with changes in the market value of the Fund's holdings. The trading price of the Fund's Shares fluctuates continuously throughout trading hours based on market supply of and demand for Shares and the Fund's NAV, among other reasons. As a result, the trading prices of the Fund's Shares may deviate significantly from NAV during periods of market volatility. The market price of the Fund's Shares during the trading day, like the price of any exchange-traded security, includes a "bid/ask" spread charged by market makers or other participants that trade the Shares. In times of severe market disruption, the bid/ask spread can increase significantly. At those times, Shares are most likely to be traded at a discount to NAV, and the discount is likely to be greatest when the price of Shares is falling fastest, which may be the time that an investor most wants to sell their Shares. The risk of wide bid and ask spreads may be especially pronounced for smaller funds. In addition, increased market volatility may cause wider spreads.

Valuation Risk

When valuing the Fund's portfolio investments, if a market quotation is readily available for a portfolio investment, that investment will generally be valued at the market value. However, unlike publicly traded securities that trade on national securities exchanges, there is no central place or exchange for trading most debt securities and thus readily available market quotations are unavailable. Debt securities generally trade on an "over-the-counter" market. Due to the lack of centralized information and trading, and variations in lot sizes of certain debt securities, the valuation of debt securities may carry more uncertainty and risk than that of publicly traded securities. Debt securities are commonly valued by third-party pricing service providers that utilize a range of market-based inputs and assumptions, including readily available market quotations obtained from broker-dealers making markets in such securities, cash flows and transactions for comparable instruments. However, because the available information is less reliable and more subjective, elements of judgment may play a greater role in valuation of debt securities than for other types of securities. Additionally, pricing service providers generally price debt securities assuming orderly transactions of an institutional "round lot" size, but some trades may occur in smaller, "odd lot" sizes, often at lower prices than institutional round lot trades. Valuing the Fund's investments using fair value pricing provided by pricing service providers will result in prices that may differ from current market valuations and that may not be the prices at which those investments could have been sold during the period in which the particular fair values were used. It is possible that the fair value determined for a portfolio instrument may be materially different from the value that could be realized upon the sale of that instrument.

Variable and Floating Rate Instruments Risk

Variable and floating rate instruments include debt securities issued by corporate and governmental entities, bank loans, mortgage-backed securities and asset-backed securities, preferred equity securities and derivative variable rate securities, such as inverse floaters. Variable and floating rate instruments are structured so that the instrument's coupon rate fluctuates based upon the level of a reference rate. A variable or floating rate instrument's coupon rate resets periodically according to its terms. Consequently, in a rising interest rate environment, variable and floating rate instruments with coupon rates that reset infrequently may lag behind the changes in market interest rates.

Performance Information

The following bar chart and table provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns

compare with its benchmark over time. The table that follows the bar chart shows the Fund's average annual total return, both before and after taxes. The Bloomberg California Intermediate Municipal Bond Index is a market value-weighted index of California investment grade tax exempt fixed-rate municipal bonds with maturities of one year or more.

All returns assume reinvestment of dividends and distributions. The Fund's past performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future. Performance reflects fee waivers and/or expense reimbursement in effect, if such waivers or reimbursements were not in place, the Fund's performance would be reduced. Fund performance current to the most recent month-end is available by calling 1-888-474-7725 or by visiting newyorklifeinvestments.com/etf.

The Fund's year-to-date total return as of June 30, 2023 was 2.00%.

Best and Worst Quarter Returns (for the period reflected in the bar chart above)

	Return	Quarter/Year
Highest Return	3.77%	4Q/2022
Lowest Return	-7.79%	1Q/2022

Average Annual Total Returns as of December 31, 2022

	1 Year	Since Inception ⁽¹⁾
Returns before taxes	-12.16%	-11.77%
Returns after taxes on distributions ⁽²⁾	-12.16%	-11.78%
Returns after taxes on distributions and sale of Fund Shares ⁽²⁾	-6.18%	-8.37%
Bloomberg California Intermediate Municipal Bond Index (reflects no deduction for fees, expenses or taxes)	-5.90%	-5.52%

(1) The Fund commenced operations on December 21, 2021.

(2) After-tax returns are calculated using the highest historical individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on your tax situation and may differ from those shown and are not relevant if you hold your Shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts. In some cases the return after taxes may exceed the return before taxes due to an assumed tax benefit from any losses on a sale of Fund Shares at the end of the measurement period.

Investment Advisor and Subadvisor

IndexIQ Advisors LLC is the investment advisor to the Fund.

MacKay Shields LLC is the investment subadvisor to the Fund.

Portfolio Managers

The professionals of the subadvisor that are jointly and primarily responsible for the day-to-day management of the Fund are:

<u>Name & Title</u>	<u>Length of Service as Fund's Portfolio Manager</u>
Michael Denlinger, Managing Director	Since Fund's Inception
John Lawlor, Managing Director	Since Fund's Inception
Frances Lewis, Senior Managing Director	Since August 2023
Scott Sprauer, Senior Managing Director	Since Fund's Inception

Purchase and Sale of Fund Shares

Unlike conventional mutual funds, the Fund issues and redeems Shares on a continuous basis, at NAV, only in large blocks of Shares called "Creation Units." Individual Shares of the Fund may only be purchased and sold on the secondary market through a broker-dealer. Since Shares of the Fund trade on securities exchanges in the secondary market at their market price rather than their NAV, the Fund's Shares may trade at a price greater than (premium) or less than (discount) the Fund's NAV. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares of the Fund (bid) and the lowest price a seller is willing to accept for Shares of the Fund (ask) when buying or selling Shares in the secondary market (the "bid-ask spread"). Recent information, including the Fund's NAV, market price, premiums and discounts, and bid-ask spreads, is available online at newyorklifeinvestments.com/etf.

Tax Information

The Fund intends to distribute tax-exempt income. The Fund intends to meet certain U.S. federal tax requirements so that distributions of the tax-exempt interest it earns may be treated as exempt-interest dividends. A portion of the exempt-interest dividends may be subject to the alternative minimum tax on individuals and may have other tax consequences to certain shareholders. However, a portion of the Fund's distributions may be subject to U.S. federal income tax, and may be taxed as ordinary income, qualified dividend income and/or capital gains, unless you are investing through a tax-deferred arrangement, such as a 401(k) plan or individual retirement account, in which case you may be subject to U.S. federal income tax upon withdrawal from such a tax-advantaged account. You should consult your tax advisor about your specific situation.

Financial Intermediary Compensation

If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Advisor or other related companies may pay the intermediary for marketing activities and presentations, educational training programs, conferences, the development of technology platforms and reporting systems or other services related to the sale or promotion of the Fund. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

Overview

The Trust is an investment company consisting of a number of separate investment portfolios (each, a "Fund" and together, the "Funds") that are structured as exchange-traded funds ("ETFs"). Each share of a Fund represents an ownership interest in the securities and other instruments comprising a Fund's portfolio. Unlike shares of a mutual fund, which can be bought and redeemed from the issuing fund by all shareholders at a price based on net asset value ("NAV"), shares of an ETF (such as the Funds) are listed on a national securities exchange and trade in the secondary market at market prices that change throughout the day, and may differ from a Fund's NAV.

IndexIQ Advisors LLC (the "Advisor") is the investment advisor to each Fund. MacKay Shields LLC and NYL Investors LLC serve as subadvisors and are referred herein as "Subadvisor" as the context requires, and collectively are referred to as "Subadvisors." NYL Investors LLC serves as subadvisor to the IQ Ultra Short Duration ETF and MacKay Shields LLC serves as subadvisor to the IQ MacKay ESG Core Plus Bond ETF, IQ MacKay ESG High Income ETF, IQ MacKay Multi-Sector Income ETF, IQ MacKay Municipal Insured ETF, IQ MacKay Municipal Intermediate ETF, and IQ MacKay California Municipal Intermediate ETF.

Information about each Fund's investment objective, principal investment strategies, investment practices and principal risks appears in the relevant summary section for each Fund at the beginning of the Prospectus. The information below describes in greater detail the principal and other investments, investment practices and risks pertinent to the Funds. Some of the Funds may use the investments/strategies discussed below more than other Funds. Not all investments/strategies of the Funds may be described in this Prospectus.

Description of the Principal Strategies of the Funds

The Funds are actively managed ETFs and thus do not seek to replicate the performance of a specific index. Instead, each Fund uses an active investment strategy to meet its investment objective. Each subadvisor, subject to the oversight of the Advisor and Board, has discretion on a daily basis to manage each Fund's portfolio in accordance with the Fund's investment objective and investment policies. Consequently, investors should not expect a Fund's returns to track the returns of any index or market for any period of time.

Each Fund has a distinct investment objective and policies. Except as otherwise stated in this Prospectus or the Funds' Statement of Additional Information (the "SAI"), the investment objective and policies of each Fund are non-fundamental and may be changed by the Board of Trustees of the Trust (the "Board") without shareholder approval. There can be no assurance that a Fund's objective will be achieved.

In accordance with Rule 35d-1 under the Investment Company Act of 1940 (the "1940 Act"), certain Funds have each adopted a policy that each will, under normal circumstances, invest at least 80% of the value of its assets (net assets plus the amount of any borrowings for investment purposes) in investments of the type suggested by the Fund's name. A Fund may count investments in any derivatives or underlying funds toward various guideline tests (such as the 80% test required under Rule 35d-1 under the 1940 Act).

In accordance with Rule 35d-1 under the 1940 Act, the following Funds have adopted a "fundamental" policy, which means that they may be changed only by the vote of a majority of a Fund's outstanding shares as defined in the 1940 Act:

IQ MacKay Municipal Insured ETF and IQ MacKay Municipal Intermediate ETF have each adopted a policy that it will, under normal circumstances, invest at least 80% of the value of its assets (net assets plus the amount of any borrowings for investment purposes) in debt securities whose interest is, in the opinion of bond counsel for the issuer at the time of issuance, exempt from federal income tax.

IQ MacKay California Municipal Intermediate ETF has adopted a policy that it will invest at least 80% of the value of its assets in municipal bonds whose interest is, in the opinion of bond counsel for the issuers at the time of issuance, exempt from federal and California income taxes.

In accordance with Rule 35d-1 under the 1940 Act, the following Funds have adopted a "non-fundamental" policy which means that it may be changed without the vote of a majority of a Fund's outstanding shares as defined in the 1940 Act. A Fund that has adopted such a policy will provide the Fund's shareholders with at least 60 days' prior notice of any changes in the Fund's non-fundamental investment policy with respect to investments of the type suggested by its name:

IQ MacKay ESG Core Plus Bond ETF has adopted a policy that it will, under normal circumstances, invest at least 80% of the value of its assets (net assets plus the amount of any borrowings for investment purposes) in bonds, which include all types of debt securities, such as: debt or debt-related securities issued or guaranteed by the U.S. or foreign governments, their agencies or instrumentalities; obligations of international or supranational entities; debt securities issued by U.S. or foreign corporate entities; zero coupon bonds; municipal bonds; mortgage-related and other asset-backed securities; and loan participation interests.

IQ MacKay ESG High Income ETF has adopted a policy that it will, under normal circumstances, invest at least 80% of the value of its assets (net assets plus the amount of any borrowings for investment purposes) in high-yield corporate debt instruments, including all types of high-yield domestic and foreign corporate debt securities that are rated below investment grade by a nationally recognized statistical rating organization ("NRSRO") (such securities rated lower than BBB- and Baa3), or, if unrated, judged to be of comparable quality by the Fund's Subadvisor.

IQ MacKay Municipal Insured ETF has adopted a policy that it will, under normal circumstances, invest at least 80% of the value of its assets (net assets plus the amount of any borrowings for investment purposes) in insured Municipal Bonds.

Unless otherwise indicated, all of the percentage limitations applicable to a Fund apply only at the time of an acquisition or encumbrance of securities or assets of the Fund, except that any borrowings by the Fund that exceeds applicable limitations must be reduced to meet such limitations within the period required by the 1940 Act. Therefore, a change in the percentage that results from a relative change in values or from a change in the Fund's assets will not be considered a violation of the Fund's policies or restrictions and the Fund's future investments will be made in a manner that will bring the Fund into compliance with the applicable requirement. "Value" for the purposes of all investment restrictions shall mean the value used in determining the Fund's NAV.

To the extent a Fund makes investments on behalf of a Fund that is regulated by the Commodities Futures Trading Commission, it intends to do so in accordance with Rule 4.5 under the Commodity Exchange Act ("CEA"). The Advisor has filed a notice of eligibility for exclusion from the definition of the term "commodity pool operator" in accordance with Rule 4.5 and is therefore not subject to registration as a commodity pool operator under the CEA.

Each Fund's portfolio holdings will be disclosed on the Trust's website (newyorklifeinvestments.com/eff) daily after the close of trading on a national securities exchange (the "Exchange") and prior to the opening of trading on the Exchange the following day.

Additional Investment Strategies

Borrowing Money

Each Fund may borrow money from a bank as permitted by the 1940 Act or the rules thereunder, or by the U.S. Securities and Exchange Commission ("SEC") or other regulatory agency with authority over the Fund, but only for temporary or emergency purposes. The 1940 Act presently allows a fund to borrow from any bank (including pledging, mortgaging or hypothecating assets) in an amount up to 33 1/3% of its total assets (not including temporary borrowings not in excess of 5% of its total assets).

Temporary Defensive Positions

In times of unusual or adverse market, economic or political conditions or abnormal circumstances (such as large cash inflows or anticipated large redemptions), each Fund may, for temporary defensive purposes which may be for a prolonged period, invest outside the scope of its principal investment strategies. Under such conditions, a Fund may not invest in accordance with its investment objective or principal investment strategies and, as a result, there is no assurance that the Fund will achieve its investment objective. Under such conditions, each Fund may invest without limit in investment grade securities and may invest in U.S. government securities or other high quality money market instruments.

Securities Lending

A Fund may lend its portfolio securities. A securities lending program allows a Fund to receive a portion of the income generated by lending its securities and investing the respective collateral. In connection with such loans, a Fund receives liquid collateral equal to at least 102% (105% for foreign securities) of the value of the portfolio securities being lent. This collateral is marked to market on each trading day.

Additional Information About Risks

The principal risks of investing in the Funds are described below, which may result in a loss of your investment. As indicated in the table below, not all of these risks are principal risks of investing in each Fund. The Funds may be subject to risks to different degrees. The fact that a particular risk is not identified as a principal risk for a Fund does not mean that the Fund is prohibited from investing in securities or investments that give rise to that risk. There can be no assurance that a Fund will achieve its investment objective.

Investors should be aware that in light of the current uncertainty, volatility and state of economies, financial markets, and labor and health conditions around the world, the risks below are heightened significantly compared to normal conditions and therefore may subject a Fund's investments and a shareholder's investment in a Fund to reduced yield and/or income and sudden and substantial losses. The fact that a particular risk below is not specifically identified as being heightened under current conditions does not mean that the risk is not greater than under normal conditions. Additional information about the investment practices of the Funds and risks pertinent to these practices is included in the SAI. The following information regarding principal investment strategies and risks is provided in alphabetical order and not necessarily in order of importance.

Asset-Backed Securities Risk

Asset-backed securities are securities that represent interests in, and whose values and payments are based on, a "pool" of underlying assets, which may include, among others, lower-rated debt securities and corporate loans, consumer loans or mortgages and leases of property. Asset-backed securities include collateralized debt obligations, collateralized bond obligations, and collateralized loan obligations and other similarly structured vehicles. As with other debt securities, asset-backed securities are subject to credit risk, extension risk, interest rate risk, liquidity risk and valuation risk. Certain asset-backed securities do not have the benefit of the same security interest in the related collateral as do mortgage-backed securities, nor are they provided government guarantees of repayment. Credit card receivables are generally unsecured, and the debtors are entitled to the protection of a number of state and federal consumer credit laws, many of which give such debtors the right to set off certain amounts owed on the credit cards, thereby reducing the balance due. In addition, some issuers of automobile receivables permit the servicers to retain possession of the underlying obligations. If the servicer were to sell these obligations to another party, there is a risk that the purchaser would acquire an interest superior to that of the holders of the related automobile receivables. The impairment of the value of collateral or other assets underlying an asset-backed security, such as a result of non-payment of loans or non-performance of underlying assets, may result in a reduction in the value of such asset-backed securities and losses to a Fund.

