The chart above represents the fluctuating performance for various indices that represent certain asset classes, ranking them from highest to lowest based on annual total returns. Standard Deviation is a statistic that measures the dispersion of a dataset relative to its mean.

Source: Morningstar, December 31, 2024. Annual total returns for key asset classes. Indices are unmanaged, and one cannot invest directly into an index. The indices above do not represent the performance of any specific investment.

Index Definitions

Blended return represents an equally weighted combination of the 12 asset classes shown here.

Large stocks are represented by the S&P 500® Index, an unmanaged index and is widely regarded as the standard for measuring large-cap U.S. stock market performance.

Large growth stocks are represented by the Russell 1000® Growth Index, an unmanaged index that measures the performance of those Russell 1000 companies with higher price-to-book ratios and higher forecasted growth values.

Large value stocks are represented by the Russell 1000® Value Index, an unmanaged index that measures the performance of those Russell 1000 companies with lower price-to-book ratios and lower forecasted growth values.

Midcap stocks are represented by the Russell MidCap Index which measures the performance of the 800 smallest companies in the Russell 1000 Index, which consists of the largest 1,000 U.S. companies based on total market capitalization.

Midcap growth stocks are represented by the Russell MidCap® Growth Index, an unmanaged index that measures the performance of those Russell MidCap companies with higher price-to-book ratios and higher forecasted growth values.

Midcap value stocks are represented by the Russell MidCap® Value Index, an unmanaged index that measures the performance of those Russell MidCap companies with lower price-to-book ratios and lower forecasted growth values.

Small stocks are represented by the Russell 2000® Index is a popular measure of the stock price performance of small companies, consisting of the 2,000 smallest companies in the Russell 3000 Index.

Small growth socks are represented by the Russell 2000 Growth® Index, an unmanaged index that measures the performance of those Russell 2000 companies with higher price-to-book ratios and higher forecasted growth values.

Small value stocks are represented by the Russell 2000 Value® Index, an unmanaged index that measures the performance of those Russell 2000 companies with lower price-to-book ratios and lower forecasted growth values.

Foreign stocks are represented by the MSCI EAFE® Index, an unmanaged, capitalization-weighted index containing approximately 985 equity securities located outside the U.S.

Bonds are represented by the Bloomberg U.S. Aggregate Bond Index is a broad-based flagship benchmark that measures the investment grade, U.S. dollar-denominated, fixed-rate taxable bond market. The index includes Treasuries, government related and corporate securities, mortgage-backed securities (agency fixed-rate and hybrid adjustable-rate mortgage pass-throughs), asset-backed securities and commercial mortgage-backed securities (agency and non-agency).

Floating rate loans are represented by the Morningstar LSTA U.S. Leveraged Loan Index is a broad index designed to reflect the performance of U.S. dollar facilities in the leveraged loan market. Index results assume the reinvestment of all capital gain and dividend distributions.

Past performance is no guarantee of future results.

Stocks tend to be most volatile, whereas bonds may offer a fixed rate of return. Small company and mid cap growth and value stocks are more volatile than large company growth and value stocks, are subject to significant price fluctuations and business risks, and are thinly traded. There are also additional risks associated with bonds and foreign/international investing. Foreign currency fluctuations, political and economic stability, and differences in accounting standards may apply. Floating rate loans are generally considered to have speculative characteristics that involve default risk or principal and interest, collateral impairment, non-diversification, borrower industry concentration, and limited liquidity. Bonds are subject to interest-rate risk and can lose principal value when interest rates rise.
