

Investment Idea: MainStay MacKay Short Duration High Yield Fund

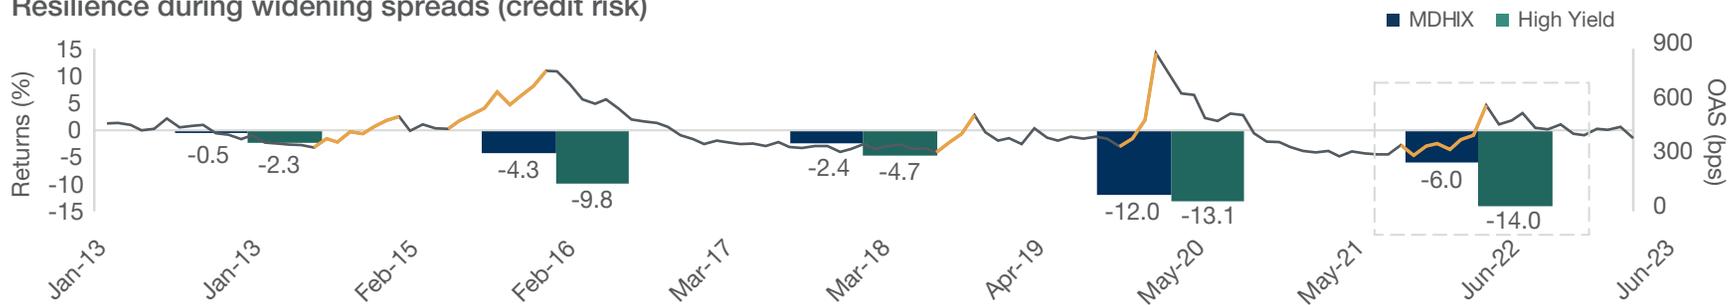

Given its attractive risk profile and appealing results under various market conditions, MDHIX may be considered an **'all-weather solution'** for high yield investing. In fact, MDHIX has outperformed core bonds when rates have risen and has shown increased resiliency versus high yield when spreads have widened.

The Fund has performed relatively well during periods of increased risk.

Outperformance during rising rates (interest rate risk)

Resilience during widening spreads (credit risk)

Source: Morningstar, as of 6/30/23. Chart created by NYLIM. Core Bonds is represented by Bloomberg U.S. Aggregate Bond Index; High Yield is represented by the ICE BofA U.S. High Yield Constrained Index; Rates are 10-year U.S. Treasury Rates; Spread is represented by ICE BofA U.S. High Yield OAS Spread. It is not possible to invest in an index. **Returns represent past performance which is no guarantee of future results. Current performance may be lower or higher. Investment return and principal value will fluctuate, and shares, when redeemed, may be worth more or less than their original cost.**

Positive returns nine out of ten calendar years since inception

Source: Morningstar and ICE Bank of America, as of 12/31/22. High Yield is represented by ICE BofA U.S. High Yield Constrained Index; Spread is represented by ICE BofA U.S. High Yield OAS Spread. Past performance is no guarantee of future results, which will vary. It is not possible to invest in an index. Different time periods may have different results.

Before You Invest

Before considering an investment in the Fund, you should understand that you could lose money.

There is no assurance that the fund's investment objectives will be met. The Fund is not a money market fund and does not attempt to maintain a stable NAV. The Fund's net asset value per share will fluctuate. Investing in below investment grade securities may carry a greater risk of nonpayment of interest or principal than higher-rated bonds. Foreign securities are subject to interest rate, currency exchange rate, economic, and political risks. These risks may be greater for emerging markets.

Floating rate loans are generally considered to have speculative characteristics that involve default risk of principal and interest, collateral impairment, borrower industry concentration, and limited liquidity. Issuers of convertible securities may not be as financially strong as those issuing securities with higher credit ratings and are more vulnerable to changes in the economy. The Fund may invest in derivatives, which may increase the volatility of the Fund's NAV. Funds that invest in bonds are subject to interest-rate risk and can lose principal value when interest rates rise. Bonds are also subject to credit risk, in which the bond issuer may fail to pay interest and principal in a timely manner, or that negative perception of the issuer's ability to make such payments may cause the price of that bond to decline.

The ICE BofA 1-5 Y BB-B Cash Pay HY Index tracks the performance of BB-B rated U.S. dollar-denominated corporate bonds publicly issued in the U.S. domestic market with maturities of 1 to 5 years. ICE BofA U.S. High Yield Constrained Index tracks the performance of U.S. dollar-denominated below investment grade corporate debt publicly issued in the U.S. domestic market. The Bloomberg Barclays U.S. Aggregate Bond Index is a broad-based benchmark that measures the investment-grade, U.S. dollar-denominated, fixed-rate taxable bond market, including Treasuries, government-related and corporate securities, mortgage-backed securities (agency fixed-rate and hybrid adjustable-rate mortgage pass-throughs), asset-backed securities, and commercial mortgage-backed securities.

Class I shares are generally only available to corporate and institutional investors.