Investments in mortgage-related securities make an investor more susceptible to adverse economic, political or regulatory events that affect the value of real estate. Mortgage-related securities are also significantly affected by the rate of prepayments and modifications of the mortgage loans underlying those securities, as well as by other factors such as borrower defaults, delinquencies, realized or liquidation losses and other shortfalls. Mortgage-related securities are particularly sensitive to prepayment risk, given that the term to maturity for mortgage loans is generally substantially longer than the expected lives of those securities. As the timing and amount of prepayments cannot be accurately predicted, the timing of changes in the rate of prepayments of the mortgage loans may significantly affect a Fund's actual yield to maturity on any mortgage-related securities. Along with prepayment risk, mortgage-related securities are significantly affected by interest rate risk. In a low interest rate environment, mortgage loan prepayments would generally be expected to increase due to factors such as refinancings and loan modifications at lower interest rates. In contrast, if prevailing interest rates rise, prepayments of mortgage loans would generally be expected to decline and therefore extend the weighted average lives of mortgage-related securities held or acquired by a Fund. Fund investments in mortgage-backed securities issued by Ginnie Mae are backed by the full faith and credit of the U.S.

government. Fund investments in mortgage-backed securities issued by Fannie Mae and Freddie Mac are not backed by the full faith and credit of the U.S. government, and there can be no assurance that the U.S. government would provide financial support to its agencies or instrumentalities where it is not obligated to do so. Impairment of the underlying obligations or collateral, such as by non-payment, will reduce a mortgage-related security's value. Enforcing rights against such collateral in events of default may be difficult or insufficient. These securities may have a structure that makes their reaction to interest rate changes and other factors difficult to predict, making their value highly volatile.

Alternative Minimum Tax Risk

Although the interest received from municipal securities is generally exempt from federal income tax, a Fund may invest in municipal securities subject to the federal alternative minimum tax. Therefore, all or a portion of a Fund's otherwise exempt interest, may be taxable to shareholders subject to (or result in an increased liability under) the federal alternative minimum tax.

Authorized Participant Concentration Risk

Only an Authorized Participant may engage in creation or redemption transactions directly with a Fund. Each Fund has a limited number of institutions that may act as Authorized Participants on an agency basis (i.e., on behalf of other market participants). To the extent that Authorized Participants exit the business or are unable to proceed with creation and/or redemption orders with a Fund and no other Authorized Participant is able to step forward to create or redeem Creation Units, Shares may be more likely to trade at a premium or discount to NAV and possibly face trading halts and/or delisting.

Bank Loans Risk

Investments in bank loans are subject to the same risks as investments in other types of debt securities, including credit risk, interest rate risk, liquidity risk and valuation risk that may be heightened because of the limited public information available regarding bank loans and because loan borrowers may be leveraged and tend to be more adversely affected by changes in market or economic conditions. A Fund may invest in bank loans through participations in such loans. Investments in a lender's portion of a bank loan typically will result in a Fund having a contractual relationship only with such lender, not with the borrower. If a Fund holds a bank loan through another financial institution or relies on a financial institution to administer the loan, its receipt of principal and interest on the loan may be subject to the credit risk of that financial institution. It is possible that any collateral securing a loan may be insufficient or unavailable to a Fund, and that the Fund's rights to collateral may be limited by bankruptcy or insolvency laws. Additionally, there is no central clearinghouse for loan trades and the loan market has not established enforceable settlement standards or remedies for failure to settle. As such, the secondary market for bank loans may be subject to irregular trading activity, wide bid/ask spreads and extended trade settlement periods (in some cases longer than 7 days) which may cause a Fund to be unable to realize the full value of its investment.

California State Specific Risk

A Fund invests primarily in municipal bonds issued by or on behalf of the State of California and its political subdivisions, agencies, authorities and instrumentalities. As a result, a Fund is more exposed to the risks affecting issuers of California municipal bonds than is a municipal bond fund that invests more widely.

Most local government agencies within the State, particularly counties, continue to face budget constraints due to limited taxing powers, mandated expenditures for health, welfare and public safety and a weakened economy, among other factors. State and local governments are limited in their ability to levy and raise property taxes and other forms of taxes, fees or assessments, and in their ability to appropriate their tax revenues by a series of constitutional amendments enacted by voter initiatives since 1978. Individual local governments may also have local initiatives that affect their fiscal flexibility. The major sources of revenues for local government, property taxes and sales taxes, as well as fees based on real estate development, have all been adversely impacted by the economic recession. Unfunded pension and other post-retirement liabilities also weigh heavily upon the State as well as many local jurisdictions. While California's economy is broad, it does have major concentrations in technology, aerospace and defense-related manufacturing, trade, entertainment, real estate and financial services, and may be sensitive to economic problems affecting those industries.

To the extent that California experiences economic problems generally, the risk of investing in bonds issued by the State and its political subdivisions, agencies, authorities and instrumentalities, including the risk of potential issuer default. There is a heightened risk that there could be an interruption in payments to bondholders in some

cases. This possibility, along with the risk of a downgrade in the credit rating of the State's general obligation debt, could result in a reduction in the market value of the bonds held by a Fund, which could adversely affect the Fund's NAV or the distributions paid by the Fund. In addition, future California political and economic developments, constitutional amendments, legislative measures, executive orders, administrative regulations, litigation and voter initiatives could have an adverse effect on the debt obligations of California issuers.

Cash Transactions Risk

A Fund currently intends to effect creation and redemptions principally for cash, rather than principally for in-kind securities. As a result, investment in such a fund may be less tax efficient than investment in a conventional ETF. ETFs generally are able to make in-kind redemptions and avoid being taxed on gains on the distributed portfolio securities at the fund level. Because a Fund currently intends to effect redemptions principally for cash, the Fund may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds. A Fund may recognize a capital gain on these sales that might not have been incurred if such Fund had made a redemption in-kind and this may decrease the tax efficiency of the Fund compared to ETFs that utilize an in-kind redemption process. Moreover, cash transactions may have to be carried out over several days if the securities market is relatively illiquid, and this may involve considerable brokerage fees and taxes. These brokerage fees and taxes, which will be higher than if a Fund sold and redeemed its Shares principally in-kind, will be passed on to those purchasing and redeeming Creation Units in the form of creation and redemption transaction fees. In addition, these factors may result in wider spreads between the bid and the offered prices of a Fund's Shares than for ETFs that distribute portfolio securities in-kind.

Contingent Convertible Securities Risk

Contingent convertible securities (CoCos) are hybrid securities most commonly issued by banking institutions that present risks similar to debt securities and convertible securities. CoCos are distinct in that they are intended to either convert into equity or have their principal written down upon the occurrence of certain "triggers." When an issuer's capital ratio falls below a specified trigger level, or in a regulator's discretion depending on the regulator's judgment about the issuer's solvency prospects, a CoCo may be written down, written off or converted into an equity security. Due to the contingent write-down, write-off and conversion feature, CoCos may have substantially greater risk than other securities in times of financial stress. If the trigger level is breached, the issuer's decision to write down, write off or convert a CoCo may be outside its control, and a Fund may suffer a complete loss on an investment in CoCos with no chance of recovery even if the issuer remains in existence. CoCos are usually issued in the form of subordinated debt instruments to provide the appropriate regulatory capital treatment. If an issuer liquidates, dissolves or winds-up before a conversion to equity has occurred, the rights and claims of the holders of the CoCos (such as the Fund) against the issuer generally rank junior to the claims of holders of unsubordinated obligations of the issuer. In addition, if the CoCos are converted into the issuer's underlying equity securities after a conversion event (i.e., a "trigger"), each holder will be further subordinated. CoCos also may have no stated maturity and have fully discretionary coupons. This means coupon payments can be canceled at the issuer's discretion or at the request of the relevant regulatory authority in order to help the bank absorb losses, without causing a default. In general, the value of CoCos is unpredictable and is influenced by many factors including, without limitation: the creditworthiness of the issuer and/or fluctuations in such issuer's applicable capital ratios; supply and demand for CoCos; general market conditions and available liquidity; and economic, financial and political events that affect the issuer, its particular market or the financial markets in general.

Convertible Securities Risk

Convertible securities are bonds, debentures, notes, preferred stocks or other securities that may be converted or exchanged (by the holder or by the issuer, depending on the terms of the securities) into shares of the underlying common stock (or cash or securities of equivalent value) at a stated exchange ratio. If a convertible security held by a Fund is called for redemption or conversion, the Fund could be required to tender it for redemption, convert it into the underlying equity security or sell it to a third party, which may have an adverse effect on the Fund's ability to achieve its investment objective. The market values of convertible securities tend to decline as interest rates increase. However, a convertible security's market value also tends to reflect the market price of the equity security of the issuing company, particularly when the price of the equity security is greater than the convertible security's conversion price (i.e., the predetermined price or exchange ratio at which the convertible security can be converted or exchanged for the underlying equity security). Convertible securities are also exposed to the risk that an issuer will be unable to meet its obligation to make dividend or principal payments when due as a result of changing financial or market conditions. Convertible debt securities generally offer lower interest or dividend yields than non-convertible debt securities of similar credit quality

because of their potential for capital appreciation. Moreover, there can be no assurance that convertible securities will provide current income prior to conversion because the issuers of the convertible securities may default on their obligations. If the convertible security has a conversion or call feature that allows the issuer to redeem the security before the conversion date, the potential for capital appreciation may be diminished. In the event that convertible securities are not optional but mandatory based upon the price of the underlying common stock, a Fund may be subject to additional exposure to loss of income in situations where it would prefer to hold debt.

Corporate Bonds Risk

Corporate bonds are debt obligations issued by corporations. Corporate bonds are generally used by corporations to borrow money from investors. Corporate bonds may be either secured or unsecured. Collateral used for secured debt includes, but is not limited to, real property, equipment, machinery, accounts receivable, stocks, bonds or notes. An unsecured corporate bond is known as a debenture. The investment return of corporate bonds reflects interest earned on the security and changes in the market value of the security. Holders of corporate bonds, known as creditors, have a prior legal claim over common and preferred stockholders as to both income and assets of the issuer for the principal and interest due them and may have a prior claim over other creditors if liens or mortgages are involved. Corporate bonds contain elements of both interest rate risk and credit risk. The market value of a corporate bond generally may be expected to rise and fall inversely with changes in interest rates and may also be affected by the credit rating of the issuer, the issuer's performance and perceptions of the issuer in the marketplace. Corporate bonds usually yield more than government or agency bonds due to the presence of credit risk. There is a risk that the issuers of the securities may not be able to meet their obligations on interest or principal payments at the time called for by an instrument.

Counterparty Risk

A counterparty (the other party to a transaction or an agreement or the party with whom a Fund executes transactions) to a transaction with the Fund may be unable or unwilling to perform its obligations. If a counterparty fails to meet its contractual obligations for any reason, including bankruptcy of the counterparty or its parent, a loss to a Fund may result. A Fund may experience significant delays in obtaining any recovery in an insolvency, bankruptcy, or other reorganization proceeding involving a counterparty (including recovery of any collateral posted by it) and may obtain only a limited recovery or may obtain no recovery in such circumstances. If a Fund holds collateral posted by its counterparty, it may be delayed or prevented from realizing on the collateral in the event of a bankruptcy or insolvency proceeding relating to the counterparty. Under applicable law or contractual provisions, including if a Fund enters into an investment or transaction with a financial institution and such financial institution (or an affiliate of the financial institution) experiences financial difficulties, then the Fund may in certain situations be prevented or delayed from exercising its rights to terminate the investment or transaction, or to realize on any collateral, which may result in the suspension of payment and delivery obligations of the parties under such investment or transactions or in another institution being substituted for that financial institution without the consent of a Fund. Further, a Fund may be subject to "bail-in" risk under applicable law whereby, if required by the financial institution's authority, the financial institution's liabilities could be written down, eliminated or converted into equity or an alternative instrument of ownership. A bail-in of a financial institution may result in a reduction in value of some or all of its securities and, if a Fund holds such securities or has entered into a transaction with such a financial security when a bail-in occurs, the Fund may also be similarly impacted.

Credit Risk

Credit risk is the risk that the issuer or guarantor of a debt instrument or the counterparty to a derivatives contract, repurchase agreement or loan of portfolio securities will be unable or unwilling to make its timely interest and/or principal payments or to otherwise honor its obligations. There are varying degrees of credit risk, depending on an issuer's or counterparty's financial condition and on the terms of an obligation, which may be reflected in the issuer's or counterparty's credit rating. There is the chance that a Fund's portfolio holdings will have their credit ratings downgraded or will default (i.e., fail to make scheduled interest or principal payments), or that the market's perception of an issuer's or counterparty's creditworthiness may worsen, potentially reducing a Fund's income level or Share price. The value of an investment in a Fund may change quickly and without warning in response to issuer defaults, changes in the credit ratings of such Fund's portfolio securities and/or perceptions related thereto.

Currency Risk

Investments directly in foreign (non-U.S.) currencies or in securities that trade in, and receive revenues in, foreign (non-U.S.) currencies are subject to the risk that those currencies will decline in value relative to the U.S. dollar. Currency rates in foreign countries may fluctuate significantly over short periods of time for a number of reasons, including national debt levels and trade deficits, changes in balances of payments and trade, domestic and foreign interest and inflation rates, global or regional political, economic or financial events, monetary policies of governments, actual or potential government intervention and global energy prices. Political instability, the possibility of government intervention and restrictive or opaque business and investment policies may also reduce the value of a country's currency. Government monetary policies and the buying or selling of currency by a country's government may also influence exchange rates. As a result, a Fund's investments in foreign currency denominated securities may reduce the return of the Fund. Because a Fund's NAV is determined on the basis of U.S. dollars, the Fund's NAV may decrease if the value of the non-U.S. currency to which the Fund has exposure depreciates in value relative to the U.S. dollar. This may occur even if the value of the underlying non-U.S. securities increases. Conversely, a Fund's NAV may increase if the value of a non-U.S. currency appreciates relative to the U.S. dollar.

Cyber Security Risk

The Funds are susceptible to operational risks through breaches in cyber security. A breach in cyber security refers to both intentional and unintentional events that may cause a Fund to lose proprietary information, suffer data corruption or lose operational capacity. Such events could cause a Fund to incur regulatory penalties, reputational damage, additional compliance costs associated with corrective measures and/or financial loss. These risks typically are not covered by insurance. In general, cyber incidents can result from deliberate attacks or unintentional events. Cyber incidents include, but are not limited to, gaining unauthorized access to digital systems (e.g., through "hacking" or malicious software coding) for purposes of misappropriating assets or sensitive information, corrupting data or causing operational disruption. Cyber attacks may also be carried out in a manner that does not require gaining unauthorized access, such as causing denial-of-service attacks on websites (i.e., efforts to make network services unavailable to intended users). Cyber security failures by or breaches of the systems of security issuers, the Advisor, distributor and other service providers (including, but not limited to, sub-advisors, index providers, fund accountants, custodians, transfer agents and administrators), market makers, Authorized Participants or the issuers of securities in which a Fund invests, have the ability to cause disruptions and impact business operations, potentially resulting in financial losses, interference with a Fund's ability to calculate its NAV, disclosure of confidential trading information, impediments to trading, submission of erroneous trades or erroneous creation or redemption orders, the inability of a Fund or its service providers to transact business, violations of applicable privacy and other laws, regulatory fines and other penalties, reputational damage, reimbursement or other compensation costs, or additional compliance costs. Substantial costs may be incurred by a Fund in order to resolve or prevent cyber incidents in the future. While the Funds have established business continuity plans in the event of, and risk management systems to prevent, such cyber attacks, there are inherent limitations in such plans and systems, including the possibility that certain risks have not been identified and that prevention and remediation efforts will not be successful. Furthermore, the Funds cannot control the cyber security plans and systems put in place by service providers to the Funds, issuers in which the Funds invest, Authorized Participants or market makers. There is no guarantee that such preventative efforts will succeed, and the Funds and their shareholders could be negatively impacted as a result.

