Returns represent past performance which is no guarantee of future results. Current performance may be lower or higher. Investment return and principal value will fluctuate, and shares, when redeemed, may be worth more or less than their original cost. Performance reflects a contractual fee waiver and/or expense limitation agreement in effect until terminated by the board of Trustees of the ETF, without which total returns may have been lower. Shares are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Total Returns are calculated using the daily 4:00 pm ET net asset value (NAV). The price used to calculate the market price returns ("MP") is the mean between the day's last bid and ask prices on the fund's primary exchange. The market price returns do not represent returns an investor would receive if shares were traded at other times.

Index performance is for illustrative purposes only and does not represent actual Fund performance. One cannot invest directly in an index. Performance data for the Index assumes reinvestment of dividends and is net of the management fees for the Index's components, as applicable, but it does not reflect management fees, transaction costs or other expenses that you would pay if you invested in the Fund directly. No representation is being made that any investment will achieve performance similar to that shown.

Percentages are based on fixed-income securities held in the Fund's investment portfolio and exclude any equity or convertible securities and cash or cash equivalents. Ratings apply to the underlying portfolio of debt securities held by the Fund and are rated by an independent rating agency, such as Standard and Poor's, Moody's, and/or Fitch. If different ratings are assigned for the same security, the Fund will use the higher rating. If only one rating is provided, the available rating will be utilized. S&P rates borrowers on a scale from AAA to D. AAA through BBB represent investment grade, while BB through D represent non-investment grade.

### Before considering an investment in the Fund, you should understand that you could lose money.

The Fund may be susceptible to an increased risk of loss, including losses due to adverse events that affect the Fund's investments more than the market as a whole, to the extent that the Fund's investments are concentrated in the securities of a particular issuer or issuers, region, market, industry, group of industries, project types, group of project types, sector or asset class. Municipal Bond risks include the ability of the issuer to repay the obligation, the relative lack of information about certain issuers, and the possibility of future tax and legislative changes, which could affect the market for and value of municipal securities. Fixed income securities most frequently trade in institutional round lot size transactions. Until the Fund grows significantly in size, the Fund expects to purchase a significant number of bonds in amounts less than the institutional round lot size, which are frequently referred to as "odd" lots. Odd lot size positions may have more price volatility than institutional round lot size positions. Insured Municipal Bonds are covered by insurance policies that guarantee the timely payment of principal and interest. The insurance does not guarantee the market value of an insured security, or the Fund's share price or distributions, and shares of the Fund are not insured. The Fund may purchase insurance for an uninsured bond directly from a qualified Municipal Bond insurer. The supply of insured municipal securities which meet the Fund's investment guidelines is limited. A portion of the Fund's income may be subject to state and local taxes or the alternative minimum tax. Funds that invest in bonds are subject to interest-rate risk and can lose principal value when interest rates rise. Bonds are also subject to credit risk, in which the bond issuer may fail to pay interest and principal in a timely manner. Municipal bond risks include the ability of the issuer to repay the obligation, the relative lack of information about certain issuers, and the possibility of future tax and legislative changes, which could affect the market for and value of municipal securities. The Bloomberg Municipal All Insured Bond Index is a total return performance benchmark for municipal bonds that are backed by insurers with Aaa/AAA ratings and have maturities of at least one year. Index results assume the reinvestment of all capital gain and dividend distributions. An investment cannot be made directly into an index.

**1.** Percentages based on total net assets and subject to change without notice. **2. Annual Turnover Rate** measures how quickly securities in the Fund are either bought or sold during the 12 months as of the most recent annual shareholder report. **Duration to Worst** is the duration of a bond, computed using the bond's nearest call date or maturity, whichever comes first. This measure ignores future cash flow fluctuations due to embedded optionality. **Final Maturity** is the amount of time until the bond matures.
