Performance data quoted represents past performance. Past performance is no guarantee of future results. Due to market volatility, current performance may be less or higher than the figures shown. Investment return on principal value will fluctuate so that upon redemption, shares may be worth more or less than their original cost.

There can be no assurance that the Fund’s objective will be achieved.

1. Premium/Discount is the percentage (%) difference between the Market price and the NAV price. When the Market price exceeds the NAV, the Fund is trading at a Premium. When the Market price is less than the NAV, the Fund is trading at a Discount.

2. Market Price Dividend Rate is calculated by dividing the annualized dividend rate, by the market price at month end.

3. NAV Price Dividend Rate is calculated by dividing the annualized dividend rate, by the NAV at month end.

4. Managed Assets. Managed Assets is the Fund’s total assets (including any assets attributable to leverage), minus the sum of its accrued liabilities (other than Fund liabilities incurred for the purpose of creating effective leverage (i.e., TOBs) or Fund liabilities related to liquidation preference of any preferred shares issued). Leverage is based on the use of proceeds received from tender option bonds transactions (TOBs), issuing Preferred Shares, or funds borrowed from banks or other institutions, expressed as a percentage of “Managed Assets.”

5. Leveraged Duration is the duration of a bond computed using the bond’s nearest call date or maturity, whichever comes first. This measure ignores future cash flow fluctuations due to embedded optionality.

6. Duration to Worst. Duration to Worst is the duration of a bond computed using the bond’s nearest call date or maturity, whichever comes first. This measure ignores future cash flow fluctuations due to embedded optionality.

7. Leverage-adjusted duration. Duration is a measure of the price sensitivity of a bond or bond fund to changes in market interest rates. Generally, the longer a bond’s or fund’s duration, the more the price of the bond or fund will change as interest rates change. Leverage-adjusted duration takes into account the levering process for a fund and therefore results in a duration that is longer than the duration of the fund’s portfolio of bonds.

8. Percentages are based on fixed-income securities held in the Fund’s investment portfolio and exclude any equity or convertible securities and cash or cash equivalents. Ratings apply to the underlying portfolio of debt securities held by the Fund and are rated by an independent rating agency, such as Standard & Poor’s, Moody’s, and/or Fitch. If ratings are provided by the rating agencies, but differ, the higher rating will be utilized. If only one rating is provided, the available rating will be utilized. Securities that are unrated by the rating agencies are reflected as such in the breakdown. Unrated securities do not necessarily indicate low quality. S&P rates borrowers on a scale from AAA to D. A, A-, and A+ represent investment grade, while BB through D represent non-investment grade.

9. The Fund’s dividend is derived from its monthly undistributed net investment income and is not expected to contain any return of capital.

10. Average annual total returns shown at NAV assume dividends and capital gains distributions are reinvested and are net of all fees and expenses.

11. The Barclays Municipal Bond Index includes approximately 15,000 municipal bonds rated Baa or better by Moody’s, with a maturity of at least two years. Bonds subject to the Alternative Minimum Tax or with floating or zero coupons are excluded. The Barclays Municipal Bond Index is the Fund’s broad-based securities market index for comparison purposes. Total returns assume the reinvestment of all dividends and capital gains. An investment cannot be made directly into an index.

12. Call Exposure reflects the percentage of issues maturing or presently scheduled to be called from the Fund in the years specified. No assurance is made regarding whether or when the bonds may be called. Portfolio information is subject to change due to active management.

Before you invest

An investment in the Fund’s Common Shares is subject to investment risk, including the possible loss of the entire principal amount that you invest. The Fund uses leverage, which will magnify the Fund’s investment, market, and certain other risks. Leverage is a speculative technique that exposes the Fund to greater risk and increased costs than if it were not implemented. As with any stock, the price of the Fund’s Common Shares will fluctuate with market conditions and other factors. Shares of closed-end investment companies frequently trade at a discount from their NAV. Funds that invest in bonds are subject to interest-rate risk and can lose principal value when interest rates rise. Bonds are also subject to credit risk, in which the bond issuer may fail to pay interest and principal in a timely manner. The Fund is more subject to credit risk than a fund that invests primarily in investment-grade municipal bonds. Economic exposure to the municipal bond market involves certain risks. The Fund’s economic exposure to municipal bonds includes municipal bonds in the Fund’s portfolio and municipal bonds to which the Fund is exposed through the ownership of Tender Option Bond (“TOB”) Residuals. Tender Option Bonds (TOBs) are derivative municipal securities that have embedded in them the risk of economic leverage. There is no assurance that the Fund’s strategy of using TOB Residuals to leverage its assets will be successful. A portion of the Fund’s distributions may be taxable. Some investors may be subject to Alternative Minimum Tax. The Fund’s limited term may cause it to sell securities when it otherwise would not, which could cause the Fund’s returns to decrease and the market price of the Common Shares to fall.