Debt Securities Risk

The risks of investing in debt securities include (without limitation): (i) credit risk, e.g., the issuer or guarantor of a debt security may be unable or unwilling (or be perceived as unable or unwilling) to make timely principal and/or interest payments or otherwise honor its obligations; (ii) interest rate risk, e.g., when interest rates go up, the value of a debt security generally goes down, and when interest rates go down, the value of a debt security generally goes up; (iii) liquidity risk and valuation risk, e.g., debt securities generally do not trade on a securities exchange, making them generally less liquid and more difficult to value than common stock; (iv) call risk and income risk, e.g., during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce a Fund's income if the proceeds are reinvested at lower interest rates; and (v) extension risk, e.g., if interest rates rise, repayments of debt securities may occur more slowly than anticipated by the market, which may drive the prices of these securities down because their interest rates are lower than the current interest rate and the securities remain outstanding longer. Debt securities most frequently trade in institutional round lot size transactions. If a Fund purchases bonds in amounts less than the institutional

round lot size, which are frequently referred to as "odd" lots, the odd lot size positions may have more price volatility than institutional round lot size positions. A Fund uses a third-party pricing service to value bond holdings and the pricing service values bonds assuming orderly transactions of an institutional round lot size.

Derivatives Risk

Derivatives are investments whose value depends on (or is derived from) the value of an underlying instrument, such as a security, asset, reference rate or index and involve risks different from, and possibly greater than, the risks associated with other investments. These risks include: (i) the risk that the counterparty to a derivatives transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to, changing supply and demand relationships, government programs and policies, national and international political and economic events, changes in interest rates, inflation and deflation, and changes in supply and demand relationships. Unlike other investments, derivative contracts often have leverage inherent in their terms. This leverage creates a disconnect between the initial amount of an investment relative to the risk assumed and introduces the possibility that a relatively small movement in the value of an underlying reference asset can result in an immediate and substantial loss to a party to a derivative contract. The effects of leverage may also cause a Fund to liquidate portfolio positions when it would not be advantageous to do so. In general, the use of leveraged derivatives can magnify potential for gain or loss and, therefore, amplify the effects of market volatility on the Fund's Share price.

Emerging Markets Securities Risk

Securities of issuers based in countries with developing economies (emerging market countries) may present market, credit, currency, liquidity, legal, political and other risks different from, or greater than, the risks of investing in developed market countries and are generally considered speculative in nature. Emerging market countries are subject to greater market volatility, lower trading volume, political and economic instability, uncertainty regarding the existence of trading markets, rapid inflation, possible repatriation of investment income and capital, currency convertibility issues, less uniform accounting standards and more governmental limitations on foreign investment than more developed markets. Laws regarding foreign investment in emerging market securities, securities regulation, title to securities, and shareholder rights may change quickly and unpredictably. In addition, the enforcement of systems of taxation at federal, regional and local levels in emerging market countries may be inconsistent and subject to sudden change.

Equity Securities Risk

The value of equity securities held by a Fund may fall due to general market and economic conditions, perceptions regarding the industries in which the issuers of securities held by a Fund participate or factors relating to specific companies in which the Fund invests. For example, an adverse event, such as an unfavorable earnings report, may depress the value of equity securities of an issuer held by a Fund; the price of common stock of an issuer may be particularly sensitive to general movements in the stock market; or a drop in the stock market may depress the price of most or all of the common stocks and other equity securities held by a Fund. In addition, common stock of an issuer in a Fund's portfolio may decline in price if the issuer fails to make anticipated dividend payments because, among other reasons, the issuer of the security experiences a decline in its financial condition. Holders of an issuer's common stock may also be subject to greater risks than holders of its preferred stock and debt securities because common stockholders' claims are subordinated to those of holders of preferred stocks and debt securities upon the bankruptcy of an issuer.

Exchange Traded Products Risk

Unlike an investment in a mutual fund, the value of a Fund's investment in other exchange-traded funds or exchange-traded investment products ("ETPs") is based on its market price (rather than NAV) and the Fund could lose money due to premiums/discounts of the ETP (which could cause the Fund to buy shares at market prices that are higher than their value or sell shares at market prices that are lower than their value); the failure of an active trading market to develop; or exchange trading halts or delistings. An investment in a Fund will entail more costs and expenses than a direct investment in any underlying ETP. As a Fund's allocations to underlying ETPs changes, or the expense ratio of underlying ETPs change, the operating expenses borne by a Fund from such investments may increase or decrease. Federal law prohibits a Fund from acquiring investment company shares, including shares of other registered investment companies (including ETFs), in excess of specific thresholds unless exempted by rule, regulation or exemptive order. These prohibitions may prevent a Fund from allocating its investment in an optimal manner.

Focused Investment Risk

To the extent that a Fund invests a large percentage of its assets in a single asset class or the securities of issuers within the same country, group of countries, region, industry, group of industries or sector, an adverse economic, market, political or regulatory development may affect the value of the Fund's investments more than if the Fund were more broadly diversified. Different asset classes, countries, groups of countries, regions, industries, groups of industries or sectors tend to go through cycles of outperformance and underperformance in comparison to each other and to the general financial markets.

Foreign Securities Risk

Investments in the securities of non-U.S. issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Some countries and regions have experienced security concerns, war or threats of war and aggression, terrorism, economic uncertainty, natural and environmental disasters and/or systemic market dislocations that have led, and in the future may lead, to increased short-term market volatility and may have adverse long-term effects on the U.S. and world economies and markets generally. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, custody, financial reporting and record keeping than are U.S. issuers, and therefore not all material information will be available. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact a Fund's ability to invest in foreign securities or may prevent the Fund from repatriating its investments. Non-U.S. transaction costs, such as brokerage commissions and custody costs, may be higher than in the United States. In some non-U.S. markets, custody arrangements for securities provide significantly less protection than custody arrangements in U.S. markets. Prevailing clearing custody and trade settlement practices (e.g., the requirement to pay for securities prior to receipt) could similarly expose a Fund to credit and other risks it does not have in the United States with respect to participating brokers, custodians, clearing banks or other clearing agents, escrow agents and issuers. The less developed a country's securities market is, the greater the likelihood of clearing, custody and trade settlement problems. In addition, a Fund may not receive shareholder communications or be permitted to vote the securities it holds, as the issuers may be under no legal obligation to distribute them.

Foreign Securities Valuation Risk

A Fund's value may be impacted by events that cause the fair value of foreign securities to materially change between the close of the local exchange on which they trade and the time at which the Fund prices its Shares. Additionally, because foreign exchanges on which securities held by a Fund may be open on days when the Fund does not price its Shares, the potential exists for the value of the securities in the Fund's portfolio to change on days when shareholders will not be able to purchase or sell the Fund's Shares.

Futures Contracts Risk

Futures contracts are typically exchange-traded contracts that call for the future delivery of an asset by one party to another at a certain price and date, or cash settlement of the terms of the contract. The risk of a position in a futures contract may be very large compared to the relatively low level of margin a Fund is required to deposit. In many cases, a relatively small price movement in a futures contract may result in immediate and substantial loss or gain to the investor relative to the size of a required margin deposit. The ability to establish and close out positions in futures contracts is subject to the development and maintenance of a liquid secondary market. There is no assurance that a liquid secondary market on an exchange will exist for any particular futures contract at any particular time. If a Fund uses futures contracts for hedging purposes, there is a risk of imperfect correlation between movements in the prices of the derivatives and movements in the securities or index underlying the derivatives or movements in the prices of the Fund's investments that are the subject of such hedge. The prices of futures contracts, for a number of reasons, may not correlate perfectly with movements in the securities or index underlying them. For example, participants in the futures markets are subject to margin deposit requirements less onerous than margin requirements in the securities markets in general. As a result, futures markets may attract more speculators than the securities markets. Increased participation by speculators in those markets may cause temporary price distortions. Due to the possibility of price distortion, even a correct forecast of general market trends by a Fund's portfolio managers still may not result in successful derivatives activity over a very short time period. The Commodity Futures Trading Commission and the various exchanges have established limits referred to as "speculative position limits" on the maximum net long or net short positions that any person and certain affiliated entities may hold or control in a particular futures contract. It is possible that, as a result of such limits, a Fund will be precluded from taking positions in certain futures contracts it might have otherwise taken to the disadvantage of shareholders.

High-Yield Municipal Bond Risk

High-yield or non-investment grade municipal bonds (commonly referred to as "junk bonds") may be subject to increased liquidity risk as compared to other high-yield debt securities. There may be little or no active trading market for certain high-yield municipal bonds, which may make it difficult for a Fund to sell such bonds at or near their perceived value. In such cases, the value of a high-yield municipal bond may decline dramatically, even during periods of declining interest rates. The high-yield municipal bonds in which a Fund intends to invest may be more likely to pay interest that is includable in taxable income for purposes of the federal alternative minimum tax than other municipal bonds.

High Yield Securities Risk

A Fund's investment in high yield securities, or "junk" bonds, may entail increased credit risks and the risk that the value of the Fund's assets will decline, and may decline precipitously, with increases in interest rates. High yield securities are, under most circumstances, subject to greater market fluctuations and risk of loss of income and principal than are investments in lower-yielding, higher-rated debt securities. As interest rates rise, the value of high yield securities may decline precipitously. Increased rates may also indicate a slowdown in the economy, which may adversely affect the credit of issuers of high yield securities and result in a higher incidence of defaults among such issuers. A slowdown in the economy, or a development adversely affecting an issuer's creditworthiness, may result in the issuer being unable to maintain earnings or sell assets at the rate and at the prices, respectively, that are required to produce sufficient cash flow to meet its interest and principal requirements. Portfolio managers of a Fund cannot predict future economic policies or their consequences or, therefore, the course or extent of any similar market fluctuations in the future. In addition, high yield securities are generally less liquid than investment grade securities.

Income Risk

A Fund's income may decline when interest rates fall or if there are defaults in its portfolio. This decline can occur because a Fund may subsequently invest in lower-yielding securities when securities in its portfolio mature or the Fund otherwise needs to purchase additional securities.

Interest Rate Risk

An increase in interest rates may cause the value of certain fixed income securities held by a Fund to decline. Many factors can cause interest rates to rise, such as central bank monetary policies, inflation rates, general economic conditions and expectations about the foregoing. Fixed income securities with longer durations tend to be more sensitive to changes in interest rates, making them more volatile than securities with shorter durations or floating or adjustable interest rates. The negative impact on a Fund from potential interest rate increases could be swift and significant, including falling market values, increased redemptions and reduced liquidity. Substantial shareholder redemptions may worsen this impact. An increase in interest rates could also cause principal payments on a fixed income security to be repaid at a slower rate than expected. This risk is particularly prevalent for a callable debt security where an increase in interest rates could cause the issuer of that security to not redeem the security as anticipated on the call date, effectively lengthening the security's expected maturity, in turn making that security more vulnerable to interest rate risk and reducing its market value. A Fund may be subject to a greater risk of rising interest rates than would normally be the case due to the current period of historically low rates and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives.

When interest rates rise, certain obligations will be paid off by the issuer (or other obligated party) more slowly than anticipated, causing the value of these securities to fall. Rising interest rates tend to extend the duration of fixed income securities, making their market value more sensitive to changes in interest rates. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value. The value of securities with longer maturities generally changes more in response to changes in interest rates than does the value of securities with shorter maturities. Extension risk is particularly prevalent for a callable fixed income security where an increase in interest rates could result in the issuer of that security choosing not to redeem the security as anticipated on the security's call date. Such a decision by the issuer could have the effect of lengthening the security's expected maturity, making it more vulnerable to interest rate risk and reducing its market value.

Some securities may be redeemed at the option of the issuer, or "called," before their stated maturity date. In general, an issuer will call its debt securities if they can be refinanced by issuing new debt securities which bear a lower interest rate. A Fund is subject to the possibility that during periods of falling interest rates an issuer will call its high-yielding debt securities. A Fund may then be forced to invest the unanticipated proceeds in

securities with lower yields, resulting in a decline in the Fund's income, or in securities with greater risks or with other less favorable features. Such redemptions and subsequent reinvestments would also increase a Fund's portfolio turnover. If a called debt security was purchased by a Fund at a premium, the value of the premium may be lost in the event of a redemption.

Investment Style Risk

A Fund seeks to allocate investment exposure based upon a particular style of investing. Different investment styles tend to shift in and out of favor depending upon market and economic conditions and investor sentiment. As a consequence, a Fund may underperform as compared to the market generally or to other funds that invest in similar asset classes but employ different investment styles. Further, there is no guarantee that a Fund will accurately or optimally utilize the investment style or that it will successfully provide the desired investment exposure.

- *ESG Investing Style Risk.* A Fund seeks exposure to the securities of companies meeting environmental, social and corporate governance investing criteria. A Fund excludes or limits exposure to securities of certain issuers for non-financial reasons, and the Fund may forgo some market opportunities available to funds that do not use these criteria. The application of ESG investing criteria may affect a Fund's exposure to certain sectors or types of investments and may impact the Fund's relative investment performance depending on whether such sectors or investments are in or out of favor in the market. ESG investing is subjective by nature, and therefore offers no guarantee that the ESG criteria utilized by the Subadvisor will accurately provide exposure to issuers meeting environmental, social and corporate governance criteria or any judgment exercised by the Subadvisor will reflect the beliefs or values of any particular investor. In addition, ESG investing is dependent upon information and data that may be incomplete, inaccurate or unavailable, which could adversely affect the analysis of the factors relevant to a particular investment.

Issuer Risk

The performance of a Fund depends on the performance of individual securities to which the Fund has exposure. Any issuer of these securities may perform poorly, causing the value of its securities to decline. Poor performance may be caused by poor management decisions, competitive pressures, changes in technology, expiration of patent protection, disruptions in supply, labor problems or shortages, corporate restructurings, fraudulent disclosures, credit deterioration of the issuer or other factors. Issuers may, in times of distress or at their own discretion, decide to reduce or eliminate dividends, which may also cause their stock prices to decline. An issuer may also be subject to risks associated with the countries, states and regions in which the issuer resides, invests, sells products or otherwise conducts operations.

Large Investments Risk

From time to time, a Fund may receive large purchase or redemption orders from affiliated or unaffiliated funds or other investors. In addition, any third-party investor, investment advisor affiliate, authorized participant, lead market maker or other entity may make a large investment in a Fund and hold its investment for any number of reasons, including to facilitate such Fund's commencement of operations or to facilitate the Fund's achieving a specified size or scale. There can be no assurance that any large shareholder would not sell or redeem its investment at any given time, either in a single transaction or over time. These large transactions, and particularly redemptions, could have adverse effects on a Fund, including: (i) negative impacts to performance if the Fund were required to sell securities, invest cash or hold significant cash at times when it otherwise would not do so; (ii) wider price spreads or greater premiums/discounts that could materialize as a result of lower secondary market volume of shares; and (iii) negative federal income tax consequences if this activity accelerated the realization of capital gains.

LIBOR Replacement Risk

A Fund may invest in certain debt securities, derivatives or other financial instruments that utilize floating rates, such as the London Interbank Offered Rate ("LIBOR"), as a "benchmark" or "reference rate" for various interest rate calculations. In 2017, the United Kingdom Financial Conduct Authority announced its intention to cease compelling banks to provide the quotations needed to sustain LIBOR after 2021. ICE Benchmark Administration, the administrator of LIBOR, ceased publication of most LIBOR settings on a representative basis at the end of 2021 and ceased publication of a majority of U.S. dollar LIBOR settings on a representative basis on June 30, 2023.

Actions by regulators have resulted in the establishment of alternative reference rates to LIBOR in most major currencies (e.g., European Interbank Offer Rate ("EURIBOR"), Sterling Overnight Interbank Average Rate

("SONIA") and Secured Overnight Financing Rate ("SOFR"). Various financial industry groups have been planning for the discontinuation of LIBOR and markets have been developing in response to these new rates, but questions around the liquidity of the new rates and how to appropriately adjust these rates to eliminate any economic value transfer at the time of transition remain a significant concern. There are challenges to converting certain contracts and transactions to a new benchmark and neither the full effects of the discontinuation nor its ultimate outcome is fully known.

Uncertainty and risk also remain regarding the willingness and ability of issuers and lenders to include revised provisions in new and existing contracts or instruments. Consequently, the transition from LIBOR to other reference rates may lead to increased volatility and illiquidity in markets that were tied to LIBOR, fluctuations in values of LIBOR-related investments or investments in issuers that utilized LIBOR, increased difficulty in borrowing or refinancing and diminished effectiveness of hedging strategies, adversely affecting a Fund's performance.

The elimination of LIBOR or changes to other reference rates or any other changes or reforms to the determination or supervision of reference rates could have an adverse impact on the market for, or value of, any securities or payments linked to those reference rates, which may adversely affect a Fund's performance and/or net asset value.

While the transition away from LIBOR is nearly complete with no material adverse effect to the Funds' performance, it is difficult to predict the full impact of the discontinuation of LIBOR on a Fund.

Liquidity Risk

Liquidity risk exists when particular investments are difficult to purchase or sell. To the extent a Fund invests in illiquid securities or securities that become less liquid, such investments may have a negative effect on the returns of the Fund because the Fund may be unable to sell the illiquid securities at an advantageous time or price. Securities with substantial market and/or credit risk may be especially susceptible to liquidity risk. Liquidity risk may be the result of, among other things, an investment being subject to restrictions on resale, trading over-the-counter or in limited volume, or lacking an active trading market. Liquid investments may become illiquid or less liquid after purchase by a Fund, particularly during periods of market turmoil or economic uncertainty. Illiquid and relatively less liquid investments may be harder to value, especially in changing markets. If a Fund is forced to sell underlying investments at reduced prices or under unfavorable conditions to meet redemption requests or for other cash needs, the Fund may suffer a loss. This may be magnified in a rising interest rate environment or under other circumstances where redemptions from a Fund may be higher than normal. It may also be the case that other market participants may be attempting to liquidate similar holdings at the same time as a Fund, causing increased supply in the market and contributing to liquidity risk and downward pricing pressure. There can be no assurance that a security that is deemed to be liquid when purchased will continue to be liquid or as long as it is held by a Fund.

Market Disruption Risk and Recent Market Events

Geopolitical and other events, including war, terrorism, economic uncertainty, trade disputes, public health crises (such as the spread of infectious diseases, pandemics and epidemics) and related geopolitical events have led, and in the future may lead, to disruptions in the US and world economies and markets, which may increase financial market volatility and have significant adverse direct or indirect effects on a Fund and its investments. For example, pandemic spread of the novel coronavirus disease known as COVID-19 and the ensuing policies enacted by governments and central banks caused significant volatility and great uncertainty in global financial markets, negatively impacting global growth prospects. Market disruptions such as these could cause a Fund to lose money, experience significant redemptions, and encounter operational difficulties. Although multiple asset classes may be affected by a market disruption, the duration and effects may not be the same for all types of assets.

Market Risk

The value of a Fund's investments may fluctuate and/or decline because of changes in the markets in which a Fund invests, which could cause the Fund to underperform other funds with similar investment objectives and strategies. Security markets are volatile and may decline significantly in response to adverse issuer, regulatory, political, or economic developments. Different sectors of the market and different security types may react differently to such developments. Changes in these markets may be rapid and unpredictable. Fluctuations in the markets generally or in a specific industry or sector may impact the securities in which a Fund invests. From time to time, markets may experience periods of stress for potentially prolonged periods that may result in: (i) increased market volatility; (ii) reduced market liquidity; and (iii) increased redemptions of Fund shares. Such

conditions may add significantly to the risk of volatility in the net asset value of a Fund's shares and the market prices at which shares of a Fund trade on a securities exchange. During periods of market stress shares of a Fund may also experience significantly wider "bid/ask" spreads and premiums and discounts between a Fund's net asset value and market price.

Market changes may impact equity and fixed income securities in different and, at times, conflicting manners. A Fund potentially will be prevented from executing investment decisions at an advantageous time or price as a result of any domestic or global market disruptions, particularly disruptions causing heightened market volatility and reduced market liquidity, as well as increased or changing regulations or market closures. Thus, investments that the Subadvisor believes represent an attractive opportunity or in which a Fund seeks to obtain exposure may be unavailable entirely or in the specific quantities sought by the Subadvisor and a Fund may need to obtain the exposure through less advantageous or indirect investments or forgo the investment at the time. Securities and investments held by a Fund may be susceptible to declines in value, including declines in value that are not believed to be representative of the issuer's value or fundamentals, due to investor reactions to such events.

Political and diplomatic events within the United States and abroad, such as the U.S. budget and deficit reduction plans, protectionist measures, trade tensions central bank policy and government intervention in the economy, has in the past resulted, and may in the future result, in developments that present additional risks to a Fund's investments and operations. Geopolitical and other events, such as war, acts of terrorism, natural disasters, the spread of infectious illnesses, epidemics and pandemics, environmental and other public health issues, recessions or other events, and governments' reactions to such events, may lead to increased market volatility and instability in world economies and markets generally and may have adverse effects on the performance of a Fund and its investments. Additional and/or prolonged geopolitical or other events may affect investor and consumer confidence and may adversely impact financial markets and the broader economy, perhaps suddenly and to a significant degree. Any such market, economic and other disruptions could also prevent a Fund from executing its investment strategies and processes in a timely manner.

An investment in a Fund is not a deposit in a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. When you sell your Shares, they could be worth less than what you paid for them.

Money Market/Short-Term Securities Risk

To the extent that a Fund invests in money market or short-term securities, a Fund may be subject to certain risks associated with such investments. An investment in a money market fund or short-term securities is not a bank deposit and is not insured or guaranteed by any bank, the Federal Deposit Insurance Corporation or any other government agency. It is possible for a Fund to lose money by investing in money market funds. A money market fund may not achieve its investment objective. Changes in government regulations may affect the value of an investment in a money market fund.

Municipal Bond Market Liquidity Risk

Inventories of municipal bonds held by brokers and dealers may decrease, lessening their ability to make a market in these securities. Any reduction in market-making capacity has the potential to decrease a Fund's ability to buy or sell municipal bonds and increase price volatility and trading costs, particularly during periods of economic or market stress. In addition, federal banking regulations may cause certain dealers to reduce their inventories of municipal bonds, which may further decrease a Fund's ability to buy or sell municipal bonds. As a result, a Fund may be forced to accept a lower price to sell a municipal security, to sell other securities to raise cash, or to give up an investment opportunity, any of which could have a negative effect on performance. The market for unrated municipal securities may be less liquid than the market for rated municipal bonds of comparable quality. Decreased liquidity may negatively affect a Fund's ability to mitigate risk and meet redemptions. Also, less public information is typically available about unrated municipal bonds or their issuers, which can affect the liquidity of the market.

Municipal Bond Risk

The values of municipal bonds may be adversely affected by local political and economic conditions and developments. Adverse conditions in an industry significant to a local economy could have a correspondingly adverse effect on the financial condition of local issuers. Other factors that could affect municipal bonds include a change in the local, state, or national economy, demographic factors, ecological or environmental concerns, statutory limitations on the issuer's ability to increase taxes, and other developments generally

affecting the revenue of issuers (for example, legislation or court decisions reducing state aid to local governments or mandating additional services). This risk would be heightened to the extent that a Fund invests a substantial portion of its assets in bonds issued pursuant to similar projects (such as those relating to the education, health care, housing, transportation, or utilities industries), in industrial development bonds, or in particular types of municipal securities (such as general obligation bonds, private activity bonds or moral obligation bonds) that are particularly exposed to specific types of adverse economic, business or political events. Changes in a municipality's financial health may also make it difficult for the municipality to make interest and principal payments when due. The values of municipal bonds that depend on a specific revenue source to fund their payment obligations may fluctuate as a result of actual or anticipated changes in the cash flows generated by the revenue source or changes in the priority of the municipal obligation to receive the cash flows generated by the revenue source. Under some circumstances, municipal securities might not pay interest unless the state legislature or municipality authorizes money for that purpose. Municipal bonds may be more susceptible to downgrades or defaults during recessions or similar periods of economic stress. In addition, since some municipal securities may be secured or guaranteed by banks and other institutions, the risk to a Fund could increase if the banking or financials sector suffers an economic downturn and/or if the credit ratings of the institutions issuing the guarantee are downgraded or at risk of being downgraded by a national rating organization. Such a downward revision or risk of being downgraded may have an adverse effect on the market prices of the bonds and thus the value of a Fund's investments. In addition to being downgraded, an insolvent municipality may file for bankruptcy. The reorganization of a municipality's debts may significantly affect the rights of creditors and the value of the securities issued by the municipality and the value of a Fund's investments. In addition, income from municipal bonds held by a Fund could be declared taxable because of, among other things, unfavorable changes in tax laws, adverse interpretations by the Internal Revenue Service or state tax authorities, or noncompliant conduct of an issuer or other obligated party. Loss of tax-exempt status may cause interest received and distributed to shareholders by a Fund to be taxable and may result in a significant decline in the values of such municipal bonds. There are various different types of municipal bonds, each with its own unique risk profile. Some of these risks include:

- *General Obligation Bonds Risk* — timely payments depend on the issuer's credit quality, ability to raise tax revenues and ability to maintain an adequate tax base;
- *Revenue Bonds (including Industrial Development Bonds) Risk* — timely payments depend on the money earned by the particular facility or class of facilities, or the amount of revenues derived from another source, and may be negatively impacted by the general credit of the user of the facility;
- *Private Activity Bonds Risk* — municipalities and other public authorities issue private activity bonds to finance development of industrial facilities for use by a private enterprise, which is solely responsible for paying the principal and interest on the bonds, and payment under these bonds depends on the private enterprise's ability to do so;
- *Moral Obligation Bonds Risk* — moral obligation bonds are generally issued by special purpose public authorities of a state or municipality. If the issuer is unable to meet its obligations, repayment of these bonds becomes a moral commitment, but not a legal obligation, of the state or municipality;
- *Municipal Notes Risk* — municipal notes are shorter-term municipal debt obligations that pay interest that is, in the opinion of bond counsel for the issuer at the time of issuance, generally excludable from gross income for federal income tax purposes (except that the interest may be includable in taxable income for purposes of the federal alternative minimum tax) and that have a maturity that is generally one year or less. If there is a shortfall in the anticipated proceeds, the notes may not be fully repaid and a Fund may lose money; and
- *Municipal Lease Obligations Risk* — in a municipal lease obligation, the issuer agrees to make payments when due on the lease obligation. Although the issuer does not pledge its unlimited taxing power for payment of the lease obligation, the lease obligation is secured by the leased property.

Municipal Insurance Risk

A Fund's investments may include investments in insured municipal bonds. Municipal security insurance does not guarantee the value either of individual municipal securities or of Shares of a Fund. In addition, a municipal security insurance policy generally will not cover: (i) repayment of a municipal security before maturity (redemption), (ii) prepayment or payment of an acceleration premium (except for a mandatory sinking fund redemption) or any other provision of a bond indenture that advances the maturity of the bond or

(iii) non-payment of principal or interest caused by negligence or bankruptcy of the paying agent. A mandatory sinking fund redemption may be a provision of a municipal security issue whereby part of the municipal security issue may be retired before maturity. Market conditions or changes to ratings criteria could adversely impact the ratings of municipal bond insurance companies. Downgrades and withdrawal of ratings from municipal bond insurers have substantially limited the availability of insurance sought by municipal bonds issuers, thereby reducing the supply of insured municipal bonds that meet a Fund's investment guidelines or the ability of a Fund to purchase insurance on municipal bonds held by the Fund. A rating downgrade of a municipal bond insurer could negatively impact the market value of insured municipal bonds held by a Fund. If the insurer of a defaulted municipal bond were to become unable or unwilling to pay the principal or interest on the defaulted municipal bond, a Fund would incur losses. Because of the consolidation among insurers of municipal securities, to the extent that a Fund invests in insured municipal bonds, it is subject to the risk that credit risk may be concentrated among fewer insurers and the risk that events involving one or more insurers could have a significant adverse effect on the value of the securities insured by an insurer and on the municipal markets as a whole.

Operational Risk

Each Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. A Fund, Advisor and Subadvisor seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address significant operational risks.

Option Contracts Risk

The use of option contracts involves investment strategies and risks different from those associated with ordinary portfolio securities transactions. The prices of option contracts are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, changes in interest or currency exchange rates, including the anticipated volatility, which are affected by fiscal and monetary policies and by national and international political, changes in the actual or implied volatility or the reference asset, the time remaining until the expiration of the option contract and economic events. There may at times be an imperfect correlation between the movement in values option contracts and the reference asset, and there may at times not be a liquid secondary market for certain option contracts. Option contracts may also involve the use of leverage, which could result in greater price volatility than other markets.

Portfolio Management Risk

Each Fund is subject to portfolio management risk because it is an actively managed portfolio. In managing a Fund's investment portfolio, the portfolio managers will apply investment techniques and risk analyses that may not produce the desired result. There can be no guarantee that a Fund will meet its investment objective(s). In addition, a Fund may not achieve its investment objective if the portfolio managers take temporary positions in response to unusual or adverse market, economic or political conditions, or other unusual or abnormal circumstances.

To the extent a Subadvisor gives consideration to certain ESG criteria when evaluating an investment opportunity. The application of ESG criteria may result in a Fund (i) having exposure to certain securities or industry sectors that are significantly different than the composition of the Fund's benchmark; and (ii) performing differently than other funds and strategies in its peer group that do not take into account ESG criteria or the Fund's benchmark. The investments selected by a Fund's portfolio managers may underperform the market or other investments.

Portfolio Turnover Risk

A Fund's strategy may frequently involve buying and selling portfolio securities to rebalance its investment exposures. High portfolio turnover may result in a Fund paying higher levels of transaction costs and generating greater tax liabilities for shareholders. Portfolio turnover risk may cause a Fund's performance to be less than expected.

Preferred Securities Risk

Preferred securities combine some of the characteristics of both common stocks and bonds. Preferred securities are typically subordinated to bonds and other debt securities in a company's capital structure in terms of priority to corporate income, subjecting them to greater credit risk than those debt securities. Preferred securities often include provisions that permit the issuer, at its discretion, to defer distributions for a stated period

without any adverse consequences to the issuer. If a Fund owns a preferred security that is deferring its distributions, the Fund may be required to report income for federal income tax purposes although it has not yet received such income in cash. Generally, holders of preferred securities have no voting rights with respect to the issuing company unless preferred dividends have been in arrears for a specified number of periods, at which time the preferred security holders may elect a number of directors to the issuer's board of director. Generally, once the issuer pays all the arrearages, the preferred security holders no longer have voting rights. In certain circumstances, an issuer of preferred securities may redeem the securities prior to a specified date. For instance, for certain types of preferred securities, a redemption may be triggered by a change in federal income tax or securities laws or a change in regulatory trademark. As with redemption provisions of debt securities, a special redemption by the issuer may negatively impact the return of the preferred security held by a Fund. Preferred securities may also be substantially less liquid than other securities, including common stock.

Private Placement and Restricted Securities Risk

A Fund may invest in privately issued securities, including those which may be resold only in accordance with Rule 144A under the Securities Act of 1933, as amended. Securities acquired in a private placement generally are subject to strict restrictions on resale, and there may be no market or a limited market for the resale of such securities. Therefore, a Fund may be unable to dispose of such securities when it desires to do so or at the most favorable price. This potential lack of liquidity also may make it more difficult to accurately value these securities.

Repurchase Agreement Risk

Repurchase agreements are subject to counterparty risks, including the risk that the seller of the underlying security will become bankrupt or insolvent before the date of repurchase or otherwise will fail to repurchase the security as agreed, which could cause losses to a Fund. If the seller defaults on its obligations under the agreement, a Fund may incur costs, lose money or suffer delays in exercising its rights under the agreement. If the seller fails to repurchase the underlying instruments collateralizing the repurchase agreement, a Fund may lose money. The credit, liquidity and other risks associated with repurchase agreements are heightened when a repurchase agreement is secured by collateral other than cash or U.S. government securities.

Risks of Investing in Loans

Investments in loans are subject to the same risks as investments in other types of debt securities, including credit risk, interest rate risk, liquidity risk and valuation risk that may be heightened because of the limited public information available regarding loans and because loan borrowers may be leveraged and tend to be more adversely affected by changes in market or economic conditions. Default in the payment of interest or principal on a loan will result in a reduction in the value of the loan and consequently a reduction in the value of an investment in that loan. If an investor holds a loan through another financial institution or relies on a financial institution to administer the loan, its receipt of principal and interest on the loan may be subject to the credit risk of that financial institution. It is possible that any collateral securing a loan may be insufficient or unavailable to the investor, and that the investor's rights to collateral may be limited by bankruptcy or insolvency laws. Additionally, there is no central clearinghouse for loan trades and the loan market has not established enforceable settlement standards or remedies for failure to settle. Consequently, the secondary market for loans may be subject to irregular trading activity, wide bid/ask spreads and extended trade settlement periods (in some cases longer than 7 days), which may cause an investor to be unable to realize the full value of its investment. In addition, loans are generally not registered with the SEC under the Securities Act of 1933, as amended, and may not be considered "securities," and an investor may not be entitled to rely on the anti-fraud protections of the federal securities laws. An investment in loans made to non-U.S. borrowers may be affected by political and social instability, changes in economic or taxation policies, difficulties in enforcing obligations, decreased liquidity and increased volatility. Foreign borrowers may be subject to less regulation, resulting in less publicly available information about the borrowers.

The loan market has seen a significant increase in loans with weaker lender protections including, but not limited to, limited financial maintenance covenants or, in some cases, no financial maintenance covenants (i.e., "covenant-lite loans") that would typically be included in a traditional loan agreement and general weakening of other restrictive covenants applicable to the borrower such as limitations on incurrence of additional debt, restrictions on payments of junior debt or restrictions on dividends and distributions. Weaker lender protections such as the absence of financial maintenance covenants in a loan agreement and the inclusion of "borrower-favorable" terms may impact recovery values and/or trading levels of loans in the future. The absence of financial maintenance covenants in a loan agreement generally means that the lender may

not be able to declare a default if financial performance deteriorates. This may hinder an investor's ability to reprice credit risk associated with a particular borrower and reduce the investor's ability to restructure a problematic loan and mitigate potential loss. As a result, an investor's exposure to losses on investments in loans may be increased, especially during a downturn in the credit cycle or changes in market or economic conditions.

Risks of Loan Assignments and Participations

The purchaser of an assignment typically succeeds to all the rights and obligations of the assigning institution and becomes a lender under the credit agreement with respect to the debt obligation; however, the purchaser of an assignment may not be able to unilaterally enforce all rights and remedies under the loan and with regard to any associated collateral. Because assignments may be arranged through private negotiations between potential assignees and potential assignors, the rights and obligations acquired by the purchaser of an assignment may differ from, and be more limited than, those held by the assigning lender. In addition, if the loan is foreclosed, the purchaser of an assignment could become part owner of any collateral and could bear the costs and liabilities of owning and disposing of the collateral. To the extent an investor sells a loan by way of assignment, the investor may be required to pass along a portion of any fees to which the investor was entitled under the loan. In connection with purchasing participations, such purchaser generally will have no right to enforce compliance by the borrower with the terms of the loan agreement relating to the loan, nor any rights of set-off against the borrower, and the purchaser may not directly benefit from any collateral supporting the loan in which it has purchased the participation. As a result, the purchaser will be subject to the credit risk of both the borrower and the lender that is selling the participation. In the event of the insolvency of the lender selling a participation, the purchaser may be treated as a general creditor of the lender and may not benefit from any set-off between the lender and the borrower.

Secondary Market Trading Risk

Although a Fund's Shares are listed for trading on one or more securities exchanges, there can be no assurance that an active trading market for such Shares will develop or be maintained by market makers or Authorized Participants. The trading of Shares on securities exchanges is subject to the risk of irregular trading activity. Securities exchanges have requirements that must be met in order for Shares to be listed. There can be no assurance that the requirements of an exchange necessary to maintain the listing of Shares will continue to be met. This risk is particularly acute for funds that fail to attract a large number of shareholders. Pursuant to an exchange's "circuit breaker" rules, trading in a Fund's Shares may be halted due to extraordinary market volatility. Additionally, market makers are under no obligation to make a market in a Fund's Shares and Authorized Participants are not obligated to submit purchase or redemption orders for Creation Units. In the event market makers cease making a market in a Fund's Shares or Authorized Participants stop submitting purchase or redemption orders for Creation Units, such Fund's Shares may trade at a larger premium or discount to its NAV.

Short Sales Risk

In order to achieve its investment objective, a Fund may engage in short sales, which are designed to provide the Fund gains when the price of a particular security, basket of securities or index declines. When a Fund shorts a security, it borrows shares of that security, which it then sells. A Fund closes out a short sale by purchasing the security that it has sold short and returning that security to the entity that lent the security. A Fund may also seek inverse or "short" exposure through the use of derivatives such as swap agreements or futures contracts, which will expose the Fund to certain risks such as an increase in volatility or decrease in the liquidity of the securities of the underlying short position. A short position subjects a Fund to the risk that instead of declining, the price of the security or reference asset to which the Fund has short exposure will rise. If the price of the security or reference asset increases between the date of the short sale and the date on which a Fund replaces the security or otherwise closes out its short position, the Fund will experience a loss, which is theoretically unlimited since there is a theoretically unlimited potential for the market price of a security or other instrument sold short to increase.

Swap Agreements Risk

Swap agreements are two-party contracts entered into for a set period of time in which the parties agree to exchange payments based on some underlying reference or asset (such as interest rates). The use of swaps is a highly specialized activity that involves investment techniques, risk analyses and tax planning different from those associated with ordinary portfolio securities transactions. These transactions can result in sizeable realized and unrealized capital gains and losses relative to the gains and losses from a Fund's direct investments in the reference assets. Transactions in swaps can involve greater risks than if the Fund had invested directly in the

reference asset since, in addition to general market risks, swaps may be leveraged and are also subject to credit risk, counterparty risk, liquidity risk and valuation risk. Because they are two-party contracts and may have terms of greater than seven days, certain swap transactions may be considered illiquid. Moreover, a Fund bears the risk of loss of the amount expected to be received under a swap agreement in the event of the default or bankruptcy of a swap counterparty. Some swaps may be complex and difficult to value. Swaps may also be subject to pricing or "basis" risk, which exists when a particular swap becomes extraordinarily expensive relative to historical prices or the price of corresponding cash market instruments. Under certain market conditions it may not be economically feasible to initiate a transaction or liquidate a position in time to avoid a loss or take advantage of an opportunity. If a swap transaction is particularly large or if the relevant market is illiquid, it may not be possible to initiate a transaction or liquidate a position at an advantageous time or price, which may result in significant losses. The prices of swaps can be very volatile, and a variance in the degree of volatility or in the direction of the price of the reference asset from the portfolio managers' expectations may produce significant losses in a Fund's investments in swaps. In addition, a perfect correlation between a swap and an investment position may be impossible to achieve. As a result, a Fund's use of swaps may not be effective in fulfilling the Fund's investment strategies and may contribute to losses that would not have been incurred otherwise. Certain swaps are not bilateral agreements but are centrally cleared and are exchange-traded. Central clearing tends to decrease credit risk and improve liquidity but many regulations regarding centrally cleared swaps have not been fully implemented and the scope of the risks remain unclear. As central clearing does not make the agreements risk-free and there is no guarantee that a Fund would consider all centrally cleared or exchange-traded swaps to be liquid.

Trading Price Risk

Although it is generally expected that the market price of the Fund's Shares will approximate the Fund's NAV, there may be times when the market price and the NAV vary significantly. Shares of the Fund trade on securities exchanges at prices at, above or below the Fund's most recent NAV. The NAV of the Fund is calculated at the end of each business day and fluctuates with changes in the market value of the Fund's holdings. The trading price of the Fund's Shares fluctuates continuously throughout trading hours based on market supply of and demand for Shares and the Fund's NAV, among other reasons. As a result, the trading prices of the Fund's Shares may deviate significantly from NAV during periods of market volatility. The market price of the Fund's Shares during the trading day, like the price of any exchange-traded security, includes a "bid/ask" spread charged by market makers or other participants that trade the Shares. In times of severe market disruption, the bid/ask spread can increase significantly. At those times, Shares are most likely to be traded at a discount to NAV, and the discount is likely to be greatest when the price of Shares is falling fastest, which may be the time that an investor most wants to sell their Shares. The risk of wide bid and ask spreads may be especially pronounced for smaller funds. In addition, increased market volatility may cause wider spreads.

U.S. Tax Risk

To qualify for the favorable U.S. federal income tax treatment accorded to regulated investment companies, a Fund must satisfy certain income, asset diversification and distribution requirements. If for any taxable year, a Fund does not qualify as a regulated investment company, all of its taxable income (including its net capital gain) for that year would be subject to tax at regular corporate rates without any deduction for distributions to its shareholders, and the Fund's distributions, including distributions of tax-exempt income, would be taxable to its shareholders as dividend income to the extent of a Fund's current and accumulated earnings and profits. To the extent a Fund engages in derivatives transactions, the tax treatment such derivatives transactions is unclear for purposes of determining a Fund's tax status. To the extent a Fund engages in transactions in financial instruments, including, but not limited to, options, futures contracts, hedging transactions, forward contracts and swap contracts, the Fund will be subject to special tax rules (which may include mark-to-market, constructive sale, wash sale and short sale rules), the effect of which may be to accelerate income to the Fund, defer losses to the Fund, cause adjustments in the holding periods of the Fund's securities, convert long-term capital gains into short-term capital gains or convert short-term capital losses into long-term capital losses. These rules could, therefore, affect the amount, timing and character of distributions to a Fund's shareholders. A Fund's use of such transactions may result in the Fund realizing more short-term capital gains and ordinary income, in each case subject to U.S. federal income tax at higher ordinary income tax rates, than it would if it did not engage in such transactions.

Valuation Risk

When valuing a Fund's portfolio investments, if a market quotation is readily available for a portfolio investment, that investment will generally be valued at the market value. However, unlike publicly traded securities that trade on national securities exchanges, there is no central place or exchange for trading most debt securities

and thus readily available market quotations are unavailable. Debt securities generally trade on an "over-the-counter" market. Due to the lack of centralized information and trading, and variations in lot sizes of certain debt securities, the valuation of debt securities may carry more uncertainty and risk than that of publicly traded securities. Debt securities are commonly valued by third-party pricing service providers that utilize a range of market-based inputs and assumptions, including readily available market quotations obtained from broker-dealers making markets in such securities, cash flows and transactions for comparable instruments. However, because the available information is less reliable and more subjective, elements of judgment may play a greater role in valuation of debt securities than for other types of securities. Additionally, pricing service providers generally price debt securities assuming orderly transactions of an institutional "round lot" size, but some trades may occur in smaller, "odd lot" sizes, often at lower prices than institutional round lot trades. Valuing a Fund's investments using fair value pricing provided by pricing service providers will result in prices that may differ from current market valuations and that may not be the prices at which those investments could have been sold during the period in which the particular fair values were used. It is possible that the fair value determined for a portfolio instrument may be materially different from the value that could be realized upon the sale of that instrument. Authorized Participants who purchase or redeem Shares on days when the a Fund is holding fair-valued securities may receive fewer or more shares, or lower or higher redemption proceeds, than they would have received had the Fund not fair-valued securities or used a different valuation methodology. The A Fund's ability to value investments may be impacted by technological issues or errors by pricing services or other third-party service providers.

Variable and Floating Rate Instruments Risk

Variable and floating rate instruments include debt securities issued by corporate and governmental entities, bank loans, mortgage-backed securities and asset-backed securities, preferred equity securities and derivative variable rate securities, such as inverse floaters. Variable and floating rate instruments are structured so that the instrument's coupon rate fluctuates based upon the level of a reference rate. Most commonly, the coupon rate of a variable or floating rate instrument is set at the level of a widely followed interest rate, plus a fixed spread. As a result, the coupon on a variable or floating rate instrument will generally decline in a falling interest rate environment, causing a Fund to experience a reduction in the income it receives from the instrument. A variable or floating rate instrument's coupon rate resets periodically according to its terms. Consequently, in a rising interest rate environment, variable and floating rate instruments with coupon rates that reset infrequently may lag behind the changes in market interest rates. Variable and floating rate instruments may also contain terms that impose a maximum coupon rate the issuer will pay, regardless of the level of the reference rate.

Zero Coupon Securities Risk

Zero coupon securities do not pay interest on a current basis. The interest earned on zero coupon securities is, implicitly, automatically compounded and paid out at maturity. While such compounding at a constant rate eliminates the risk of receiving lower yields upon reinvestment of interest if prevailing interest rates decline, the owner of a zero coupon security will be unable to participate in higher yields upon reinvestment of interest received if prevailing interest rates rise. For this reason, zero coupon securities are subject to substantially greater market price fluctuations during periods of changing prevailing interest rates than are comparable securities that make current distributions of interest. Current federal tax law requires that a holder of a zero coupon security accrue a portion of the discount at which the security was purchased as income each year even though a Fund receives no interest payments in cash on the security during the year.

Buying and Selling Shares in the Secondary Market

Most investors will buy and sell Shares of each Fund in secondary market ("Secondary Market") transactions through brokers. Shares of each Fund will be listed for trading on the Secondary Market on the NYSE Arca. Shares can be bought and sold throughout the trading day like other publicly-traded shares. Unless imposed by your broker or dealer, there is no minimum dollar amount you must invest and no minimum number of Shares you must buy in the Secondary Market. When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offered price in the Secondary Market on each leg of a round trip (purchase and sale) transaction. In addition, because transactions in the Secondary Market occur at market prices, you may pay more than NAV when you buy Shares and receive less than NAV when you sell those Shares.

Share prices are reported in dollars and cents per Share. For information about buying and selling Shares in the Secondary Market, please contact your broker or dealer.

Book Entry

Shares of each Fund are held in book-entry form and no stock certificates are issued. DTC, through its nominee Cede & Co., is the record owner of all outstanding Shares.

Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. Participants in DTC include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely upon the procedures of DTC and its participants.

These procedures are the same as those that apply to any securities that you hold in book entry or "street name" form for any publicly-traded company. Specifically, in the case of a shareholder meeting of a Fund, DTC assigns applicable Cede & Co. voting rights to its participants that have Shares credited to their accounts on the record date, issues an omnibus proxy and forwards the omnibus proxy to the Fund. The omnibus proxy transfers the voting authority from Cede & Co. to the DTC participant. This gives the DTC participant through whom you own Shares (namely, your broker, dealer, bank, trust company or other nominee) authority to vote the shares, and, in turn, the DTC participant is obligated to follow the voting instructions you provide.

Management

The Board is responsible for the general supervision of the Funds. The Board appoints officers who are responsible for the day-to-day operations of the Funds.

Investment Advisor

The Advisor has been registered as an investment advisor with the SEC since August 2007 and is a wholly-owned indirect subsidiary of New York Life Insurance Company. The Advisor's principal office is located at 51 Madison Avenue, New York, New York 10010. As of June 30, 2023, the Advisor had approximately \$9.93 billion in assets under management.

The Advisor has overall responsibility for the general management and administration of the Trust. The Advisor provides an investment program for the Funds. The Advisor has delegated certain advisory duties with regard to the Funds (including management of all of the Fund's assets) to each Fund's subadvisor. The Advisor has also arranged for custody, fund administration, transfer agency and all other non-distribution related services necessary for the Funds to operate.

As compensation for its services and its assumption of certain expenses, each Fund pays the Advisor a management fee equal to a percentage of a Fund's average daily net assets that is calculated daily and paid monthly, as follows:

<u>Fund Name</u>	<u>Management Fee</u>
IQ Ultra Short Duration ETF	0.24%
IQ MacKay ESG Core Plus Bond ETF	0.39%
IQ MacKay ESG High Income ETF	0.40%
IQ MacKay Multi-Sector Income ETF	0.40%
IQ MacKay Municipal Insured ETF	0.40%
IQ MacKay Municipal Intermediate ETF	0.40%
IQ MacKay California Municipal Intermediate ETF	0.45%

The Advisor may voluntarily waive any portion of its advisory fee from time to time, and may discontinue or modify any such voluntary limitations in the future at its discretion.

The Advisor serves as investment advisor to each Fund pursuant to an Investment Advisory Agreement (the "Advisory Agreement") and a Subadvisor serves as investment subadvisor to a Fund pursuant to an Investment Subadvisory Agreement (the "Subadvisory Agreement"). The Advisory Agreement and the Subadvisory Agreement, for each subadvisor, were approved by the Independent Trustees of the Trust. The basis for the Trustees' approval of the Advisory Agreement and each Subadvisory Agreement are available in the Trust's Annual Report to shareholders.

Section 15(a) of the 1940 Act requires that all contracts pursuant to which persons serve as investment advisors to investment companies be approved by shareholders. As interpreted, this requirement also applies to the appointment of subadvisors to the Funds. The Advisor and the Trust have obtained an exemptive order (the

"Order") from the SEC permitting the Advisor, on behalf of the Funds and subject to the approval of the Board, including a majority of the Independent Trustees, to hire or terminate unaffiliated subadvisors and to modify any existing or future subadvisory agreement with unaffiliated subadvisors without shareholder approval. This authority is subject to certain conditions. A Fund will notify shareholders and provide them with certain information required by the Order within 90 days of hiring a new subadvisor. A Fund's sole shareholder has approved the use of the Order.

Expense Limitation Agreement

The Advisor has contractually agreed to waive or reduce its management fee and/or reimburse expenses of the Funds in an amount that limits "Total Annual Fund Operating Expenses" (excluding interest, taxes, brokerage commissions, dividend payments on short sales, acquired fund fees and expenses, other expenditures which are capitalized in accordance with generally accepted accounting principles, other extraordinary expenses not incurred in the ordinary course of a Fund's business, and amounts, if any, payable pursuant to a plan adopted in accordance with Rule 12b-1 under the 1940 Act) to not more than the average daily net assets of a Fund as set forth in the table below. The agreement will remain in effect unless terminated by the Board of Trustees of the Funds.

Fund Name	Total Annual Fund Operating Expenses After Expense Waiver/Reimbursement
IQ Ultra Short Duration ETF	0.24%
IQ MacKay ESG Core Plus Bond ETF	0.39%
IQ MacKay ESG High Income ETF	0.40%
IQ MacKay Multi-Sector Income ETF	0.40%
IQ MacKay Municipal Insured ETF	0.30%
IQ MacKay Municipal Intermediate ETF	0.30%
IQ MacKay California Municipal Intermediate ETF	0.35%

Subadvisors

Under the supervision of the Advisor, the Subadvisors listed below are responsible for making the specific decisions about the following: (i) buying, selling and holding securities; (ii) selecting brokers and brokerage firms to trade for them; (iii) maintaining accurate records; and, if possible, (iv) negotiating favorable commissions and fees with the brokers and brokerage firms. For these services, each Subadvisor is paid a monthly fee by the Advisor out of the Advisor's management fee, not the Fund. See the SAI for additional information about fees. To the extent that the Advisor has agreed to waive its management fee or reimburse expenses, each Subadvisor has agreed to waive or reimburse its fee proportionately. The basis for the Board approval of the Subadvisory Agreement is available in the Trust's Annual Report to shareholders.

NYL Investors LLC ("NYL Investors"), located at 51 Madison Avenue, New York, NY 10010, serves as the subadvisor to the IQ MacKay Ultra Short Duration ETF. NYL Investors was established in 2014 as an independent investment advisor. Previously, NYL Investors operated as a division of New York Life Investment Management LLC. NYL Investors is a wholly-owned subsidiary of New York Life. As of June 30, 2023, NYL Investors managed approximately \$303.3 billion in assets.

MacKay Shields LLC ("MacKay Shields"), located at 1345 Avenue of the Americas, New York, New York 10105, serves as the subadvisor to the IQ MacKay ESG Core Plus Bond ETF, IQ MacKay ESG High Income ETF, IQ MacKay Multi-Sector Income ETF, IQ MacKay Municipal Insured ETF, IQ MacKay Municipal Intermediate ETF, and IQ MacKay California Municipal Intermediate ETF. MacKay Shields was incorporated in 1969 and has been registered as an investment advisor with the SEC since 1969. Today MacKay Shield's is an indirect wholly-owned subsidiary of New York Life. MacKay Shields' principal office is located at. As of June 30, 2023, MacKay Shields had approximately \$134.1 billion in assets under management.

In rendering investment advisory services to the IQ MacKay ESG Core Plus Bond ETF and IQ MacKay Multi-Sector Income ETF, MacKay Shields uses the portfolio management, trading, research and other resources of MacKay Shields UK LLP ("MacKay UK"), an indirect, wholly-owned subsidiary of MacKay Shields that is not registered under the Investment Advisers Act of 1940. MacKay UK is a registered firm with the Financial Conduct Authority. MacKay Shields has designated MacKay UK as a "participating affiliate" of MacKay Shields in accordance with applicable SEC no-action letters, which permit SEC-registered investment advisors to use portfolio management or research resources of advisory affiliates subject to the regulatory supervision of the SEC-registered investment advisor. This means that from time-to-time MacKay Shields will delegate portfolio

management, trading, research, and other services for the ETFs to MacKay UK as a participating affiliate, and investment personnel of MacKay UK will provide such services to the ETFs under an arrangement with MacKay Shields. The ETFs pay no additional fees and expenses as a result of this arrangement.

Portfolio Management

The following section provides biographical information about the Funds' portfolio managers. Additional information about the portfolio managers' compensation, other accounts managed, and ownership of the Funds is available in the SAI.

NYL Investors' Portfolio Managers:

Matthew Downs, Senior Director

Mr. Downs is a Senior Director of NYL Investors LLC and has served as a portfolio manager of the IQ Ultra Short Duration ETF since its inception. He has served as a portfolio manager of the IQ MacKay ESG Core Plus Bond ETF and IQ MacKay Multi-Sector Income ETF since May 2023. Mr. DePalma is responsible for managing all Multi-Sector and related strategies. Previously, Mr. DePalma was Co-Head of MacKay's Macro and Quantitative Solutions. Prior to joining MacKay Shields, Mr. DePalma was the CEO of PhaseCapital, where he managed systematic macro and credit strategies. Prior to joining PhaseCapital, Mr. DePalma was Chief Investment Officer for Quantitative Investment Strategies and Director of Fixed Income Absolute Return at AllianceBernstein where he managed multi-asset, multi-sector, global and credit fixed income, as well as stand-alone and overlay currency strategies. Prior to assuming this role, Mr. DePalma was Global Director of Fixed Income Quantitative Research. Mr. DePalma graduated with a B.S. from Northeastern University and a M.S. from New York University's Courant Institute of Mathematical Sciences. He has been in the investment industry since 1990.

David Dowden, Managing Director

Mr. Dowden joined MacKay Shields in 2009. He has served as a portfolio manager of the IQ MacKay Municipal Insured ETF and IQ MacKay Municipal Intermediate ETF since each fund's inception. Before joining the firm, he was Chief Investment Officer at Financial Guaranty Insurance Company. Mr. Dowden was previously with Alliance Capital Management as a Senior Portfolio Manager and at Merrill Lynch & Co. as a Municipal Strategist. Mr. Dowden has an AB from Brown University and an MBA from Columbia University. He has been in the investment management industry since 1989.

Philip Fielding, Senior Managing Director

Mr. Fielding is Co-Head and Portfolio Manager of the Emerging Market Debt team. Mr. Fielding has served as a portfolio manager of the IQ MacKay ESG Core Plus Bond ETF and IQ MacKay Multi-Sector Income ETF since August 2023. He joined MacKay UK in 2021 from BMO Global Asset Management where he also co-headed the Emerging Market Debt capability. Mr. Fielding started his career at F&C Investments in 2006, spent 4 years at First State Investments from 2011 to 2015, before re-joining his colleagues at BMO Global Asset Management in 2015 after the company merged with F&C. Mr. Fielding earned a Master's degree in economics from St Gallen University in Switzerland, and is a CFA charterholder. He has been in the investment industry since 2006.

Sanjit Gill, Director

Mr. Gill is a Director and Portfolio Manager for MacKay Municipal Managers at MacKay Shields and joined MacKay Shields in 2021. Mr. Gill has served as a portfolio manager of the IQ MacKay Multi-Sector Income ETF since its inception. Prior to joining, he was a retail high grade and electronic trader at Bank of America Merrill Lynch. He earned a Bachelor's degree in Mathematics and Psychology from Baruch College in 2016 and a Master's in Applied Mathematics from Hunter College in 2021. He is a CFA Charterholder, and has been in the financial services industry since 2016.

Matt Jacob, Managing Director

Mr. Jacob is a Managing Director and Senior Portfolio Manager on the Global Credit team and also a member of the Investment Policy Committee. He has served as a portfolio manager of the IQ MacKay ESG High Income ETF since its inception and IQ MacKay Multi-Sector Income ETF since August 2023. As the Co-Chair of the Credit Committee, Mr. Jacob is responsible for corporate credit investments across all the group's portfolios as well as dedicated corporate investment grade, high yield and bank loan strategies. He joined the firm as a Portfolio Analyst for the Global Fixed Income team in February 2011. He came to MacKay Shields from KDI Capital Partners where as an Equity Sector Leader for the firm's fundamental research efforts in the core consumer sector. Prior to KDI, he worked at Buckingham Research Group and Johnson Rice & Company, LLC, where he gained extensive experience in equity sales and research. Mr. Jacob received his MBA with a concentration in Finance from Tulane University, Freeman School of Business in 2006 and a BS in Finance with a specialization in Internal Audit from Louisiana State University in 2001. He has been in the investment research industry since 2002.

John Lawlor, Managing Director

Mr. Lawlor joined MacKay Shields in 2016. He has served as a portfolio manager of the IQ MacKay Municipal Insured ETF, IQ MacKay Municipal Intermediate ETF and IQ MacKay California Municipal Intermediate ETF since each fund's inception. Before joining the firm, he was Vice President Equity Sales at Deutsche Bank and was previously at Bank of America Merrill Lynch. From 1997-2011, he was a senior trader on the floor of the New York Stock Exchange. Mr. Lawlor has a broad and diverse set of skills in sales, trading, and electronic trading platforms. He earned a Bachelor's degree in Finance from Lehigh University. Mr. Lawlor graduated from college in 1997. He has been in the financial services industry since 1997.

Frances Lewis, Senior Managing Director

Ms. Lewis joined MacKay Shields in July 2009. He has served as a portfolio manager of the IQ MacKay Municipal Insured ETF and IQ MacKay Municipal Intermediate ETF since August 2018 and IQ MacKay California Municipal Intermediate ETF since August 2023. Before joining the firm, she was Director of Research for Mariner Municipal Managers and was previously at Merrill Lynch. Ms. Lewis began her municipal analyst career in 1991 at Merrill Lynch Investment Managers where she was a Senior Fund Analyst covering various sectors of the municipal market, becoming a Director in the Municipal Research Group in 1997. Ms. Lewis earned an MBA in Finance from Boston University and a BS in Economics from the University of Michigan.

Neil Moriarty, Senior Managing Director

Mr. Moriarty is a Senior Managing Director and Senior Portfolio Manager for the Global Fixed Income Team of MacKay Shields LLC. He has served as a portfolio manager of the IQ MacKay ESG Core Plus Bond ETF and the IQ MacKay Multi-Sector Income ETF since each fund's inception. He has managed the MainStay Income Builder Fund and MainStay MacKay Total Return Bond Fund since 2018. Prior to joining MacKay Shields in 2018, Mr. Moriarty was with Aberdeen via the 2005 acquisition of Deutsche Asset Management's London and Philadelphia Fixed income businesses. While at Aberdeen, his responsibilities included Head of US Core, Structured Products and Co-Head of US Core Short Duration. Mr. Moriarty joined Deutsche in 2002 from Swarthmore/Cypress Capital Management where he worked in fixed income portfolio management. Previously, Mr. Moriarty worked for Chase Securities in fixed income trading and research. Prior to that, Mr. Moriarty worked for Paine Webber in fixed income trading and research. Mr. Moriarty has been working in the investment industry since 1987.

Tom Musmanno, Managing Director

Mr. Musmanno joined MacKay Shields in April 2021 and currently serves as the Chief Operating Officer of MacKay Shields' non-Municipal fixed income business. He has served as a portfolio manager of the IQ MacKay ESG Core Plus Bond ETF and IQ MacKay Multi-Sector Income ETF since May 2023. In addition, Mr. Musmanno is a Portfolio Manager on the Global Fixed Income team. Prior to joining MacKay, he previously worked for more than twenty years at Blackrock where he was responsible for their \$75 billion plus Short Duration strategies and worked closely with the multi sector teams. He also served as a Portfolio Manager within the Global Fixed Income division at Merrill Lynch Investment Managers prior to it being acquired by BlackRock in 2006. Mr. Musmanno earned his Bachelors of Science in Finance from Siena College and his MBA in Finance from St. John's University and is a CFA charterholder. Mr. Musmanno's career in the investment management industry began in 1991.

Lesya Paisley, Director

Ms. Paisley, CFA is a Portfolio Manager on the Global Fixed Income team. He has a BA in Economics from Colgate University, an MBA from Cornell University and is a CFA charterholder. Mr. White has been in the financial services industry since 2004.

Other Service Providers

Fund Administrator, Custodian, Transfer Agent and Securities Lending Agent

The Bank of New York Mellon ("BNY Mellon"), located at 240 Greenwich Street, New York, New York 10286, serves as the Funds' Administrator, Custodian, Transfer Agent and Securities Lending Agent. BNY Mellon is the principal operating subsidiary of The Bank of New York Mellon Corporation.

Under the Fund Administration and Accounting Agreement (the "Administration Agreement"), BNY Mellon serves as Administrator for the Funds. Under the Administration Agreement, BNY Mellon provides necessary administrative, legal, tax, accounting services, and financial reporting for the maintenance and operations of the Trust. In addition, BNY Mellon makes available the office space, equipment, personnel and facilities required to provide such services.

BNY Mellon supervises the overall administration of the Trust, including, among other responsibilities, assisting in the preparation and filing of documents required for compliance by the Funds with applicable laws and regulations and arranging for the maintenance of books and records of the Funds. BNY Mellon provides persons satisfactory to the Board to serve as officers of the Trust.

Distributor

ALPS Distributors, Inc. ("ALPS" or the "Distributor"), located at 1290 Broadway, Suite 1000, Denver, Colorado 80203, serves as the Distributor of Creation Units for the Funds on an agency basis. The Distributor does not maintain a Secondary Market in the Funds' Shares. NYLIFE Distributors LLC has entered into a Services Agreement with ALPS to market the Funds.

Independent Registered Public Accounting Firm

PricewaterhouseCoopers LLP, located at 300 Madison Avenue, New York, NY 10017, serves as the independent registered public accounting firm for the Trust.

Legal Counsel

Chapman and Cutler LLP, located at 1717 Rhode Island Avenue, Washington, D.C. 20036, serves as counsel to the Trust and the Funds.

Frequent Trading

The Board has not adopted policies and procedures with respect to frequent purchases and redemptions of Shares by Fund shareholders ("market timing"). In determining not to adopt market timing policies and procedures, the Board evaluated the risks posed by market timing activities, including dilution, disruption of portfolio management, increases in a Fund's trading costs and the realization of capital gains. The Board ultimately determined that due to an ETF's creation/redemption mechanism, whereby Fund Shares can only be purchased and redeemed directly from the Fund in Creation Units by Authorized Participants, and that the vast majority of trading in Fund Shares occurs on the Secondary Market and does not involve a Fund directly, it is unlikely those trades would cause many of the harmful effects of market timing. Accordingly, the Board determined that it is not necessary to adopt market timing policies and procedures.

Distribution and Service Plan

The Board has adopted a Distribution and Service Plan pursuant to Rule 12b-1 under the 1940 Act. In accordance with its Rule 12b-1 plan, each Fund is authorized to pay an amount up to 0.25% of its average daily net assets each year to finance activities primarily intended to result in the sale of Creation Units of each Fund or the provision of investor services. No Rule 12b-1 fees are currently paid by the Funds and there are no plans to impose these fees. However, in the event Rule 12b-1 fees are charged in the future, they will be paid out of the respective Fund's assets, and over time these fees will increase the cost of your investment and they may cost you more than certain other types of sales charges.

The Advisor and its affiliates may, out of their own resources, pay amounts ("Payments") to third-parties for distribution or marketing services on behalf of the Funds. The making of these payments could create a conflict of interest for a financial intermediary receiving such payments. The Advisor may make Payments for such third-parties to organize or participate in activities that are designed to make registered representatives, other professionals and individual investors more knowledgeable about ETFs, including ETFs advised by the Advisor, or for other activities, such as participation in marketing activities and presentations, educational training programs, conferences, the development of technology platforms and reporting systems ("Education Costs"). The Advisor also may make Payments to third-parties to help defray costs typically covered by a trading commission, such as certain printing, publishing and mailing costs or materials relating to the marketing of services related to exchange-traded products (such as commission-free trading platforms) or exchange-traded products in general ("Administrative Costs").

Determination of Net Asset Value (NAV)

The NAV of the Shares for a Fund is equal to the Fund's total assets minus its total liabilities divided by the total number of Shares outstanding. Interest and investment income on a Fund's assets accrue daily and are included in the Fund's total assets. Expenses and fees (including investment advisory, management, administration and distribution fees, if any) accrue daily and are included in a Fund's total liabilities. The NAV that is published is rounded to the nearest cent; however, for purposes of determining the price of Creation Units, the NAV is calculated to eight decimal places. The NAV is calculated by the Administrator and Custodian and determined each day the NYSE Arca is open for trading as of the close of regular trading on the NYSE Arca (ordinarily 4:00 p.m. Eastern time).

A Fund typically values fixed-income portfolio securities using last available bid prices or current market quotations provided by dealers or prices (including evaluated prices) supplied by the Fund's approved independent third-party pricing services. Pricing services may use matrix pricing or valuation models that utilize certain inputs and assumptions to derive values. Pricing services generally value fixed-income securities assuming orderly transactions of an institutional round lot size, but a Fund may hold or transact in such securities in smaller odd lot sizes. Odd lots often trade at different prices that may be above or below the price at which the pricing service has valued the security. An amortized cost method of valuation may be used with respect to debt obligations with sixty days or less remaining to maturity unless the Advisor determines in good faith that such method does not represent fair value.

Generally, trading in U.S. government securities, money market instruments and certain fixed-income securities is substantially completed each day at various times prior to the close of business on the NYSE. The values of such securities used in computing the NAV of the Funds are determined as of such times.

Equity securities are generally valued at the closing price of the security on the security's primary exchange. The primary exchanges for a Fund's foreign equity securities may close for trading at various times prior to close of regular trading on the NYSE Arca or the Nasdaq, and the value of such securities used in computing the Fund's NAV are generally determined as of such times. A Fund's foreign securities may trade on weekends or other days when Shares do not trade. Consequently, the value of portfolio securities of a Fund may change on days when Shares of the Fund cannot be purchased or sold.

When market quotations or prices are not readily available or are deemed unreliable or not representative of an investment's fair value, investments are valued using fair value pricing as determined in good faith by the Advisor under procedures established by and under the general supervision and responsibility of the Board. The Advisor may conclude that a market quotation is not readily available or is unreliable if a security or other asset or liability does not have a price source due to its lack of liquidity or other reason, if a market quotation differs significantly from recent price quotations or otherwise no longer appears to reflect fair value, where the security or other asset or liability is thinly traded, or if the trading market on which a security is listed is suspended or closed and no appropriate alternative trading market is available.

The frequency with which the Funds' investments are valued using fair value pricing is primarily a function of the types of securities and other assets in which the respective Fund invests pursuant to its investment objective, strategies and limitations. If the Funds invest in other open-end management investment companies registered under the 1940 Act, they may rely on the NAVs of those companies to value the shares they hold of them. Those companies may also use fair value pricing under some circumstances.

Valuing each Fund's investments using fair value pricing results in using prices for those investments that may differ from current market valuations. Accordingly, fair value pricing could result in a difference between the prices used to calculate NAV and the prices used to determine each Fund's indicative intra-day value ("IIV"), which could result in the market prices for Shares deviating from NAV.

Premium/Discount Information

Information regarding the extent and frequency with which market prices of Shares have tracked the relevant Fund's NAV is available without charge on the Funds' website at newyorklifeinvestments.com/eff.

Dividends, Distributions and Taxes

Net Investment Income and Capital Gains

As a Fund shareholder, you are entitled to your share of each Fund's distributions of net investment income and net realized capital gains on its investments. The Funds pay out substantially all of their net earnings to their shareholders as "distributions."

The Funds typically earn dividends from stocks and interest from debt securities. These amounts, net of expenses, typically are passed along to Fund shareholders as dividends from net investment income. The Funds realize capital gains or losses whenever they sell securities. Net capital gains typically are passed along to shareholders as "capital gain distributions."

Net investment income and net capital gains typically are distributed to shareholders at least annually. Dividends may be declared and paid more frequently to comply with the distribution requirements of the U.S. Internal Revenue Code of 1986, as amended (the "Code"). In addition, the Funds may decide to distribute at least annually amounts representing the full dividend yield net of expenses on the underlying investment securities, as if the Funds owned the underlying investment securities for the entire dividend period, in which case some portion of each distribution may result in a return of capital. You will be notified regarding the portion of a distribution that represents a return of capital.

Distributions in cash may be reinvested automatically in additional Shares of a Fund only if the broker through which you purchased Shares makes such option available. Distributions which are reinvested nevertheless will be subject to U.S. federal income tax to the same extent as if such distributions had not been reinvested.

U.S. Federal Income Taxation

The following is a summary of certain U.S. federal income tax considerations applicable to an investment in Shares of a Fund. The summary is based on the Code, U.S. Treasury Department regulations promulgated thereunder, and judicial and administrative interpretations thereof, all as in effect on the date of this Prospectus and all of which are subject to change, possibly with retroactive effect. In addition, this summary assumes that a Fund shareholder holds Shares as capital assets within the meaning of the Code and does not hold Shares in connection with a trade or business. This summary does not address all potential U.S. federal income tax considerations possibly applicable to an investment in Shares of a Fund, and does not address the consequences to Fund shareholders subject to special tax rules, including, but not limited to, partnerships and the partners therein, tax-exempt shareholders, regulated investment companies ("RICs"), real estate investment trusts ("REITs"), real estate mortgage investment conduits ("REMICs"), those who hold Shares through an IRA, 401(k) plan or other tax-advantaged account, and, except to the extent discussed below, "non-U.S. shareholders" (as defined below). This discussion does not discuss any aspect of U.S. state, local, estate, and gift, or non-U.S., tax law. Furthermore, this discussion is not intended or written to be legal or tax advice to any shareholder in a Fund or other person and is not intended or written to be used or relied on, and cannot be used or relied on, by any such person for the purpose of avoiding any U.S. federal tax penalties that may be imposed on such person. Prospective Fund shareholders are urged to consult their own tax advisors with respect to the specific U.S. federal, state and local, and non-U.S., tax consequences of investing in Shares, based on their particular circumstances.

The Funds have not requested and will not request an advance ruling from the U.S. Internal Revenue Service (the "IRS") as to the U.S. federal income tax matters described below. The IRS could adopt positions contrary to those discussed below and such positions could be sustained. Prospective investors should consult their own tax advisors with regard to the U.S. federal tax consequences of the purchase, ownership and disposition of Shares, as well as the tax consequences arising under the laws of any state, locality, non-U.S. country or other taxing jurisdiction. The following information supplements, and should be read in conjunction with, the section in the SAI entitled "U.S. Federal Income Taxation."

Tax Treatment of a Fund

Each Fund intends to continue to qualify and elect to be treated as a separate RIC under the Code. To qualify and remain eligible for the special tax treatment accorded to RICs, each Fund must meet certain annual income and quarterly asset diversification requirements and must distribute annually at least 90% of the sum of (i) its "investment company taxable income" (which includes dividends, interest and net short-term capital gains) and (ii) its net tax-exempt interest income.

As a RIC, a Fund generally will not be required to pay corporate-level U.S. federal income taxes on any ordinary income or capital gains that it distributes to its shareholders. If a Fund fails to qualify as a RIC for any year (subject to certain curative measures allowed by the Code), the Fund will be subject to regular corporate-level U.S. federal income tax in that year on all of its taxable income, regardless of whether the Fund makes any distributions to its shareholders. In addition, in such case, distributions will be taxable to a Fund's shareholders generally as ordinary dividends to the extent of the Fund's current and accumulated earnings and profits. The remainder of this discussion assumes that the Funds will qualify for the special tax treatment accorded to RICs.

A Fund generally will be subject to a 4% excise tax on certain undistributed income if the Fund does not distribute to its shareholders in each calendar year an amount at least equal to the sum of 98% of its ordinary income for the calendar year (taking into account certain deferrals and elections), 98.2% of its capital gain net income (adjusted for certain ordinary losses) for the twelve months ended October 31 of such year (or later if the Fund is permitted to elect and so elects), plus 100% of any undistributed amounts from prior years. For these purposes, a Fund will be treated as having distributed any amount on which it has been subject to U.S. corporate income tax for the taxable year ending within the calendar year. Each Fund intends to make distributions necessary to avoid this 4% excise tax, although there can be no assurance that it will be able to do so.

A Fund may be required to recognize taxable income in advance of receiving the related cash payment. For example, if a Fund invests in original issue discount obligations (such as zero coupon debt instruments or debt instruments with payment-in-kind interest), the Fund will be required to include in income each year a portion of the original issue discount that accrues over the term of the obligation, even if the related cash payment is not received by the Fund until a later year. Under the "wash sale" rules, a Fund may not be able to deduct currently a loss on a disposition of a portfolio security. As a result, a Fund may be required to make an annual income distribution greater than the total cash actually received during the year. Such distribution may be made from the existing cash assets of the Fund or cash generated from selling portfolio securities. The Fund may realize gains or losses from such sales, in which event its shareholders may receive a larger capital gain distribution than they would in the absence of such transactions.

Tax Treatment of Fund Shareholders

Taxation of U.S. Shareholders

The following is a summary of certain U.S. federal income tax consequences of the purchase, ownership and disposition of Shares applicable to "U.S. shareholders." For purposes of this discussion, a "U.S. shareholder" is a beneficial owner of Shares who, for U.S. federal income tax purposes, is (i) an individual who is a citizen or resident of the U.S.; (ii) a corporation (or an entity treated as a corporation for U.S. federal income tax purposes) created or organized in the U.S. or under the laws of the U.S., or of any state thereof, or the District of Columbia; (iii) an estate, the income of which is includable in gross income for U.S. federal income tax purposes regardless of its source; or (iv) a trust, if (1) a U.S. court is able to exercise primary supervision over the administration of such trust and one or more U.S. persons have the authority to control all substantial decisions of the trust, or (2) the trust has a valid election in place to be treated as a U.S. person.

Fund Distributions. A majority of certain of the Funds' distributions to its shareholders is expected to be excluded from gross income for U.S. federal income tax purposes as "exempt-interest dividends." Notwithstanding the foregoing, such Fund shareholders should be aware of the following points:

- Some tax-exempt distributions from a Fund may be subject to the federal alternative minimum tax on individuals. For tax years beginning after December 31, 2022, tax exempt interest dividends may affect the corporate alternative minimum tax for certain corporations.
- Exempt-interest dividends may have other tax consequences to certain shareholders (for example, they may result in a portion of a shareholder's social security income being subject to federal income tax), and a shareholder may not be entitled to deduct the interest expense on debt deemed to be incurred or continued to purchase or carry Shares.

- Tax-exempt distributions from a Fund may be subject to state and local taxes.
- The Funds may earn taxable income. In other words, shareholders of a Fund may earn taxable income from the Fund even though the Fund generally intends to be tax-free to shareholders.
- Capital gains of a Fund are not tax-free to shareholders.
- Any time a shareholder sells Shares (even Shares of a generally tax-free Fund), such shareholder will be subject to tax on any gain.
- If a shareholder sells Shares of a Fund at a loss after receiving an exempt-interest dividend, and the shareholder has held the Shares for six months or less, then such shareholder may not be allowed to claim a loss on the sale.

In general, taxable Fund distributions are subject to U.S. federal income tax when paid, regardless of whether they consist of cash or property, and regardless of whether they are re-invested in Shares. However, any Fund distribution declared in October, November or December of any calendar year and payable to shareholders of record on a specified date during such month will be deemed to have been received by each Fund shareholder on December 31 of such calendar year, provided such dividend is actually paid during January of the following calendar year.

Distributions of a Fund's taxable net investment income (except, as discussed below, qualified dividend income, if any) and net short-term capital gains in excess of net long-term capital losses (collectively referred to as "ordinary income dividends") are taxable as ordinary income to the extent of the Fund's current and accumulated earnings and profits. Some portion of the ordinary income distributions that are attributable to dividends received by a Fund from shares in certain real estate investment trusts may be designated by the Fund as eligible for a deduction for qualified business income, provided certain holding period requirements are satisfied. To the extent designated as capital gain dividends by a Fund, distributions of the Fund's net long-term capital gains in excess of net short-term capital losses ("net capital gain") are taxable at long-term capital gain tax rates to the extent of the Fund's current and accumulated earnings and profits, regardless of the Fund shareholder's holding period in the Fund's Shares. Distributions of qualified dividend income are, to the extent of a Fund's current and accumulated earnings and profits, taxed to certain non-corporate Fund shareholders at the rates generally applicable to long-term capital gain, provided that the Fund shareholders meet certain holding period and other requirements with respect to the distributing Fund's Shares and the distributing Fund meets certain holding period and other requirements with respect to its dividend-paying stocks. For this purpose, "qualified dividend income" generally means income from dividends received by a Fund from U.S. corporations and qualified non-U.S. corporations. Distributions with respect to shares in real estate investment trusts are qualifying dividends only in limited circumstances. Substitute payments received on Shares that are lent out will be ineligible for being reported as qualified dividend income. Given their investment strategy, certain of the Funds do not anticipate that a significant portion of their distributions will be eligible for qualifying dividend treatment. If a Fund pays a dividend that would be "qualified dividend income" for individuals, corporate shareholders may be entitled to a dividends received deduction.

An election may be available to you to defer recognition of the gain attributable to a capital gain dividend if you make certain qualifying investments within a limited time. You should talk to your tax advisor about the availability of this deferral election and its requirements.

Each Fund intends to distribute its net capital gain at least annually. However, by providing written notice to its shareholders no later than 60 days after its year-end, a Fund may elect to retain some or all of its net capital gain and designate the retained amount as a "deemed distribution." In that event, the Fund pays U.S. federal income tax on the retained net capital gain, and each Fund shareholder recognizes a proportionate share of the Fund's undistributed net capital gain. In addition, each Fund shareholder can claim a tax credit or refund for the shareholder's proportionate share of the Fund's U.S. federal income taxes paid on the undistributed net capital gain and increase the shareholder's tax basis in the Shares by an amount equal to the shareholder's proportionate share of the Fund's undistributed net capital gain, reduced by the amount of the shareholder's tax credit or refund.

Distributions in excess of a Fund's current and accumulated earnings and profits will, as to each shareholder, be treated as a tax-free return of capital to the extent of the shareholder's tax basis in its Shares of the Fund, and generally as capital gain thereafter. Any such distribution will reduce the shareholder's tax basis in the Shares, and thus will increase the shareholder's capital gain, or decrease the capital loss, recognized upon a sale or exchange of Shares.

In addition, individuals with adjusted gross incomes above certain threshold amounts (and certain trusts and estates) generally are subject to a 3.8% Medicare tax on "net investment income" in addition to otherwise applicable U.S. federal income tax. "Net investment income" generally will include taxable dividends (including capital gain dividends) received from a Fund and net gains from the redemption or other disposition of Shares. Please consult your tax advisor regarding this tax.

Investors considering buying Shares just prior to a distribution should be aware that, although the price of the Shares purchased at such time may reflect the forthcoming distribution, such distribution nevertheless may be taxable (as opposed to a non-taxable return of capital).

Sales or Exchange of Shares. Any capital gain or loss realized upon a sale or exchange of Shares (including an exchange of Shares of one Fund for Shares of another Fund) generally is treated as a long-term gain or loss if the Shares have been held for more than one year. Any capital gain or loss realized upon a sale or exchange of Shares held for one year or less generally is treated as a short-term gain or loss, except that any capital loss on the sale or exchange of Shares held for six months or less, to the extent not disallowed as discussed in the next sentence, is treated as long-term capital loss to the extent that capital gain dividends were paid (or deemed to be paid) with respect to the Shares. Furthermore, a loss realized by a shareholder on the sale or exchange of Shares of a Fund with respect to which exempt-interest dividends have been paid may, to the extent of such exempt-interest dividends, be disallowed if such Shares have been held by the shareholder for six months or less at the time of their disposition. An election may be available to you to defer recognition of capital gain if you make certain qualifying investments within a limited time. You should talk to your tax advisor about the availability of this deferral election and its requirements.

Creation Unit Issues and Redemptions. On an issue of Shares of a Fund as part of a Creation Unit where the creation is conducted in-kind, an Authorized Participant generally recognizes capital gain or loss equal to the difference between (i) the fair market value (at issue) of the issued Shares (plus any cash received by the Authorized Participant as part of the issue) and (ii) the Authorized Participant's aggregate basis in the exchanged securities (plus any cash paid by the Authorized Participant as part of the issue). On a redemption of Shares as part of a Creation Unit where the redemption is conducted in-kind, an Authorized Participant generally recognizes capital gain or loss equal to the difference between (i) the fair market value (at redemption) of the securities received (plus any cash received by the Authorized Participant as part of the redemption) and (ii) the Authorized Participant's basis in the redeemed Shares (plus any cash paid by the Authorized Participant as part of the redemption). However, the IRS may assert, under the "wash sale" rules or on the basis that there has been no significant change in the Authorized Participant's economic position, that any loss on creation or redemption of Creation Units cannot be deducted currently.

In general, any capital gain or loss recognized upon the issue or redemption of Shares (as components of a Creation Unit) is treated either as long-term capital gain or loss, if the deposited securities (in the case of an issue) or the Shares (in the case of a redemption) have been held for more than one year, or otherwise as short-term capital gain or loss. However, any capital loss on a redemption of Shares held for six months or less, to the extent not disallowed as discussed in the next sentence, is treated as long-term capital loss to the extent that capital gain dividends were paid (or deemed to be paid) with respect to such Shares. Furthermore, a loss realized on the redemption of Shares of a Fund with respect to which exempt-interest dividends have been paid may, to the extent of such exempt-interest dividends, be disallowed if such Shares have been held for six months or less at the time of their disposition.

Taxation of California Residents

For a summary of certain California income tax consequences of the purchase, ownership and disposition of Shares of the IQ MacKay California Municipal Intermediate ETF applicable to full-time residents of the State of California, please see the section in the SAI entitled "California Tax Status."

Back-Up Withholding

A Fund (or a financial intermediary such as a broker through which a shareholder holds Shares in a Fund) may be required to report certain information on a Fund shareholder to the IRS and withhold U.S. federal income tax ("backup withholding") at a current rate of 24% from taxable distributions and redemption or sale proceeds payable to the Fund shareholder if (i) the Fund shareholder fails to provide the Fund with a correct taxpayer identification number or make required certifications, or if the IRS notifies the Fund that the Fund shareholder is otherwise subject to backup withholding, and (ii) the Fund shareholder is not otherwise exempt from backup

withholding. Non-U.S. shareholders can qualify for exemption from backup withholding by submitting a properly completed IRS Form W-8BEN or W-8BEN-E. Backup withholding is not an additional tax and any amount withheld may be credited against a Fund shareholder's U.S. federal income tax liability.

Taxation of Non-U.S. Shareholders

The following is a summary of certain U.S. federal income tax consequences of the purchase, ownership and disposition of Shares applicable to "non-U.S. shareholders." For purposes of this discussion, a "non-U.S. shareholder" is a beneficial owner of Shares that is not a U.S. shareholder (as defined above) and is not an entity or arrangement treated as a partnership for U.S. federal income tax purposes. The following discussion is based on current law and is for general information only. It addresses only selected, and not all, aspects of U.S. federal income taxation applicable to non-U.S. shareholders.

As indicated above, a majority of certain of the Funds' distributions to its shareholders, including its non-U.S. shareholders, is expected to be excluded from gross income for U.S. federal income tax purposes as exempt-interest dividends. However, with respect to non-U.S. shareholders of a Fund, the Fund's ordinary income dividends generally will be subject to U.S. federal withholding tax at a rate of 30% (or at a lower rate established under an applicable tax treaty), subject to certain exceptions for "interest-related dividends" and "short-term capital gain dividends" discussed below. The Funds will not pay any additional amounts to shareholders in respect of any amounts withheld. U.S. federal withholding tax generally will not apply to any gain realized by a non-U.S. shareholder in respect of a Fund's net capital gain. Special rules (not discussed herein) apply with respect to dividends of a Fund that are attributable to gain from the sale or exchange of "U.S. real property interests."

In general, all "interest-related dividends" and "short-term capital gain dividends" (each defined below) will not be subject to U.S. federal withholding tax, provided that, among other requirements, the non-U.S. shareholder furnished the Fund with a completed IRS Form W-8BEN or W-8BEN-E, as applicable, (or acceptable substitute documentation) establishing the non-U.S. shareholder's non-U.S. status and the Fund does not have actual knowledge or reason to know that the non-U.S. shareholder would be subject to such withholding tax if the non-U.S. shareholder were to receive the related amounts directly rather than as dividends from the Fund. "Interest-related dividends" generally means dividends designated by a Fund as attributable to such Fund's U.S.-source interest income, other than certain contingent interest and interest from obligations of a corporation or partnership in which such Fund is at least a 10% shareholder, reduced by expenses that are allocable to such income. "Short-term capital gain dividends" generally means dividends designated by a Fund as attributable to the excess of such Fund's net short-term capital gain over its net long-term capital loss. Depending on its circumstances, a Fund may treat such dividends, in whole or in part, as ineligible for these exemptions from withholding.

For tax years after December 31, 2022, amounts paid to or recognized by a non-U.S. affiliate that are excluded from tax under the portfolio interest, capital gains dividends, short-term capital gains or tax-exempt interest dividend exceptions or applicable treaties, may be taken into consideration in determining whether a corporation is an "applicable corporation" subject to a 15% minimum tax on adjusted financial statement income.

In general, subject to certain exceptions, non-U.S. shareholders will not be subject to U.S. federal income or withholding tax in respect of a sale or other disposition of Shares of a Fund.

To claim a credit or refund for any Fund-level taxes on any undistributed net capital gain (as discussed above) or any taxes collected through back-up withholding (discussed above), a non-U.S. shareholder must obtain a U.S. taxpayer identification number and file a U.S. federal income tax return even if the non-U.S. shareholder would not otherwise be required to do so.

Foreign Account Tax Compliance Act

The U.S. Foreign Account Tax Compliance Act ("FATCA") generally imposes a 30% withholding tax on "withholdable payments" (defined below) made to (i) a "foreign financial institution" ("FFI"), unless the FFI enters into an agreement with the IRS to provide information regarding certain of its direct and indirect U.S. account holders and satisfy certain due diligence and other specified requirements, and (ii) a "non-financial foreign entity" ("NFFE") unless such NFFE provides certain information about its direct and indirect "substantial U.S. owners" to the withholding agent or certifies that it has no such U.S. owners. The beneficial owner of a "withholdable payment" may be eligible for a refund or credit of the withheld tax. The U.S. government also has entered into intergovernmental agreements with other jurisdictions to provide an alternative, and generally

easier, approach for FFIs to comply with FATCA. If the shareholder is a tax resident in a jurisdiction that has entered into an intergovernmental agreement with the U.S. government, the shareholder will be required to provide information about the shareholder's classification and compliance with the intergovernmental agreement.

"Withholdable payments" generally include, among other items, U.S.-source interest and dividends, and gross proceeds from the sale or disposition of property of a type that can produce U.S.-source interest or dividends. However, proposed regulations may eliminate the requirements to withhold on payments of gross proceeds from dispositions.

A Fund or a shareholder's broker may be required to impose a 30% withholding tax on withholdable payments to a shareholder if the shareholder fails to provide the Fund with the information, certifications or documentation required under FATCA, including information, certification or documentation necessary for the Fund to determine if the shareholder is a non-U.S. shareholder or a U.S. shareholder and, if it is a non-U.S. shareholder, if the non-U.S. shareholder has "substantial U.S. owners" and/or is in compliance with (or meets an exception from) FATCA requirements. A Fund will not pay any additional amounts to shareholders in respect of any amounts withheld. The Fund may disclose any shareholder information, certifications or documentation to the IRS or other parties as necessary to comply with FATCA.

The requirements of, and exceptions from, FATCA are complex. All prospective shareholders are urged to consult their own tax advisors regarding the potential application of FATCA with respect to their own situation.

For a more detailed tax discussion regarding an investment in the Funds, please see the section of the SAI entitled "U.S. Federal Income Taxation."

Code of Ethics

The Trust, Advisor, the Subadvisors, NYL Investors and MacKay Shields, and the Distributor have each adopted a code of ethics under Rule 17j-1 of the 1940 Act that is designed to prevent affiliated persons of the Trust, the Advisor, each Subadvisor and the Distributor from engaging in deceptive, manipulative or fraudulent activities in connection with securities held or to be acquired by the Funds (which may also be held by persons subject to a code). There can be no assurance that the codes will be effective in preventing such activities. The codes permit personnel subject to them to invest in securities, including securities that may be held or purchased by the Funds. The codes are on file with the SEC and are available to the public.

Fund Website and Disclosure of Portfolio Holdings

The Advisor maintains a website for the Funds at newyorklifeinvestments.com/etf. The website for the Funds contains the following information, on a per-Share basis, for each Fund: (1) the prior Business Day's NAV; (2) the reported midpoint of the bid-ask spread at the time of NAV calculation (the "Bid-Ask Price"); (3) a calculation of the premium or discount of the Bid-Ask Price against such NAV; and (4) data in chart format displaying the frequency distribution of discounts and premiums of the Bid-Ask Price against the NAV, within appropriate ranges, for each of the four previous calendar quarters (or for the life of a Fund if, shorter). In addition, on each Business Day, before the commencement of trading in Shares on the Exchange, each Fund will disclose on its website (newyorklifeinvestments.com/etf) the identities and quantities of the portfolio securities and other assets held by each Fund that will form the basis for the calculation of NAV at the end of the Business Day.

A description of each Fund's policies and procedures with respect to the disclosure of the Fund's portfolio securities is available in the SAI.

Other Information

The Funds are not sponsored, endorsed, sold or promoted by the NYSE Arca. The NYSE Arca makes no representation or warranty, express or implied, to the owners of Shares or any member of the public regarding the advisability of investing in securities generally or in the Funds particularly or the ability of the Funds to achieve their objectives. The NYSE Arca has no obligation or liability in connection with the administration, marketing or trading of the Funds.

For purposes of the 1940 Act, the Funds are treated as registered investment companies, and the acquisition of shares by other registered investment companies and companies relying on Sections 3(c)(1) and 3(c)(7) of the 1940 Act are subject to the restrictions of Section 12(d)(1) of the 1940 Act and the related rules and interpretations.

Financial Highlights

Selected Data for a Share of Capital Stock Outstanding

The financial highlights tables are intended to help you understand the Funds' financial performance for the past five fiscal years or, if shorter, the period of the Funds' operations. Certain information reflects financial results for a single Fund Share. The total returns in the tables represent the rate that an investor would have earned (or lost) on an investment in the respective Fund (assuming reinvestment of all dividends and distributions). This information has been audited by PricewaterhouseCoopers LLP, whose report, along with each Fund's financial statements, is included in the Funds' Annual Report, which is available upon request.

Privacy Policy

The following notice does not constitute part of the Prospectus, nor is it incorporated into the Prospectus.

The Trust is committed to respecting the privacy of personal information you entrust to us in the course of doing business with us.

The Trust may collect non-public personal information from various sources. The Trust uses such information provided by you or your representative to process transactions, to respond to inquiries from you, to deliver reports, products, and services, and to fulfill legal and regulatory requirements.

We do not disclose any non-public personal information about our customers to anyone unless permitted by law or approved by the customer. We may share this information within the Trust's family of companies in the course of providing services and products to best meet your investing needs. We may share information with certain third-parties who are not affiliated with the Trust to perform certain business administration and related business services, such as processing transactions or servicing accounts, or as permitted by law. For example, we may share information with a company that maintains or services customer accounts for the Trust. When we enter into such a relationship, we restrict the company's use of our customers' information and prohibit them from sharing it or using it for any purposes other than those for which they were hired.

We maintain physical, electronic, and procedural safeguards to protect your personal information. Within the Trust, we restrict access to personal information to those employees who require access to that information in order to provide products or services to our customers, such as handling inquiries. Our employment policies restrict the use of customer information and require that it be held in strict confidence.

We will adhere to the policies and practices described in this notice for both current and former customers of the Trust.

PROSPECTUS | AUGUST 31, 2023

FOR MORE INFORMATION

If you would like more information about the Trust, the Funds and the Shares, the following documents are available free upon request:

Annual/Semi-annual Report

Additional information about a Fund's investments is available in the Fund's annual and semi-annual reports to shareholders. In the Fund's annual report, you will find a discussion of the market conditions and investment strategies that significantly affected the Fund's performance during the last fiscal year.

Statement of Additional Information

Additional information about the Funds and their policies is also available in the Funds' SAI. The SAI is incorporated by reference into this Prospectus (and is legally considered part of this Prospectus). The Funds' annual and semi-annual reports and the SAI are available free upon request by calling IndexIQ at 1-888-474-7725. You can also access and download the annual and semi-annual reports and the SAI at the Funds' website: newyorklifeinvestments.com/etf.

To obtain other information and for shareholder inquiries:

By telephone: 1-888-474-7725
